广东东方精工科技股份有限公司

英文年报披露说明

近年来中国资本市场持续加大对外开放力度,鼓励境外投资者更多参与,东方精工科技股份有限公司(以下简称"公司")为更好地服务越来越多的境外投资者,让境外投资者更 便捷地获取公司经营与财务等方面信息,同时也更充分地向境外投资者传递公司的投资价值, 提升公司国际化水平,公司发布披露《2019年年度报告》的英文版本。

本次英文版年报翻译中,涉及众多瓦楞包装机械行业和财会方面的专业术语。虽然公司 已尽力确保原文内容得到准确的转译,但仍可能会存在不恰当之处。公司在此声明:如果您 在阅读《2019年年度报告》的中文、英文文本的过程中,在对文本的理解上发生歧义时,以 中文文本为准。

In recent years, China's capital market continues to open to the outside world and encouraged foreign investors to participate in the financial market of China. Guangdong Dongfang Precision Science & Technology Co., Ltd. (hereinafter referred to as "the company") discloses its 2019 Annual Report in English for the first time, that we believe can enables for foreign investors to obtain information about the company's operation and finance more conveniently, and fully convey the investment value of the company to them, and at the same time help continuously improving the company's international level.

As the annual report involves many professional terms translation of Corrugated packaging machinery industry and financial accounting, the company has made great efforts to ensure the accurate translation of the original content, but there may still be some inadequacies.

The company hereby declares that in case of any ambiguity in your understanding of the Chinese version and English version of the 2019 annual report, the Chinese version shall prevail.

Guangdong Dongfang Precision Science&Technology Co.,Ltd.

2019 Annual Report

April 2020

Section 1 Important Notes, Table of contents and Interpretation

The company's board of directors, board of supervisors, directors, supervisors, and senior management ensure that the contents of the annual report are true, accurate, and complete, that there are no false records, misleading statements, or major omissions, and if there are any, we shall bear individual and joint legal responsibilities.

Tang Zhuolin, person in charge of the company, Qiu Yezhi, chief in charge of accounting work, and Qiu Yezhi, head of accounting institution (accounting officer) hereby confirm that the financial report in the annual report is true, accurate and complete.

Apart from the following director, other directors attended the board meeting to review this annual report in person.

| The name of director who did not attend in person | who did not attend in | Reasons for not attending the meeting in person | |
|---|-----------------------|---|-------------|
| Peng Xiaowei | Independent Director | To take care of his own work | Mai Zhirong |

The forward-looking statements such as the prediction of future operating performance involved in this annual report are all planned matters of the company and do not constitute a substantial commitment of the company to investors. There are certain uncertainties. Investors are advised to pay attention to investment risks.

The relevant risks that may exist in the company's operation and development are described in detail in "4.The risks that the company may face in the development process" in "IX. Prospects for the company's future development" in Section 4 "Discussion and Analysis of Business Situation" of this report. Investors are advised to read this part.

The company plans not to distribute cash dividends, neither give away bonus shares, nor capitalize from public reserve.

| Corrugated box | Refers to | Corrugated cardboard is made into corrugated boxes by printing, grooving, die-cutting and sticking boxes; corrugated boxes are the most widely used packaging products. |
| Corrugated box printing complete production line | | A complete set of corrugated paper box printing machinery equipment that integrates all or part of the functions of leading edge paper feeding, printing, grooving, die cutting, and forming. It has the characteristics of highly integrated functions, high automation level, and intensive technology. It can save capital investment, manual investment, reduce labor intensity and increase production efficiency of carton production enterprises. This type of product has strong requirements on equipment manufacturers' design level, scientific research and innovation capabilities, assembly technology, and spare parts finishing. |
| Corrugated board production line | Refers to | The roll base paper goes through a production line consisting of corrugating, gluing, bonding, paper-dividing and lining, and cutting into specification paperboard. It is mainly composed of two relatively independent process sections: wet-end equipment and dry-end equipment. |

| Outboard motor | Refers to | Refers to the propulsion engine installed on the outside of the hull (side of the ship), usually suspended on the outside of the transom, also known as the outboard engine. |

VI. Main Accounting Data and Financial Indicators

Does the company need to retroactively adjust or restate previous year's accounting data

 $\Box \ YES \ \sqrt{NO}$

| | 2019 | 2018 | Increase or decrease bythan the previous year | 2017 |
|-------------------------|------------------|------------------|---|------------------|
| Operating income (yuan) | 9,973,503,602.19 | 6,621,349,618.40 | 50.63% | 4,684,845,398.24 |

| Net profit attributable to shareholders of listed companies (yuan) | | -3,875,995,219.91 | 147.42% | 490,498,337.12 | |
|--|------------------|-------------------|---|-------------------|--|
| Net profit attributable to shareholders of listed companies after deducting non-recurring gains and losses (yuan) | 438,715,870.86 | -3,905,407,016.45 | 111.23% | 353,115,982.47 | |
| Net cash flow from operating activities (yuan) | 281,297,787.01 | 721,724,801.12 | -61.02% | -95,224,885.04 | |
| Basic earnings per share (yuan / share) | 1.01 | -2.11 | 147.87% | 0.31 | |
| Diluted earnings per share (yuan / share) | 1.01 | -2.11 | 147.87% | 0.31 | |
| Weighted average return on net assets | 36.87% | -67.71% | 104.59% | 8.85% | |
| | End of 2019 | End of 2018 | Increase or decrease bythan the previous year | End of 2017 | |
| Total assets (yuan) | 6,273,516,157.31 | 8,986,973,675.89 | -30.19% | 12,437,799,208.64 | |
| Net assets attributable to shareholders of listed companies (yuan) | | 4,026,565,236.20 | 7.71% | 7,670,809,269.32 | |

VII. Differences in accounting data under domestic and foreign accounting standards

1. The difference between net profit and net assets in financial reports disclosed in accordance with international accounting standards and in accordance with Chinese accounting standards at the same time

 \Box Applicable $\sqrt{}$ Not applicable

During the reporting period, there was no discrepancy between the net profit and net assets in the financial reports disclosed in accordance with international accounting standards and in accordance with Chinese accounting standards.

2. The difference between net profit and net assets in financial reports disclosed in accordance with overseas accounting standards and in accordance with Chinese accounting standards at the same time

 \Box Applicable $\sqrt{\text{Not applicable}}$

There was no discrepancy between the net profit and net assets in the financial report disclosed in accordance with overseas accounting standards and in accordance with Chinese accounting standards during the reporting period.

VIII. Major financial indicators by quarter

Unit: yuan

| | Q1 | Q2 | Q3 | Q4 |
|---|------------------|------------------|------------------|-------------------|
| Operating income | 1,199,609,998.96 | 3,191,739,295.93 | 3,360,816,595.53 | 2,221,337,711.77 |
| Net profit attributable to shareholders of listed companies | 26,225,836.51 | 156,165,299.88 | 212,791,166.02 | 1,442,836,503.09 |
| Net profit attributable to shareholders of listed companies after deducting non-recurring gains and losses | 23,381,604.22 | 142,773,952.59 | 198,631,530.02 | 73,928,784.03 |
| Net cash flow from operating activities | | 999,613,550.00 | 101,010,721.08 | -1,238,953,686.04 |

Whether the above financial indicators or their totals are significantly different from the financial indicators disclosed in the company's quarterly and semi-annual reports

 \square Yes \sqrt{No}

IX. Non-recurring items and amounts

 \checkmark Applicable \square Not applicable

Unit: yuan

| Item | 2019 amount | 2018 amount | 2017 amount | Explanation |
|--|------------------|---------------|---------------|--|
| Gains and losses from disposal of non-current assets (including write-offs of asset impairment provisions) | -95,745,648.97 | 1,792,860.48 | 95,244,311.61 | Mainly to deal with the profit and loss of 100% equity of Pride |
| Government subsidies included in the current profit and loss (closely related to the business of the enterprise, except for government subsidies that are fixed or quantified according to the national unified standard) | 22,854,061.39 | 9,052,705.37 | 25,140,802.38 | For details, please refer to notes VII.46 and VII.52 of the financial report |
| In addition to the effective hedging business related to the company's normal business operations, holding transactional financial assets, derivative financial assets, transactional financial liabilities, fair value changes in derivative financial liabilities, and disposal of transactional financial assets and derivative financial investment income from assets, trading financial liabilities, | 1,473,114,508.83 | 24,082,095.44 | 13,705,471.69 | Mainly for the performance compensation of Pride's original shareholders and bank wealth management income |

| derivative financial liabilities and other debt investments | | | | |
|--|------------------|---------------|----------------|--|
| Other non-operating income and expenses other than the above | 9,007,522.57 | 890,902.50 | 31,772,720.83 | |
| Deduct: the amount of income tax impact | 9,881,032.32 | 6,371,800.11 | 28,467,463.96 | |
| Minority shareholders' equity impact (after tax) | 46,476.86 | 34,967.14 | 13,487.90 | |
| In total | 1,399,302,934.64 | 29,411,796.54 | 137,382,354.65 | |

For the company's non-recurring gains and losses items defined by the "Announcement No. 1 of Information Disclosure by Companies Offering Securities to the Public — Non-recurring Gains and Losses" and the non-recurring gains and losses items defined by "Announcement No. 1 of Information Disclosure by Companies Offering Securities to the Public —Non-recurring Gains and Losses" as recurring gains and losses, the reasons should be explained

\Box Applicable $\sqrt{\text{Not applicable}}$

During the reporting period of the company, there were no situations in which the non-recurring gains and losses items listed in accordance with the definition of "Announcement No. 1 of Information Disclosure by Companies Offering Securities to the Public — Non-recurring Gains and Losses" were defined and listed as recurring gains and losses.

Section 3 Company Business Overview

I. The main business of the company during the reporting period

The current global economic system is facing profound changes and reconstruction. The new generation of information technology is showing explosive growth. Emerging technologies represented by cloud computing, big data, artificial intelligence and 5G communication technology are booming. Manufacturing and the new generation of information technology witnesses deep integration, and a new round of industrial revolution is being conceived.

Intelligent manufacturing based on the deep integration of new generation information communication technology and advanced manufacturing technology runs through the design, production, management and service of manufacturing activities. Its technology includes automation, informatization, Internet and intelligence.

The "Made in China 2025" issued by the State Council indicates that it will focus on implementing the strategy of making China a manufacturing power, and intelligent manufacturing is the top priority. Smart manufacturing-related industries will not only become key industries supported and developed by China, but also be the backbone of China's economic transformation and upgrading, innovative development, and the realization of building China a "manufacturing power". With its superior geographic location, strong national support and strong manufacturing base, Guangdong Province has great advantages in the transformation and upgrading of manufacturing industries and the implementation of intelligent manufacturing.

Dongfang Precision takes "smart manufacturing" as its strategic vision and business core, and is one of the earliest companies engaged in R&D, design and production of intelligent corrugated carton packaging equipment in China. Since its listing in 2011, the company has used the capital market to expand the industry chain of corrugated box packaging equipment. At present, it has become a leading domestic and international leading supplier of intelligent corrugated box packaging equipment. In 2019, the company carried out various business activities around the core smart corrugated box packaging equipment business and the annual business plan. The layout and

operation of the main business sectors are as follows:

1. Smart packaging equipment business

During the reporting period, the company's business of intelligent packaging equipment focused on the design, R & D, production, sales and service of "intelligent corrugated box packaging automation equipment and production lines". It has business entities focusing on the field of smart packaging equipment, such as Dongfang Precision (China), Dongfang Precision (Europe), Fosber Group, and Fosber Asia.

1.1 Main products and uses

As a typical midstream industry, the corrugated cardboard packaging industry uses corrugated cardboard base paper produced by upstream paper companies as raw materials to produce corrugated cardboard finished products, which are widely used in household appliances, electronic products, IT, food and beverage, books, daily chemical, textile and other downstream consumer industries and logistics express companies. Compared with metal, plastic, and glass packaging products, corrugated cardboard boxes are degradable, easy to recycle and reuse, and are recognized as "green packaging products".

Dongfang Precision is the earliest company engaged in the R&D, design and production of intelligent corrugated box packaging equipment in China. It provides high-tech content, high performance and high-quality cardboard production and printing and packaging equipment.

15 / 450

At present, the company has expanded from the corrugated box printing equipment in the initial stage of listing to three major product lines that can provide customers with high-end corrugated cardboard production lines, corrugated cardboard printing slotting die-cutting machines, and corrugated cardboard printing slotted sticking box linkage lines and the solution of the whole industrial chain equipment including pre-press and post-press intelligent automatic packaging equipment.

Schematic diagram of a corrugated carton packaging intelligent model factory

(1-10 are the company's existing products, 11 is the company's strategic expansion link)

The main products of the company's intelligent packaging equipment business include: corrugated cardboard production line, corrugated box printing complete production line, pre-press and post-press intelligent automation equipment (including multi-color complete printing slotting die-cutting machine, pre-feeder, waste conveying equipment, intelligent stack Stacking equipment, gluing equipment, etc.), as well as automated logistics systems.

1.1.1 Corrugated board production line

The company's complete production line for corrugated cardboard includes raw paper holders and splicing machines, single-sided machines, glue coating machines, double-sided machines, rotary

cutters, slitting and crimping machines, cross-cutting machines, stacking machines, production line intelligent management systems, and noise prevention units. The complete production line of corrugated cardboard is a large-scale automation equipment, and the average unit price of the entire production line ranges from 30 million to 60 million yuan (3.5 million to 7.5 million euros).

The company's corrugated board production line is positioned at the high end, and it is superior to domestic counterparts in terms of speed, width, energy saving, safety, and operation automation, and has reached the world's leading level. The intelligent design and smooth linear process included in the company's products can effectively reduce labor costs for downstream corrugated board manufacturers, greatly improve production efficiency, reduce management pressure, and improve business efficiency.

The company's corrugated board production line business is facing the global market. The company develops, produces and sells corresponding products for the performance requirements of different customers in the Asian, European and American markets.

Schematic diagram of the company's corrugated board production line

1.1.2 Complete production line for corrugated box printing

The company's corrugated box printing complete production line products include corrugated box printing linkage line, printing stand-alone products, and intelligent automatic equipment before and after printing.

Corrugated box printing linkage line is divided into sticking box linkage line and fully automatic printing linkage line according to the linkage of pre-press and post-press automation equipment.

The average selling price of the company's corrugated box printing complete production line is 4 million to 15 million yuan. At present, the company develops and produces two series of production and sales for different customers in Asia, Europe, and the United States. Corrugated carton printing complete production line equipment, including: Asia-Pacific Star Series (APSTAR), mainly $\frac{17}{450}$

exported to Europe and the United States and other developed markets; TOPRA series (TOPRA), mainly for domestic large and medium-sized group customers or listed companies. At present, the company's printing equipment business revenue is basically the same in domestic and overseas markets.

Schematic diagram of the company's printing equipment stand-alone products

Schematic diagram of the company's up-printing fixed sticky box linkage line (left)

and down-printing open and closed sticky box linkage line (right)

Schematic diagram of the company's down-printing automatic printing linkage line product

The company's two series of products have the characteristics of leading design concepts, highly integrated functions, higher automation, less manpower investment, lower labor intensity, energy saving and environmental protection, etc. They have obvious competitive advantages in the aspects of printing quality, printing efficiency, overprint accuracy, printing width and other overall performance and product cost performance.

The company's complete production line for corrugated box printing is exported to more than 30 countries and regions in Europe, America, Southeast Asia and India. At present, the company has become a high-profile corrugated box printing equipment manufacturer in the global market and China.

1.2 Main business model

1.2.1 Business model summary

Dongfang Precision's intelligent packaging equipment business adopts the "design and development + production + sales + service one-stop" business model, and implements "differentiated" operation and service-oriented manufacturing.

Fosber Group, Fosber Asia's corrugated board production line business under Dongfang Precision, and corrugated box printing equipment business of Dongfang Precision (China) and Dongfang Precision (Europe), all have mastered the core technology of the product, have the product design and R&D strength, and have the production capacity to meet sales demand.

In terms of "differentiated" operation, on the one hand, the company's corrugated board production line business and corrugated box printing complete production line business are positioned at the mid-to-high end, and the market is oriented to large and medium-sized customers. The product has high technical content, high intelligence, stable quality and good reliability; On the one hand, the company provides high-quality after-sales services to customers through professional technical teams, spare parts preparation, remote monitoring, and technical support, and uses services to empower manufacturing.

The company has been working hard in the industry for many years. Both the Fosber corrugated cardboard production line brand and Dongfang Precision corrugated box printing equipment brand have high visibility and brand influence in the industry, which helps the company obtain a premium for brands, products and services from the market.

1.2.2 Procurement model

The company mainly purchases electrical components, standard parts, raw materials and auxiliary materials from external suppliers; the core machining parts are produced by the company itself; the equipment automation control program is developed by the company itself.

1.2.3 Production model

The company adopts 90% of orders to organize production according to customer orders and 10% according to market forecast orders. Through the combination of the two production modes, the company can not only better meet the customer's order needs, but also adjust the production rhythm through reasonable warehouse regulation to ensure that the company can respond in a timely manner and meet customer needs.

1.2.4 Sales model

The company mainly adopts the direct sales model in the domestic market, and adopts the direct sales plus channel agent sales model in the foreign market to carry out business sales.

From the perspective of payment and settlement methods, the company is a professional equipment supplier and has a high brand awareness in the industry. Both domestic and foreign corrugated box printing equipment sales adopts the payment and settlement method of the customer first prepay, pay another part when delivery, and pay for the remaining part after installation and commissioning.

From the perspective of product form, the company simultaneously sells the whole machine and the sales of accessories and services, each of which has its own value. The whole machine is a one-time sale with a large single amount; accessories and services can be sold repeatedly in the life cycle of $\frac{20}{450}$

the whole machine, with a higher gross profit margin. The increasing market share of the company's machine products has led to a rigid increase in the demand for accessories and services; at the same time, high-quality after-sales service in turn promotes the sales of machine products. The two complement each other and achieve mutual success, driving the continuous growth of the company's overall business.

1.3 Key performance drivers

The downstream industry of the company's smart packaging equipment business has provided strong support for the corrugated box production industry. In turn, the growth of corrugated box production and consumption has provided strong support for the demand for smart corrugated box packaging equipment.

With the rapid development of online shopping, express delivery and other industries, the continuous improvement of environmental standards, the international advocacy of circular economy (such as the domestic "plastic restriction order"), and the huge gap between the domestic per capita consumption of corrugated packaging and that of developed countries, the market demand for carton packaging products represented by corrugated carton packaging has steadily increased.

In recent years, China's demographic dividend has gradually disappeared, labor costs have continued to rise, and supply-side reforms, environmental protection, production limits, industrial

upgrades, and centralized industrial production capacity have gradually become the trend. The production equipment of the downstream paper product printing and packaging industry has a large demand for upgrading to middle and high-end intelligent corrugated box packaging equipment. In both the domestic market and the emerging markets at home and abroad, there is a considerable demand for upgrading of existing equipment and incremental equipment. In addition, with the expansion of the company's operating scale, the stock of equipment sold by the company in the market has increased, and the customer's demand for equipment spare parts and technical support is increasing. At the same time, as the proportion of spare parts sales and technical support services in the company's business structure increases, its higher gross profit margin will drive the company's overall gross profit margin.

The downstream industry's continuous upgrade demand for smart packaging equipment, incremental demand in emerging markets, customer demand for spare parts and technical support, after-sales service and the resulting increase in the company's overall profitability have become the main driver of business growth for the company's smart packaging equipment.

2. Outboard motor business

The main body of the company's outboard motor business is Parsun Power. Parsun Power is a high-tech enterprise focused on providing high-quality, cost-effective water power products for the global market, and is currently the largest manufacturer of outboard motor products in China.

2.1 Main products and uses

Parsun Power's main products are outboard motors, which mainly include four-stroke, two-stroke, electric and special-purpose water-jet propulsion outboard motors. There are currently more than 20 categories and more than 200 models, of which four-stroke covers 2.6 horsepower -115 horsepower, two strokes cover a full range of 2hp-90hp outboard motors. It is the manufacturer with the most complete models and the largest power range among domestic brands. Some models have maturely used EFI technology, and the product performance indicators have reached the international advanced level and can meet the needs of high-end customers in Europe and America. In addition, Parsun Power continues to develop new products with higher horsepower outboard motors, so as to break the monopoly of foreign outboard motors on medium-horsepower outboard motors.

All outboard motor products of Parsun Power are independently developed. The company has passed the ISO9001 quality management system certification and ISO14001 environmental management system certification. The products have passed the EU CE certification, the US EPA certification, and the CCS certification of the authoritative unit China Classification Society. The company is also the first drafting unit of the domestic outboard engine industry standard "Technical Conditions for Outboard Engine Gasoline Engines" (JB/T11875-2014).

Outboard motors can be widely used in leisure and entertainment industries (yachts, speedboats, etc.), maritime patrols (patrol boats, etc.), military uses (assault boats, landing craft), fishing, and water transportation.

Schematic diagram of outboard motor products

2.2 Main business model

Parsun Power's outboard motor business adopts the "design R&D + production + sales" business model, and implements a "differentiation + cost-leading" business strategy, and adopts a direct sales plus channel agent sales model to carry out business sales.

Parsun Power can independently develop and produce various types of outboard motor products, and focus on small and medium horsepower outboard motor products. At the same time, it can make full use of the domestic perfect manufacturing industry chain and its own production experience to provide customers with cost-effective water power products to seize the market.

2.3 Key performance drivers

With economic development and growth in per capita income, emerging markets such as Asia, Africa, Oceania, and Latin America (especially China) will gradually become the main incremental markets for outboard motors and their applications. In addition, various specialized markets (such as emergency rescue, military) also have considerable market potential in the future.

The continued growth in the demand for outboard motors and downstream watercraft in emerging markets and specialized markets is the main performance driver of Parsun Power's main business development.

3. Automotive core parts business

During the reporting period, the company's core auto parts segment focused on new energy vehicle power battery systems, and its main business was Pride. Pride specializes in the design, development, production, sales and service of new energy vehicle power battery pack systems, and is committed to providing new energy vehicle manufacturers with integrated power battery solutions.

The company sold 100% equity of Pride in December 2019, and will no longer operate the new energy vehicle power battery system business.

3.1 Main products and uses

Pride's main products are power battery pack products, which are used in various types of new energy vehicles such as passenger cars and commercial vehicles. In addition, the power battery pack can also be used in fields such as energy storage and step utilization.

3.2 Main business model

Pride's power battery pack business adopts the "R&D + production + sales" business model.

Pride itself has certain Pack design and R&D capabilities, and can support different models and different types of models from the OEM to provide corresponding Pack products.

As for the production mode, Pride, as a third-party Pack manufacturer, does not produce batteries itself, and all rely on outsourcing. Its own production mode focuses on the module design, assembly and integration of Pack products.

The sales model mainly adopts the direct management model.

II. Major changes in major assets

1.Major changes in main assets

| Main assets | Major changes |
|--------------------------|---|
| Equity assets | The balance of long-term equity investment decreased by 9.28% compared with the end of last year, mainly due to the acquisition of 70% equity of Tiruna Group, and the joint venture company Tiruna USA was included in the merger. |
| Fixed assets | The balance of fixed assets decreased by 14.52% compared with the end of last year, which was mainly due to the disposal of 100% equity of Pride. |
| Intangible assets | The balance of intangible assets decreased by 26.73% compared with the end of last year, mainly due to the disposal of 100% equity of Pride. |
| Construction in progress | The balance of construction in progress decreased by 53.82% from the end of last year, which was mainly due to the reduction of construction in progress caused by the disposal of 100% equity of Pride, and the completion of the office decoration project carried forward this year. |
| Trading financial assets | Trading financial assets increased by 100% compared with the end of last year, mainly due to the purchase of bank wealth management products at the end of the year. |
| bill receivable | The balance of bill receivable decreased by 100% compared with the end of last year, which was mainly due to the disposal of 100% equity of Pride and the reclassification of the balance of bill receivable to receivable financing. |
| Receivable financing | The balance of receivable financing increased by 100% compared with the end of last year, mainly due to the reclassification of the balance of bills receivable to receivable financing. |
| accounts receivable | The balance of accounts receivable decreased by 60.07% from the end of last year, which |

| | was mainly due to the disposal of 100% equity of Pride. |
|----------------------|---|
| stock | The inventory balance decreased by 28.25% from the end of last year, mainly due to the disposal of 100% equity of Pride. |
| Other current assets | The balance of other current assets decreased by 59.10% compared with the end of last year, mainly due to the disposal of 100% equity of Pride. |
| Goodwill | The balance of goodwill decreased by 54.25% compared with the end of last year, which was mainly due to the disposal of 100% equity of Pride to reduce goodwill and the provision of goodwill impairment provision for EDF. |
| Deferred tax assets | The balance of deferred income tax assets decreased by 58.86% from the end of last year, mainly due to the disposal of 100% equity of Pride. |

2. Main overseas assets

 \checkmark Applicable \Box Not applicable

| Asset specific content | Cause of formation | Asset size | Location | Operating model | Control measures to ensure asset security | Income status | The proportion of overseas assets in the company's net assets | Whether there is a significant risk of impairment |
|--|---------------------|----------------------|----------|---|--|---------------|--|---|
| Holds 100% equity of Fosber S.p.A. | M & A investment | 1,239,337,57 2.33 | Italy | market all by | Operation management | good | 10.10% | No |
| Holds 100% equity of EDF S.R.L | M & A | 173,485,999. 38 | Italy | produce and market all by oneself | - | general | 0.96% | No |

III.Analysis of core competitiveness

1. Comprehensive industrial chain layout, providing overall solutions

Dongfang Precision is one of the global leaders in the field of intelligent corrugated box packaging equipment. It has a full industry chain layout within the industry and has the ability to provide high-end intelligent corrugated box packaging equipment solutions.

Dongfang Precsion undertakes corrugated board production line and unit equipment business through its subsidiaries Fosber Group, Fosber Asia and Fosber Group's holding subsidiary Tiruna Group; undertakes corrugated box printing complete production line business through Dongfang Precsion (China) and Dongfang Precsion (Europe); through joint stock company Jiateng Robot to lay out an automated logistics system business.

Schematic diagram of the overall solution of the company's intelligent corrugated packaging equipment

1.1 Medium and high-end printing equipment has been deeply cultivated for many years, with complete product types and specifications

As the main business of Dongfang Precision when it went public, the corrugated box printing complete production line is the cornerstone of the company's business development. After more than 20 years of hard work, the company has continuously carried out independent innovations on mid-to-high-end corrugated box packaging equipment, and has continuously upgraded, expanded, and extended products and can be able to meet the extensive needs of customers in the global market.

Other competing companies are not capable of designing and producing products in some links. International peer companies can provide lower-print products suitable for markets in Europe, America, and Japan, but basically no upper-print products suitable for Asian markets.

In addition, like Dongfang Precision, the Swiss Bobst company also has the ability to provide major 27/450

products in the industrial chain, but its specifications and quantity in each type of product are not as complete as Dongfang Precision products. Taking the product specifications of the above printer as an example, Dongfang Precision can provide 26 different sizes of machine products, while Bobst can only provide 2 specifications.

The above-mentioned product advantages of Dongfang Precision are the result of the company's hard work and aggressiveness in the industry over the years. It is difficult for other competitors to copy and build in the short term. It is one of the core competitive advantages of Dongfang Precision.

1.2 Entering high-end corrugated cardboard production line and its components, efficiently integrated with Fosber Group's overseas mergers and acquisitions

In March 2014 and September 2017, Dongfang Precision acquired 60% and 40% shares of Fosber Group, respectively, and entered the field of high-end corrugated board production lines. Fosber Group's products are mainly sold to Europe, the United States, and Asia and other countries. It is the world's top two brands in the corrugated board production line industry.

In 2014, Dongfang Precision and the original shareholders of Fosber Group jointly invested to set up a joint venture Fosber Asia in Foshan City, Guangdong Province. Its main business is mid-to-high-end corrugated board production lines, mainly for Asian markets, especially China and India. Fosber Asia's R&D team completed the drawing design of the entire corrugated board production line in a short period of time through continuous on-site learning and communication at Fosber Group, and made special designs and adjustments to meet the needs of customers in the Asian market to achieve localization. The new product was launched on the market in 2017 and has been highly recognized by customers.

The overseas M&A model of "acquisition + joint ventures" has realized the localization and effective transfer of overseas high-quality technological assets, which is an important manifestation of Dongfang Precision's strategic thinking and an effective method to promote the transformation and upgrading of China's industries.

At the same time, in order to further improve the company's "smart packaging equipment" industry chain layout, at the end of May 2019, Fosber Group completed the acquisition of 70% of the $\frac{28}{450}$

corrugated roll supplier Tiruna Group. The amount of the merger and acquisition transaction was approximately 16.1 million euros, which did not meet the information disclosure standards stipulated in the "Shenzhen Stock Exchange Stock Listing Rules", and the company has performed the necessary internal approval procedures for the merger and acquisition.

Tiruna Group is a company with a long history and specialized in providing corrugated rollers, pressure rollers and other key core components for the corrugated equipment industry. It has production bases in Europe and the United States and is the second largest corrugated roller supplier in the world. Tiruna Group and Fosber Group have decades of strategic partnership. Through this acquisition, the Fosber Group further strengthened its cooperation with the Tiruna Group, so that the supply of key components for its corrugated board production line business was firmly guaranteed.

1.3 Deepen the global R&D layout, research and upgrade the high-end corrugated box printing complete production line

In July 2016, the company completed the acquisition of 100% equity of EDF in Italy, and adjusted the company's position within the group, renamed it as Dongfang Precision (Europe), and used it as the research and development of Dongfang Precision high-end corrugated box printing complete production line in Europe And production base, not only realize the research and development and upgrade of the company's existing printing equipment series products, but also realize the research and development and production of high-end models in Europe, further drive the company's global sales of products, practice the company's positioning in the high-end market, and look at the international Development strategy for a global layout and balanced allocation of global assets.

1.4 Equity participation in Jiateng robot to layout intelligent logistics, "packaging-intelligent logistics" integration is ready to go

In July 2014, the company acquired a 20% stake in Jiateng Robot, and deployed in the field of intelligent logistics. After years of resource integration and R&D support, the company has accumulated more experience and strength in the field of "package-intelligent logistics" integrated solutions. As downstream customers' demand for subsequent logistics automation equipment for printing equipment production lines increases, the company's advantage in the layout of smart

logistics in advance will gradually emerge.

2. Efficient and reliable, intelligent leading products, promote the transformation of intelligent manufacturing

The company's intelligent packaging business segment's corrugated box printing complete production line has leading design concepts, highly integrated functions, high degree of automation, and advanced overall performance. Leading competitors in terms of overall performance and product cost performance such as operating stability and life, printing quality, printing efficiency, overprint accuracy, and printing width.

At the same time, the company independently develops a production management system embedded in the corrugated box printing complete production line, links with the customer's ERP system, performs intelligent automated order and production management on the corrugated box printing, and fully improves the production efficiency of customers. After years of practice and iterative updates, the system has mature functions and is currently sold separately as a company's featured product.

The company's automatic corrugated box printing complete production line greatly saves labor costs

Fosber Group, a subsidiary of the company's Intelligent Packaging Equipment segment, focuses on corrugated cardboard production lines and equipment. It is an important high-end corrugated cardboard production line manufacturer in the European and American markets. It is one of the 30/450

world's two largest companies in the field of high-speed wide-width corrugated cardboard production lines. Its simple equipment design, stable performance, low failure rate, and high degree of intelligence reflect the characteristics of its equipment design leadership, high degree of mechanical and electrical integration, energy saving and environmental protection, and is in a leading position in the industry in Europe and North America.

At the same time, Fosber Group actively promotes the upgrade of smart manufacturing. Its corrugated cardboard production line has a brain that collects and analyzes data, and can solve problems autonomously through algorithms like human brains and continuously learn.

Pro-Syncro, which is embedded in the corrugated cardboard production line by Fosber Group, is the core control system of the production line, and can interact with highly automated equipment units. Through more than 200 various sensors installed on the corrugated cardboard production line, it monitors and collects the production data of the entire line in real time. According to the collected real-time data and the designed parameter settings, the equipment automatically makes necessary adjustments; Each client in the laboratory computer or production line issues instructions to control the target equipment to make corresponding adjustments. According to the production data collected in real time and the setting of the program algorithm, the machine can identify abnormal production data in real time and make a diagnosis, and immediately, the system automatically realizes the alarm. In addition, the system will predict and provide corresponding solutions to the development of the problem. At the same time, Fosber Group's remote technical support team Pro team continuously solves problems and provides corresponding solutions to the system. Supported by the accumulation of a large number of cases and data, the system can realize intelligent identification, intelligent diagnosis, intelligent correction and self-learning.

Fosber Group corrugated board production line intelligent manufacturing application

related links and process diagram

3. Advanced after-sales service solutions to promote service manufacturing transformation

By combining traditional corrugated cardboard production equipment with advanced artificial intelligence, virtual reality, 3D simulation and other technologies, Fosber Group has developed intelligent systems such as Pro Care and Pro Syncro to realize the operation of the entire production line and individual equipment Intelligent monitoring and control. Based on the application of intelligent manufacturing in the corrugated cardboard production line, Fosber Group realizes intelligent diagnosis, automatic production planning and management equipment maintenance by automatically analyzing the collected machine operation data.

Fosber Group remotely helps customers monitor the running status of equipment and machines in real time. It can detect the operating parameters obtained through the remote control service before the customer finds the problem, detect and predict possible problems in advance, contact the customer in advance, and then provide customers with more efficient and better technical support services.

In order to ensure the timely and professional service, Fosber Group provides 24/7 telephone and remote technical support services, and has an expert team composed of mechanical engineers, electrical engineers and software development engineers, which provide comprehensive technical solutions accordance with customer requirements worldwide.

Schematic diagram of Fosber remote real-time monitoring system interface

For the high-tech and high-value corrugated board production line special equipment sold by Fosber Group, the service manufacturing model based on intelligent manufacturing is a very important and unique business model, which improves customer efficiency and experience while bringing an increase of added value of the company's products.

4. International brand competitiveness and industry influence

Dongfang Precision's intelligent packaging equipment products have considerable brand awareness and industry influence through its precise product positioning and stable product quality. Its Dongfang Precision corrugated box printing equipment, Fosber, Tiruna, etc., among which Dongfang Precision corrugated box printing equipment are domestic first-line brand in the industry, which enjoys a high reputation in the relevant global market; the Fosber brand is one of the leading brands in the global corrugated board production line industry; the Tiruna brand also has considerable visibility and influence in the corrugated roller segment.

The company's intelligent packaging equipment products are well-known in the industry for high performance, high stability and reliability. At the same time, the service-based manufacturing model based on intelligent manufacturing brings high-quality technical support and after-sales service to customers, allowing the company's products to obtain better brand premium.

5. High-quality customer resources and solid strategic cooperation relations help the company's sustainable development

Dongfang Precision's smart corrugated box packaging equipment business adheres to the market positioning for mid- to high-end customers. As the business model develops from a single product manufacturing to an integrated overall solution provider model, end customers have placed higher and stricter requirements on product quality, timeliness of delivery, and sustainability of long-term cooperation. The company continues to increase R & D and innovation efforts to improve the quality of products and services, so as to establish a long-term and stable strategic cooperative relationship with well-known domestic and foreign brands.

In the "smart packaging equipment" business area, the company focused on specialization, implemented solution delivery, and realized a differentiated competitive strategy, and established a close and stable cooperative partnership with major domestic and foreign customers and large groups such as Hexing Packaging, Hezhong Chuangya, Shanying Paper, Xintonglian, Shengda Packaging, Zhengye International, International Paper, Smurfit Kappa, Mpact, Modern, and Orora.

6. The management team with rich management experience and professional technical talent team lays the foundation for the stable development of the company

Dongfang Precision has an experienced management team with rich industry accumulation and a deep understanding of the company's product development, design, and manufacturing. The experienced and broad management team enables the company to have forward-looking deployments in the global economic operating cycle and the overall development trend of the intelligent packaging equipment manufacturing industry.

At the same time, Dongfang Precision is a company with standardized operation and stable operation. It has been strengthened through a variety of methods (including core senior management team building, organizational structure design, management and control system, financial management system, leadership, mid- and long-term incentives, corporate culture construction, etc.) The construction and upgrading of the company's organizational capabilities, continue to improve the management capabilities, resource integration capabilities of various functional departments and the ability to help subsidiaries' businesses, and improve the company's overall management and operational efficiency.

The company has established a sound long-term incentive and restraint mechanism. In order to fully

34 / 450
eliminate the negative impact of the Pride incident on the company, attract and retain excellent talents, and fully mobilize the enthusiasm of the company's senior management personnel and core technology and business backbone personnel, lay the foundation for the company's future healthy and sustainable development and improve the company's operating performance and value creation capabilities, the company launched its 2020 restricted stock incentive plan in March 2020. The incentive plan sets strict conditions for the realization of incentive income, and deeply binds the core backbone team's self-interest with the company's healthy and sustainable development, operating performance, and shareholder return in the next three years, thereby achieving the goal of the incentive plan to have a "stable team".

Section 4 Discussion and Analysis of Business Situation

I. Overview

In 2019, China's GDP growth rate reached 6.1%. The GDP growth rate remained within a reasonable range. The overall operation of the national economy was stable, progressed steadily, and the effects of economic structural transformation and upgrading showed. According to data from the National Bureau of Statistics, the cumulative growth rate of industrial added value in 2019 was 5.7% year-on-year, lower than 0.5 percentage points in 2018; the cumulative growth rate of manufacturing investment in 2019 was 3.1% year-on-year, a drop of 6.4 percentage points from 2018. Overall manufacturing investment slided at the beginning of the year to maintain a low volatility. Against the backdrop of the global economic slowdown leading to continued decline in external demand and continued decline in domestic demand due to debt structural problems, China's manufacturing industry is in a process of sustained low bottoming.

During the reporting period, facing the complex internal and external environment, under the leadership of the company's management, Dongfang Precision continued to insist on the business purpose of committed to becoming the world's leading provider of integrated solutions for intelligent packaging equipment and the supply of high-end core components, fully grasp the internal and external positive factors in the development process, with strong perseverance and determination to deal with the problems encountered in the development process, with a positive and pragmatic attitude to promote all aspects of work, keeping in mind the original intention and marching forward.

During the reporting period, the company's consolidated statements achieved a total operating income of about 9.974 billion yuan. After deducting the sold Pride from January to November 2019, it will be included in the consolidated range of about 7.106 billion yuan in revenue. It achieved operating income of approximately 2.868 billion yuan, a growth rate of approximately 20.64% compared to 2018, and achieved steady growth.

The company achieved a net profit attributable to shareholders of listed companies of approximately 1.838 billion yuan, which turned losses into profit year-on-year. The implementation

36 / 450

of a package solution increased the company's total profit in 2019 to approximately 1.355 billion yuan (including the sale of Pride and the cancellation of performance compensation shares Income). The company's "high-end smart equipment" business segment benefited from the increased market concentration of the downstream industry and the trend of increasing demand in the international market, continuing the growth momentum since 2018, and achieving steady growth in revenue and profits.

Since 2019, Dongfang Precision has mainly focused on the promotion of the following work:

1.Getting off burden and starting again, Pride's performance compensation dispute was successfully resolved

In 2019, the company had disputes with Pride and the original shareholders of Pride about the completion of Pride's 2018 annual performance commitments and profit compensation matters. In the course of disputes, the board of directors and management of Dongfang Precision have endured tremendous pressure from the inside and outside of the company, but they have always adhered to the bottom line, adhered to principles, overcome various difficulties, and actively took the premise of respecting the principles of marketization and legalization of the securities market to carry out communication with the government, supervision, arbitration tribunal and investors, present the true situation and seek understanding and support. It adhered to the premise of legal compliance, properly sought dispute resolution solutions, resolved the potential huge risks of listed companies, and protected the legitimate interests of listed companies and the company's large and small investors. On November 25, 2019, Dongfang Precision and Pride and the original shareholders of Pride signed the "Agreement" to reach a "package solution" to resolve the previous Pride performance compensation dispute. The plan was approved by the December 2019 interim general meeting of shareholders, and the company and relevant parties confirmed on December 25, 2019 that the delivery items agreed in the "Agreement Package" of the "Package Solution" have been implemented. 1.5 billion yuan transfer of 100% equity of Pride by Dongfang Precision; on January 8, 2020, the company received a notice from Shenzhen Branch of China Securities Depository and Clearing Co., Ltd. that five former Pride shareholders held 293,520,139 A share ordinary stock of Dongfang Precision perform performance compensation obligations to Dongfang Precision, and the relevant performance compensation shares repurchase and cancellation work of Dongfang Precision 37 / 450

at a consideration of 1 yuan have all been implemented. On the delivery date, Dongfang Precision also exempted Pride's original shareholders under the "Profit Compensation Agreement" for the 2019 performance commitment and the end of 2019 impairment test compensation obligations.

The completion of the implementation of the above-mentioned package solution has had the following positive impact on the company's subsequent operations:

1.1 Get cash back, effective improvement of financial situation and profitability

First, the implementation of the package solution increased the company's total profit in 2019 by approximately 1.355 billion yuan (including the proceeds from the sale of Pride and the cancellation of performance compensation shares), which has effectively mitigated the negative impact of the company's provision of Pride's goodwill impairment provision on undistributed profits in 2018.

Secondly, through this transaction, the company stripped off the core auto parts business and recovered 1.5 billion yuan in cash, which greatly improved the company's financial situation. After the sale of Pride, the company's net assets have further increased in size, its asset-liability structure has been further optimized, and its solvency indicators such as current ratio and quick ratio have been enhanced.

Again, as shown in the following table, although the company's operating income has decreased after the completion of this transaction, the company's operating efficiency and quality have been significantly improved, and its gross profit margin has increased significantly.

| Item | 2019 (including Pride) | 2019 (excluding Pride) |
|---|---------------------------|---------------------------|
| Operating income (ten thousand yuan) | 997,350.36 | 286,740.63 |
| Operating cost (ten thousand yuan) | 828,643.21 | 205,647.77 |
| Operating gross profit (ten thousand yuan) | 168,707.15 | 81,092.86 |
| Gross margin | 16.92% | 28.28% |

1.2 Protect shareholders' rights and resolve potential major risks

Since the performance compensation dispute between Dongfang Precision and the original shareholders of Pride, the two parties have continued to show contradictions and confrontation. If the performance compensation disputes cannot be properly resolved in a manner acceptable to all parties, and the contradiction between the two parties will continue until 2020, the company will face the possibility of continuing to respond to the risk of litigation and arbitration that is indefinite and undetermined. Under such circumstances, the normal operating activities, financial status, operating performance and even team members of Dongfang Precision will be severely and negatively affected, which in turn may cause the company's stock price to fluctuate and damage the vital interests of the majority of small and medium investors.

The company adheres to principles, overcomes all kinds of difficulties, and on the premise of legal compliance, in 2019, a package of solutions was used to properly resolve the performance compensation dispute with Pride, which resolved the potential huge risks of listed companies and safeguarded the majority of listed companies and companies. The legitimate interests of small and medium investors.

1.3 Adjust the layout to focus on high-end smart equipment

During the reporting period, Dongfang Precision was mainly engaged in the business of "intelligent packaging equipment" and "outboard machinery equipment", and the business of "automobile core parts" was mainly the business of "power battery system" (sold at the end of the reporting period).

Although the revenue of the sold power battery system segment accounted for a relatively high revenue in the reporting period, the gross profit margin of this type of business was low, which lowered the company's overall operating gross profit margin. After selling 100% equity of Pride, Dongfang Precision will, on the one hand, divest the "power battery system" business with large fluctuations in operating performance and low profitability, on the other hand, it will still be engaged in "smart packaging equipment" and "outboard machinery equipment " business, and this kind of business will be more concentrated and prominent.

The company successfully adjusted its main business development strategy in a timely manner through this successful settlement of Pride's performance compensation disputes, returned to focus 39/450

cninf多 巨潮资讯 www.cninfo.com.cm on high-end smart equipment business, and further became bigger and stronger, which in turn was beneficial to the future long-term healthy and sustainable development of Dongfang Precision to improve the company's operating performance and company quality; and then help to protect the interests of the company's majority of small and medium investors.

2.Focus on the core business and build a global leading enterprise in the field of intelligent corrugated box packaging equipment

After the sale of Pride, Dongfang Precision focused on its core main business—smart packaging equipment business, and provided complete solutions for high-end smart corrugated packaging equipment to downstream customers with a complete entire industrial chain layout, high-end intelligent products, and a leading service model.

As an equipment supplier of downstream corrugated box packaging manufacturers, the company has the characteristics of business focus, resource advantages (research and development and innovation capabilities), stable performance growth, and leading market share. This makes Dongfang Precision the number one domestic leader in the field of intelligent corrugated box packaging equipment and the top three leading companies in the world.

2.1 Corrugated board production line business

The company's corrugated board production line business consists of Fosber Group and Fosber Asia. During the reporting period, the corrugated board production line business achieved operating income of approximately 2.064 billion yuan, accounting for a relatively large proportion of the company's high-end intelligent equipment business segment.

Fosber Group is the world's leading supplier of corrugated board production lines, focusing on technological innovation and product design. In a constantly changing and increasingly competitive market, Fosber Group can provide customers with the most advanced technology to ensure that customers achieve corrugated board production. At the same time as high efficiency, it can greatly achieve high-quality flexible production.

2.1.1 Operating performance

In 2019, Fosber Group continued the momentum of steady growth in operating income and net

profit in 2018, and revenue and profit hit a new high. Operating income reached 239 million euros, a year-on-year increase of approximately 24%, and net profit of approximately 22.17 million euros, a year-on-year increase of approximately 21%.

2.1.2 Income composition

From the perspective of revenue type, during the reporting period, Fosber Group's various types of corrugated cardboard production lines have a total line product and stand-alone product sales revenue of approximately 160 million euros, accounting for approximately 67% of revenue. The income ratio contributed by spare parts sales and technical support services remained at around 30%, and the overall gross profit margin remained stable compared with 2018.

The achievements of Fosber Group in the sales of the entire line of products in 2019 fully illustrate its competitiveness and market position in the global corrugated packaging equipment market, and its global market share has steadily increased to about 30%.

From the perspective of regional revenue sources, Fosber Group has maintained steady growth in the two major markets of the United States and Europe by virtue of its global layout of R & D, production and services during the reporting period, and has not been negatively affected by changes in the international trade environment. It has maintained relatively stable cooperative relations with major global corrugated board manufacturers such as Smurfit, IP, DS Smith, etc.

Fosber US maintained its leading position in the US market in 2019. In 2019, its market share in the North American high-end tile line market reached about 50%, and its operating income and order delivery increased by approximately 26% year-on-year.

Fosber Asia is committed to providing high-quality corrugated product production lines and related technical support services for the Chinese and Asian markets. It continued the sales growth momentum in 2019 and achieved operating income of approximately 190 million yuan, an increase of nearly 60% year-on-year. The order delivery volume in 2019 increased by 50% year-on-year. During the reporting period, Fosber Asia continued to promote and successfully realized the localization of the Pro-line, the mid-to-high-end product of the Fosber Group, reducing manufacturing costs by approximately 25%. At the same time, Fosber's overseas business in Asia has also developed rapidly, with a breakthrough in overseas orders from scratch in 2019.

41 / 450

2.2 Corrugated box printing complete production line business

The corrugated box printing complete production line business is composed of Dongfang Precision (China) and Dongfang Precision (Europe). During the reporting period, the company's corrugated box printing complete production line business contributed a total of approximately 622 million yuan in operating income.

Corrugated box printing complete production line business is the cornerstone of the company's main business development. During the reporting period, Dongfang Precision (China) achieved revenue of 454 million yuan in its main business, which increased steadily. Such business results are hard to come by in the context of the domestic macroeconomic downturn in 2019 and the continued severe international trade situation.

From the perspective of revenue product composition, during the reporting period, the sales of spare parts and technical support services for the corrugated box printing complete production line business maintained relatively rapid growth, which also drove the company's corrugated box printing complete production line operation growth; the company's corrugated carton printing linkage line product sales increased by more than 30% year-on-year. In terms of market expansion, during the reporting period, the company's corrugated box printing complete production line business continued to grow in the international market, especially in Southeast Asia and Africa and other emerging countries. During the reporting period, the company made breakthroughs in cooperation with large enterprises in the domestic paper product packaging and printing industry, and successfully reached cooperative relations with Meiyingsen, Yongfengyu and other group customers.

During the reporting period, Dongfang Precision (Europe) achieved operating income of approximately 168 million yuan and achieved steady growth. During the reporting period, several high-end new product designs were completed. In terms of market expansion, while continuing to consolidate and increase its European market share, Dongfang Precision (Europe) actively explores the US market through various measures to achieve new revenue growth points.

3. Focusing on Industry 4.0, leading the "new infrastructure" of the corrugated box industry

During the reporting period, Fosber Group actively implemented the Industry 4.0 model. With the $\frac{42}{450}$

help of Fosber Group's industrial 4.0 technology layout in the four fields of intelligent recognition, intelligent diagnosis, intelligent correction and self-learning, it uses hard and soft integration and integrated output to provide key support for new infrastructure construction and integration of innovative applications in the downstream corrugated packaging industry.

Industry 4.0 is based on the foundation of computerization and network connection, and uses big data and algorithms as means to realize the self-learning and intelligent production of machines. The machine's self-learning and intelligent production are divided into four stages: visualization stage (intelligent identification problem), transparency stage (intelligent analysis problem), prediction stage (intelligent prediction problem trend), and adaptive stage (artificial intelligence provides solutions). At present, Fosber has completed the functional design of the above four stages.

Fasi del percorso di sviluppo dell'Industria 4 (fonte: FIR e. V. presso RWTH Università di Aachen)

Fosber Group Industry 4.0 products include PRO series family products, in which PRO/ SYNCRO collects production data of corrugated cardboard production line; PRO/CARE conducts in-depth analysis based on relevant data; PRO/QUALITY monitors products in real time to ensure quality; PRO/REMOTE realizes the secure connection of data through the Internet of Things communication technology, so that the machine data is no longer an island; PRO/SERVICE online and offline continue to support and extend all the functions of the Fosber Group Industry 4.0 PRO/ series of family products at the beginning, and finally achieve smart and sustainable production.

At the same time, after diagnosing production line problems, the system will directly issue corresponding parts replacement suggestions and operation guidelines and deliver them to Fosber $\frac{43}{450}$

Group customers in a timely manner. Fosber Group uses virtual reality, 3D technology, visual recognition and other corresponding technologies to provide a good guarantee for the operation of the corrugated cardboard production line.

In addition to the data cycle and artificial intelligence learning inside the machine, Fosber Group Industry 4.0 has also strengthened the connection between the machine and humans, while maximizing the stability of the machine, greatly reducing the dependence on the operator's personal level and improving production flexibility and adaptability, reducing customer cost input.

4.Leading service manufacturing, building an industrial ecological closed loop

With the emergence of a new round of industrial revolution, service-oriented manufacturing has become a world trend. The United States has put forward strategies such as revitalizing manufacturing, "re-industrialization", and "jobs returning to US". Germany proposes Industry 4.0 to enhance the manufacturing level through the in-depth application of CPS new technologies such as the Internet and the Internet of Things. China's manufacturing industry is facing huge challenges: first, China's manufacturing industry is large but not strong, and it is at the low end of the global industrial value chain; second, under the new normal, it enters a strategic period of industrial restructuring. Carrying out service-oriented manufacturing is an important path for Chinese manufacturing companies, especially leading companies in the industry, to break through the low-end lock-in and extend to the high-end of the value chain, improve the closed-loop of the manufacturing ecosystem, and strengthen the control and voice of the international market. It is also a key way for China to transform from big to strong in manufacturing.

Fosber Group continues to strive to improve the reliability and automation of its products, and to provide customers with high-level technical support and after-sales service. In the context of Industry 4.0 becoming the future development trend of the manufacturing industry, Fosber Group continues to increase the level of intelligence in its products and technical services. The PRO/ CARE intelligent technical support service it launched, based on Internet intelligent monitoring technology, can capture and collect data related to machine operation and cardboard production in real time and continuously during the operation of the machine, which can be used for each equipment unit on the entire line to plan and manage all necessary maintenance work, so as to

achieve the replacement of traditional manual production line maintenance.

During the reporting period, Fosber Group focused on building customer service centers, simplifying work processes, improving after-sales service efficiency, and providing customers with more "specialized" after-sales service, spare parts supply, and technical support.

Fosber Group's high level of technical support and customer service

In order to ensure the timely and professional service, Fosber Group provides 24/7 telephone and remote technical support services, and has a technical support team composed of highly specialized and experienced technical experts to provide comprehensive technical solutions and customized services according to customer requirements worldwide.

In terms of spare parts supply, in the past few years, Fosber Group and Toyota Academy have continued to cooperate in depth, implement the JIT (lean production management) concept in production and customer service, with its innovative fully automated spare parts inventory management system, and forms a good partnership with major transportation companies and postal companies, so as to achieve a variety of spare parts products to customers at any time of the day.

5. Improve industrial puzzles and continue to lay out the "Belt and Road" initiative

In order to further improve the company's "smart packaging equipment" industrial chain layout, at the end of May 2019, the company's wholly-owned subsidiary Fosber Group completed the acquisition of a 70% stake in corrugated roll supplier Tiruna Group, continuously improving the company's industrial distribution in smart packaging equipment field.

In addition, during the reporting period, in order to cope with the decline in sales in the US market caused by changes in the global trading environment, the company's corrugated box printing complete production line business has also made breakthrough progress in the expansion of emerging country markets and the Belt and Road countries. The direct sales in Africa, Southeast Asia and South Asia markets have doubled compared with 2018, and the growth momentum is expected to continue.

The company seizes a historic opportunity provided by the "Belt and Road" initiative for the internationalization of China's manufacturing industry, and takes advantage of China's equipment manufacturing industry in countries and regions along the "Belt and Road" to continue to deploy in emerging markets and deliver high-end smart packaging equipment products and services to the "Belt and Road" countries and regions to further expand the company's business market space.

Facing the new challenges brought by Chinese enterprises' "going global" to product R&D, management, manufacturing and marketing, the company has continuously improved its product power, technological innovation and marketing capabilities, and further promoted the transformation and upgrading and high-quality development of the smart packaging equipment industry.

6.The outboard motor business develops steadily, accumulating strength for future development

During the reporting period, the subsidiary Parsun Power maintained the industry position of the largest domestic outboard supplier. Under the guidance of the business purpose of providing high-quality, highly reliable and cost-effective water power products for the Chinese market and the international market, Parsun Power focuses on outboard motor series products. Its operating performance maintained a stable development trend and its outboard engine production and sales hit a record high, and its operating performance maintained a stable development a stable development. The annual operating income achieved was 299 million yuan.

In 2019, Parsun Power actively responds to market changes and adjusts its strategies to increase the development of the domestic market. During the reporting period, domestic market sales increased by 30%. From the perspective of product type, the sales revenue of outboard motor products with a power of over 40 horsepower sold by Parsun Power during the reporting period increased by 30% compared with last year.

While continuing to consolidate and enhance the market share and status of small and $\frac{46\,/\,450}{}$

medium-horsepower outboard motor products, Parsun Power is also orderly advancing the research and development of high-horsepower outboard motors. During the reporting period, Parsun Power's high-power F115 outboard motor with independent intellectual property rights was successfully ignited. It is the largest horsepower model among domestic outboard motors. It has made breakthroughs in advanced technologies such as electronic fuel injection technology and cylinder-less technology, and is expected to become Parsun Power's new sources of performance growth in the future.

Outboard planes are also widely used in military equipment. With the implementation of the national military-civilian integration policy, in 2019 Parsun Power will continue to develop the military market, and has made significant progress in products and orders. In the future, military products business will also become an important support for Parsun Power's development.

Explanation

2.6 Whether the scope of consolidation has changed during the reporting period

$\sqrt{\rm YES} \ \square \ NO$

1. During the reporting period, the company sold 100% of Pride's equity. The delivery of the relevant equity sale was completed on December 25, 2019. After the completion of the delivery, Pride will not be included in the company's consolidated financial statements for the 2019 annual financial report.

2. The subsidiary Fosber Group acquired 70% of the equity of the Spanish Tiruna Group. The delivery of the equity acquisition was completed on May 30, 2019. After the completion of the delivery, the Tiruna Group was included in the company's consolidated

financial statements for the 2019 annual financial report.

3. In March 2019, Parsun US completed the cancellation and will no longer be included in the company's consolidated financial statements for the 2019 annual financial report from the date of cancellation.

4. In October 2019, Guangdong Flando completed the cancellation and will no longer be included in the company's consolidated financial statements for the 2019 annual financial report since the date of cancellation.

2.7 Significant changes or adjustments in the company's business, products or services during the reporting period

 \checkmark Applicable \square Not applicable

In the first 11 months of 2019, Dongfang Precision's main business has a "dual main business" structure: high-end smart equipment business segment (including "smart packaging equipment" and "outboard machine equipment" business, and "automobile core parts business segment", The main business is Pride's "power battery system" business.

After the sale of Pride at the end of December 2019, the company's overall main business has undergone major changes, and the previous "dual main business" structure has become focused on the "high-end intelligent professional" main business, and the products and services provided have also changed to provide intelligent packaging equipment related products and services, as well as outboard machine products and related services.

2.8 Main sales customers and main suppliers

The company's main sales customers

| Total sales amount of the top five customers (yuan) | 7,624,070,010.26 |
|---|------------------|
| The proportion of the total sales of the top five customers to the total annual sales | 76.44% |
| The sales of related parties accounted for the proportion of total annual sales in the sales of the top five customers | 72.46% |

Top 5 customer information of the company

| Serial number | Client's name | Sales (yuan) | % Of total annual sales |

Other facts about major suppliers

 \Box Applicable $\sqrt{}$ Not applicable

3. Cost

| | 2019 | 2018 | YoY increase and decrease | Description of major changes |
|-----------------|----------------|----------------|---------------------------|---|
| Sales cost | 414,527,474.88 | 520,723,396.56 | -20.39% | This is mainly due to the consolidation of Beijing Pride's January-November 2019 data and the decrease in Pride's sales expenses this year. |
| Management cost | 365,218,611.72 | 286,222,575.20 | 27.60% | Mainly due to the disposal of the related expenses incurred by Pride and the increase in management costs brought about by business growth this year. |
| Financial cost | -16,869,846.12 | 23,145,620.29 | -172.89% | Mainly due to the increase in interest income this year. |
| R&D cost | 156,654,915.42 | 218,476,516.42 | -28.30% | This is mainly due to the merger of Beijing Pride's January-November 2019 data and the decrease in Pride's research and development expenses this year. |

4.R&D Investment

 \checkmark Applicable \Box Not applicable

Company R & D investment

| | 2019 | 2018 | Change ratio |
|--|----------------|----------------|--------------|
| Number of R&D personnel (person) | 392 | 447 | -12.30% |
| Proportion of R&D personnel | 23.99% | 20.33% | 3.66% |
| R&D investment amount (yuan) | 169,319,720.80 | 229,067,274.61 | -26.08% |
| R&D investment as a percentage of operating income | 1.70% | 3.46% | -1.76% |
| Amount of capitalized R&D investment (yuan) | 12,664,805.38 | 10,590,758.19 | 19.58% |
| Capitalized R&D investment as a percentage of R&D investment | 7.48% | 4.62% | 2.86% |

The reason for the significant change in the proportion of total R & D investment in operating income compared with the previous year

\checkmark Applicable \square Not applicable

The main reason for the change in the ratio of R & D investment to operating income is that this year, only Pride's January-November 2019 data was merged and Pride's research and development expenses decreased.

The main reason for the decrease in the number of R & D personnel was that the company transferred Pride's equity during the reporting period and did not include Pride in the number of employees.

Reasons for the substantial change in the capitalization rate of R & D investment and its rationality

 \Box Applicable $\sqrt{}$ Not applicable

5.Cash flow

unit: yuan

| Item | 2019 | 2018 | YoY increase and decrease |
|---|------------------|------------------|---------------------------|
| Subtotal of cash inflow from operating activities | 5,971,827,830.59 | 5,264,537,409.33 | 13.43% |
| Subtotal of cash outflow from operating activities | 5,690,530,043.58 | 4,542,812,608.21 | 25.26% |
| Net cash flow from operating activities | 281,297,787.01 | 721,724,801.12 | -61.02% |
| Subtotal of cash inflow from investment activities | 4,858,499,596.17 | 3,793,281,802.05 | 28.08% |
| Subtotal of cash outflow from investment activities | 4,736,987,401.92 | 2,948,145,345.71 | 60.68% |
| Net cash flows from investing activities | | 845,136,456.34 | -85.62% |
| Subtotal of cash inflows from financing activities | 362,807,582.84 | 1,423,283,210.38 | -74.51% |
| Subtotal of cash outflows from financing activities | 605,506,468.14 | 1,830,987,393.84 | -66.93% |
| Net cash flow from financing activities | -242,698,885.30 | -407,704,183.46 | 40.47% |
| Net increase in cash and cash equivalents | 168,727,295.04 | 1,158,966,100.91 | -85.44% |

Explanation of the main influencing factors of significant changes in relevant data year-on-year

 \checkmark Applicable \square Not applicable

1. The net cash flow generated by the company's operating activities decreased by 61.02%, which was mainly due to the increase in cash from Pride's procurement expenditure.

2. The net cash flow generated by the company's investment activities decreased by 85.62%, which was mainly due to the disposal of Pride to recover cash and purchase financial products at the end of the year.

3. The net cash flow generated by the company's financing activities increased by 40.47%, which was mainly due to the decrease in the bank acceptance deposit.

4. The company's net increase in cash and cash equivalents decreased by 85.44%, mainly due to the increase in cash outflows from operating activities and investment outflows.

Explanation of the reasons for the significant difference between the net cash flow generated by the company's operating activities during the reporting period and the current year's net profit

 \checkmark Applicable \square Not applicable

The main reason for the significant difference between the net cash flow generated by the company's operating activities during the reporting period and the current year's net profit was the disposal of 100% equity of Pride and the accounting treatment of the performance compensation of the original shareholders of Pride.

| | Guangdong Dongfang Precision Science & Technology Co., Ltd. 2019 Annual Report |
|---|---|
| | 1. IPO raised funds change project |
| | One of the company's initial public offerings, one of the fundraising projects, the Corrugated Box Printing Machinery and |
| | Complete Equipment Project, mainly invested in the purchase of the company's new factory land, plant construction and |
| | decoration, and the purchase of fixed assets such as electromechanical power equipment and mechanical processing equipment. |
| | The new factory there has been ready for use on November 1, 2014. |
| | The project has a long construction period, considering the increase in construction costs such as labor and civil construction |
| | during the construction period, the price increase due to the selection of electromechanical power equipment and mechanical |
| | processing equipment, and considering the improvement of It is estimated that the total amount of the project payable and the |
| Explanation of reasons for changes, decision-making | warranty deposit, etc., will be approximately RMB 420 million, which exceeds the original investment promised by the funds |
| procedures and information disclosure (by specific items) | raised. |
| | The company's first listing and investment project "Regional Marketing Center Technical Transformation Project" aims to serve |
| | the expansion of the company's production capacity and the development of domestic and foreign markets after the "corrugated |
| | box printing machinery and its complete equipment project" is put into production. After the company's listing, it gradually |
| | builds a perfect domestic Sales network, and through the acquisition of Italian Fosber Group and Italian EDF company to further |
| | deepen the international marketing network layout, including Europe and the Americas, can meet the future product sales volume |
| | and sales area expansion. |
| | The company's first listing and investment project "R & D Center Construction Project" aims to achieve "upgrading of existing |
| | products and strengthening the research and development of complete sets of CNC servo electromechanical equipment |
| | technology through investment in infrastructure to ensure the company's leading position in the industry." Strive for the |

Guangdong Dongfang Precision Science & Technology Co., Ltd. 2019 Annual Report

company's production technology to reach the world's advanced level. " Through the acquisition of the Italian Fosber Group and the establishment of a joint venture company, the company has made leaps and bounds in the introduction of international new technologies and research and development of new products by acquiring the Italian EDF company, and further deepened the company's leading position in the corrugated box machinery industry. The R & D project plan prepared at the time of the company's IPO.

Based on this, the company will "regional marketing center technical transformation project" as of January 31, 2015 remaining raised funds and accumulated interest of 23.3648 million yuan and "research and development center construction project" as of May 31, 2015 remaining raised funds and accumulated The interest was changed to 13.47 million yuan, and invested in the "Corrugated Box Printing Machinery and Complete Equipment Project" to use the raised funds more efficiently and maximize the economic benefits.

The above changes in the use of raised funds have been approved by the 22nd meeting of the second board of directors of the company, the 27th meeting of the second board of directors, the 2015 first extraordinary general meeting of shareholders and the third temporary shareholders of 2015 Approved by the General Assembly.

2. The situation of the change of non-public offering funds raised in 2016

According to the actual situation of the company's development, in order to improve the use efficiency of the raised funds, reduce the company's financial costs, and protect the interests of investors, the company changed the use of part of the funds raised from the non-public offering of shares in 2016 from "replenishing working capital" to "repaying bank loans.", To repay loans of Industrial Bank, Bank of China, China Merchants Bank and Far East Leasing Company totaling 203.5656 million yuan..

Description of major holding companies

VIII. The situation of the structured main body controlled by the company

 \Box Applicable $\sqrt{}$ Not applicable

IX. Prospects for the company's future development

1. Industry pattern and trends

1.1 Industry pattern and company industry status

1.1.1 Industry development history and pattern

More than 160 years ago, the British discovered the corrugated structure and invented corrugated paper packaging. After more than half a century of perfection, the scientific development of the corrugated structure has become more perfect and mature, and finally occupied half of the commodity packaging.

China's corrugated box industry started late, and the use of corrugated boxes began to be promoted in 1954, 40 years later than Japan and 60 years later than the United States. At this stage, China's technical starting point was low. At the beginning, it used the single machine used in Japan in the early days. All the processes were connected by hand, and there was no pipeline operation. In 1975, Beijing Carton Factory took the lead in introducing the first automatic corrugated paper production line in China-D3 type double corrugated board production line to Uchida Manufacturing Co., Ltd. In 1982, the Capital Aerospace Machinery Company affiliated to the China Launch Vehicle Technology Research Institute successfully developed China's first 1.2-meter corrugated cardboard automated production line, and China's corrugated box industry began to take off.

Since the reform and opening up, China's corrugated box industry has developed rapidly, showing

great vitality, and the output value created by it has accounted for about 85% of the overall output value of China's paper packaging industry. The growth rate is also the highest among all countries. At present, the market volume has surpassed that of the United States, becoming the world's largest corrugated box market.

Corrugated cardboard packaging is widely used in downstream consumer industries such as home appliances, electronic products, IT, food and beverage, books, daily chemicals, textiles and logistics express companies.

With the rapid development of the global economy, the demand for commodity packaging is gradually increasing, and the demand is driving development. Corrugated carton factories continue to increase capital investment to transform backward production equipment and improve the quality of corrugated carton to meet consumer demand.

In terms of products, the corrugated board production line at the upstream of the industrial chain had global sales of approximately RMB 15 billion in 2018, and its main sales areas are concentrated in Europe, America and the Asia-Pacific region. Among them, the income in Europe and America is about 7.7 billion yuan, accounting for 51%; the revenue in the Asia-Pacific region is about 6.6 billion yuan, accounting for 44%; the other regions are 600 million yuan, accounting for 4%. From a global perspective, the corrugated board production line industry is highly concentrated. The main brands (ranked by revenue) are German BHS, Italian Fosber Group (a wholly-owned subsidiary of Dongfang Precision), and Marquip (a wholly-owned subsidiary of the American Barry-Wehmiller group).

The corrugated box printing complete production line in the middle of the industry chain has a global market size of about 30 billion yuan in 2018, of which 50% are mid- to high-end products. Among them, the Asian market is about 15 billion yuan, accounting for 50%; the US market is about 7.5 billion yuan, accounting for 25%; the European and Japanese markets are about 7.5 billion yuan, accounting for 25%. From a global perspective, the concentration of the industry is low, even if the industry leader Swiss Bobst has a market share of less than 10%. The major brand manufacturers in the industry (ranked by revenue) include Bobst (Switzerland), Gopfert (Germany), Dongfang Precision, and Ward (a wholly-owned subsidiary of the American Barry-Wehmiller

Group).

1.1 2 Industry competition landscape and company industry status

A. Corrugated board production line market segment: Dongfang Precision subsidiary Fosber Group ranks second in global market share

In the field of corrugated board production lines, Fosber Group is an important supplier of high-end corrugated board production lines in the European and American markets. It is one of the world's two largest companies in the field of high-speed wide-width corrugated board production lines, and its market share in the world At around 30%. Clients cover well-known large-scale packaging companies such as International Paper and Smurfit Kappa Turnhout. They are important global high-end corrugated cardboard production line technology promoters and innovators, and have a very high reputation and influence in the global market.

Fosber Group's main competitor and benchmarking company in the global corrugated board production line industry market is German BHS. BHS has a history of more than 60 years in corrugated machinery. Through years of development and accumulation, BHS has established a reliable brand value and deep customer relationships in the field of corrugated cardboard production lines. At the same time, relying on its long-term accumulation, it occupies about 35% of the market share. According to the financial statements publicly disclosed by BHS, the company's revenue in 2018 was 575 million euros and its net profit was 30 million euros.

Comparative analysis of Fosber Group and benchmarking competitor BHS:

a) In recent years, Fosber Group has grown faster than BHS

After being acquired by Dongfang Precision in 2014, Fosber Group has achieved rapid growth in revenue scale and profitability through strategic and financial support. Its growth rate exceeded BHS in 2017-2018.

b) Higher operational efficiency and stronger cost control capabilities

With the establishment and development of Fosber Asia, the integration of the Fosber Group's supply chain system in China and emerging Asian markets will be further improved, which will be beneficial to cost control, customer collaboration and supply chain collaboration.

82 / 450

c) R&D strength is not too much

In terms of product and technical strength, Fosber Group has a strong global R & D team, and through efficient and flexible R&D management and accurate market positioning, it has continuously reduced the difference between BHS and the product library layout. At present, both parties can provide the market with the most advanced high-speed wide-width corrugated cardboard manufacturing equipment, each with advantages in product quality and efficiency.

d) Fosber Group continues to improve the layout of the industrial chain and enhance its comprehensive competitiveness

In 2019, the Fosber Group completed the acquisition of the Spanish corrugated roll manufacturer Tiruna Group, the core component supplier of the corrugated board production line; through this acquisition, the Fosber Group has provided a solid guarantee for the supply of key components for its corrugated board production line business.

In early 2020, Fosber Group set up a subsidiary to establish a new holding subsidiary Quantum Corrugated S.r.l., and used it as the main body of the acquisition to complete the acquisition of related business assets of the old Italian corrugated board manufacturer Agnati. After the completion of the acquisition, Fosber Group holds a 60% stake in Quantum Corrugated S.r.l.

Agnati's history in the corrugated board production line industry can be traced back to the 1930s, and has more than 90 years of development so far. As a pioneer in the international industry, Agnati has pioneered many landmark technologies and products in the design and manufacture of corrugated board production lines, and has cumulatively sold and installed more than 3,000 product equipment in 82 countries across five continents; Quantum high-speed intelligent corrugated board production line series products have been widely praised by customers in the market. The unique design of Quantum's high-speed intelligent corrugated cardboard production line is very suitable for the embedding of digital printing technology, and it is very popular with digital printing packaging customers.

Through the above layout, Fosber Group not only has the supply and production capacity of core spare parts corrugated rolls for corrugated cardboard production line equipment through the acquisition of Tiruna Group, but also has acquired the world-leading and more suitable for 83/450

customers by acquiring Agnati related business and assets. The ability of corrugated board production line combined with digital printing technology. The Fosber Group's layout in the field of corrugated board production lines continues to improve, and its comprehensive competitiveness is further enhanced.

e) Excellent service ability and technology application of Industry 4.0

Another major advantage of Fosber Group is its complete Industry 4.0 system. Through in-depth practice of Industry 4.0 technology, it greatly improves the production efficiency and flexibility of customers. The Fosber brand's technical support services are well-known and unique in the industry.

B. Corrugated box printing equipment market segment: Dongfang Precision (China) is the "invisible champion" of the domestic industry and has the strength to compete with the global industry leaders

Compared with foreign industries, the corrugated box printing equipment industry in China started late. Most enterprises lacked technological innovation and relied on imitation. The corrugated box printing equipment produced was of low quality. Therefore, although the domestic corrugated box printing equipment industry has a large number of enterprises, it is mostly small and medium-sized enterprises with single product functions and low technical level. It mainly meets the overall industry status of downstream small and medium-sized corrugated box manufacturers.

The only domestic large-scale and high-tech corrugated box printing equipment manufacturers are only a few such as Dongfang Precision and Taiwan Changsheng. They focus on the development and production of high-end corrugated box printing equipment. The product quality is ahead of domestic counterparts and meets international At the same level, we have exported medium and high-end corrugated box printing equipment in batches to mature markets such as Europe and the United States, and the price is more competitive, gradually leading China's corrugated box printing equipment manufacturers to move closer to the international advanced level.

Among them, Dongfang Precision relies on the advantages of global resource coordination, with leading design concepts and overall R&D strength, standardized whole-process quality management system, leading production process level and system integration capabilities, it can provide $\frac{84}{450}$

cninf 多 巨潮资讯 www.cninfo.com.cr personalized/flexible/specialized production service, the most complete product echelon and product chain in the domestic industry, the brand advantage and first-mover market advantage of A-share listed companies, customer-centric full-process technical support and after-sales service system, etc, so as to become the "invisible champion" in the corrugated box printing equipment industry.

Globally, Dongfang Precision's main competitor and benchmarking company in the field of corrugated box printing equipment is Bobst, Switzerland. Bobst is the world's largest processing equipment and service provider for substrate processing, bottom-printing slotting die-cutting machine, printing slotting sticking box linkage line, and carton folder-gluing machine, with a history of more than 120 years. Most of its products are printing-slotting die-cutting machines and printing-slotting stick-box linkage line products suitable for the European and American markets. Its main markets are in Europe and the United States, and a small amount in Asia. Its high-end product positioning and global sales network have laid a solid foundation for occupying the top position in the global industry.

The comparison analysis of the products that Dongfang Precision and international competitors

| can provide is | as follows: |
|----------------|-------------|
|----------------|-------------|

| Commonly | Up-print | Down-print | Pre-feeder | | Stick camera | | Stripping unit | | Stacker | Stacking machine |
|-------------------|--------------|--------------|--------------|--------------|--------------|--------------|----------------|--------------|--------------|---------------------|
| Company | op print | bown print | Up-print | Down-print | Up-print | Down-print | Up-print | Down-print | Stacker | machine |
| Bobst | | \checkmark | \checkmark | \checkmark | \checkmark | \checkmark | \checkmark | \checkmark | \checkmark | \checkmark |
| Gopfert | | \checkmark | | \checkmark | | | | | \checkmark | |
| Dong fang /EDF | \checkmark | \checkmark | \checkmark | \checkmark |
| Ward | | \checkmark | | | | | | | | |

It can be seen that in the subdivided field of corrugated box printing equipment, Dongfang Precision covers the main product types, such as the upper printing type, the lower printing type, the pre-feeder, the gluer, the stacker, and the stacking machine. It has strong design, production and sales capabilities. As a business leader, Swiss Bobst also specifically provides the ability to provide major products in the value chain. The main products of other competitors are concentrated in

individual links of the value chain.

Comparative analysis of the business of Dongfang Precision Corrugated Box Printing Equipment and its benchmark competitor Bobst:

a. In recent years, in the field of corrugated box printing equipment industry, especially in the international market, the influence of Dongfang Precision brand has gradually increased, and the gap with Bobst and other first-tier European and American brands is rapidly narrowing. At the same time, Dongfang Precision depends on the domestic complete supply chain system and efficient operation management, its product profit margin far exceeds other competitors in the same industry.

b. Compared with its international counterparts, Dongfang Precision's product advantage is that the company's printing slotting die cutting machine and printing slotting sticking box linkage line have complete specifications, including down-print products suitable for markets in Europe, America, and Japan. At the same time, it also includes print-on products suitable for the Asian market. Dongfang Precision can provide more complete product types and product lines, such as: the product specifications of the printing machine, Dongfang Precision can provide 26 different sizes (from 6 * 18 to 25 * 40) of machine products, while Bobst can only provide 2 Specifications (6 * 18 and 8 * 21 respectively). International competitors have provided lower-print products suitable for markets in Europe, America, and Japan, but lacked upper-print products suitable for Asian markets.

c. Dongfang Precision was established in 1996, compared with Bobst's 120 years of development, it is still in its infancy. In spite of this, Dongfang Precision's R & D strength has been closely following the first-line European and American manufacturers. Its high-end corrugated cardboard printing and slotting die-cutting equipment has been dominant in the domestic market and has a large leading advantage. Through high-quality stability and high output capacity, it has been gradually accepted by European and American overseas customers.

1.2 Industry Development Trends and Opportunities

1.2.1 Multiple factors contributed to the growth of the corrugated box industry, which is mainly driven by the express delivery industry.

Although the current supply and demand in the paper-making industry is basically balanced, the

development of market segments is still uneven, and structural gaps remain. According to the statistics of the China Paper Association, in 2018, national total output of boxboard and corrugated base paper was 42.5 million tons, and the total consumption was 45.58 million tons, with a gap of nearly 3.08 million tons.

From 2009 to 2018, the average annual growth rate of national cardboard production was 2.42%, and that rate for consumption was 2.93%. From 2009 to 2018, the average annual growth rate of national corrugated base paper production was 2.30%, and that rate for consumption was 2.59%. In the past 10 years, the annual gap between the two has reached 1.11 million tons. This market segment is strong in demand but witnesses a gap between supply and demand currently.

Benefiting from the macroeconomic prosperity, the increase in per capita consumption, the development of the express delivery industry and the government's preferential policies, China's corrugated packaging industry will continue to expand in its scale.

In terms of per capita consumption, compared with countries such as Japan and the United States, that figure for corrugated paper packaging in China is still relatively small. According to the data in 2017, the per capita consumption of corrugated paper packaging in China is 50.8 square meters per person, compared with 108.5 square meters per person in the United States and 110.6 square meters per person in Japan. That figure in China has a broad space for improvement, which has the potential to be almost doubled.

From 2012 to 2017 (square meters / person)

Data source: International Corrugated Case Association (ICCA), Wind Consulting

China's online consumption habits are gradually maturing, and the growth of the express delivery industry is an important increase in the corrugated packaging industry. According to the data of "China Paper", in 2018, the top three downstream areas of corrugated packaging in China were electronic products (accounting for 26.0%), beverages (accounting for 21.2%), food (accounting for 20.3%); express industry Currently only 13%.

The domestic health security incident in 2020 has accelerated the development of many fields, and online retail is a very representative field. With the rapid development of emerging consumption models, China's express delivery industry has also entered a period of rapid development. According to data from the State Post Bureau, China's express delivery volume exceeded 40 billion in 2017; China's express delivery volume exceeded 50 billion in 2018; in 2019, the nationwide express delivery service business volume totaled 63.52 billion, a year-on-year increase of 25.3%.

Data source: State Post Bureau

According to the "13th Five-Year" development indicators of the express delivery industry, China's express delivery volume will reach the goal of 75 billion pieces in 2020, and the express delivery per capita will increase from 0.01 in 2000 to about 50 pieces in 2020. The average compound growth rate reached 38.5%.

The rapid development of China's express delivery industry has prompted the market size of the express packaging industry to continue to rise. In 2018, the express corrugated packaging market reached 33 billion yuan.

2013-2018 China Express Corrugated Packaging Market Size and Growth

Data source: China Paper Association

Under the background of consumption upgrade, industrial upgrade drive and service industry leadership, with the increase in the richness of express service application scenarios, the deepening of the depth of embedded production and life, and the expansion of the industry involved, the express industry has great potential and space for development. According to the forecast of the Prospective Industry Research Institute, the scale of China's express delivery corrugated paper market will continue to increase in 2020-2025, and is expected to reach 86.4 billion yuan in 2025.

In terms of government policy, policies such as the "plastic restriction order" are encouraged to encourage the development of environmentally friendly and recyclable packaging materials. , Corrugated packaging products contain 93% recyclable materials at the same time. Corrugated packaging products are light-weight, recyclable, and easily degradable. They are considered "green packaging", which is in line with China's low-carbon circular economy and the goals of energy saving and emission reduction.

1.2.2 Integration of corrugated carton packaging industry, accelerating the upgrading of

packaging plant equipment

Affected by the low entry threshold and limited service radius of the packaging industry, most small and medium-sized packaging factories have scattered production capacity in the industry and low market concentration. In recent years, due to factors such as supply-side reforms, stricter environmental protection, and high labor and raw material costs, SMEs in the corrugated box packaging industry have accelerated their liquidation, and the market share of large enterprises has increased. The number of enterprises above designated size in the paper and cardboard container manufacturing industry (industrial corporations with an annual operating income of more than 20 million) decreased from 2,696 in 2013 to 2,391 in 2018, and the industry consolidation trend is obvious.

At the same time, since 2016, the capacity utilization rate of the company's product downstream customer industry leading companies (Jiulong Paper, Shanying Paper, etc.) has continued to increase to more than 90%, and market share has actually accelerated to concentrate on leading companies. However, compared with the market share of CR5 of 40% to 70% in Europe and the United States and other countries, the domestic corrugated box factory industry CR5 is less than 10%, and there is still much room for improvement in the concentration.

2017 CR5 international comparison of corrugated packaging industry

Data source: Frost & Sullivan, Wind Consulting

With the tightening of domestic environmental protection policies, rising labor costs, the development of e-commerce, and the continuous improvement of manufacturers' automation levels, end customers have placed increasingly higher requirements on the quality, delivery speed, and cost-effectiveness of corrugated packaging products. Large-scale carton factories prefer to purchase medium-to-high-end corrugated cardboard intelligent packaging production lines based on considerations such as high efficiency, high quality, cost reduction, environmental protection and energy saving. Market demand will promote the upgrading of industry technology and equipment, and accelerate the integration of the industry. This trend will be further transmitted to corrugated board manufacturing equipment and corrugated board printing equipment, accelerating the further increase of industry concentration in the equipment industry, and eliminating outdated equipment manufacturers with low technological content and low production efficiency.

1.2.3 Accelerate the implementation of intelligent manufacturing and lead the transformation of manufacturing service

The intelligent manufacturing industry chain covers intelligent equipment (robots, CNC machine tools, service robots, other automation equipment), industrial Internet (machine vision, sensors, RFID, industrial Ethernet), industrial software (ERP/MES/DCS, etc.), 3D printing and automatic system integration and production line integration that organically combine the above links.

Intelligent manufacturing equipment is the main carrier of intelligent manufacturing. The industrial scale, industrial robots, 3D printing equipment, CNC machine tools, intelligent control systems, sensors and other major industries involved in intelligent manufacturing equipment have achieved rapid growth in industrial scale.

From 2010 to 2018, China's smart manufacturing equipment industry maintained a relatively rapid growth rate. In 2018, the output value of the smart manufacturing equipment industry was approximately 1,748.011 billion yuan, a year-on-year increase of 16.55%.

2010-2018 China Smart Manufacturing Equipment Industry Output Value Scale Comparison

Source: Prospective Industry Research Institute

With the accelerated penetration of Internet technology and ideas, manufacturing companies have begun to promote multi-faceted transformations such as business models and organizational methods. At the same time, in the face of the urgent needs of smart manufacturing development and market space, domestic companies in various fields have entered the field of system solutions.

At the same time, intelligent manufacturing runs through the entire process of product manufacturing. Downstream customers can not only obtain personalized customized products, but also participate in them from the product design stage. At the same time, based on the Internet intelligent monitoring technology, the equipment provider can remotely monitor the operation status of the equipment during the operation of the machine, collect real-time machine operation and production related data, and then automatically analyze the collected machine operation data to achieve remote diagnosis and automatic production planning and management equipment maintenance and other functions, to achieve the replacement of traditional manual production line maintenance. Intelligent manufacturing producers not only provide products or "products + additional services", but also provide a package of "product service packages", the role of which has changed from a product provider to a service provider.

2. Company development strategy

2.1 Vision

The company's business purpose: committed to becoming the world's leading provider of integrated

92 / 450

solutions for intelligent packaging equipment and high-end core parts suppliers; with the mission of becoming an industry group with high influence, customer trust, shareholder trust, and employee respect in its field; adhering to the business philosophy of "integrity, innovation, excellence", to achieve a win-win situation for customers, shareholders, employees and society.

2.2 Development strategy

The transformation and upgrading of enterprises has become a key link for the Chinese economy to go through the old cycle and enter a new cycle to achieve a stable recovery. The company conforms to the development trend of the times, actively implements strategic transformation and management reform measures, adopts an endogenous + epitaxial integration method, continuously strengthens overall planning and prospective deployment, and completes the whole industry of "smart packaging equipment" globally The strategic layout of the chain has realized the global allocation of group resources. At the same time, the company is actively advancing the direction of the new infrastructure and service manufacturing to build an industrial ecological closed loop in the Intelligent Manufacturing Industry 4.0, and continues to explore the upgrade path of China's manufacturing industry from mid-end to high-end.

According to the development plan in the third five-year strategic development period (2018 ~ 2022), the company will use 2020 as a new starting point, adhere to the main business development strategy of focusing on "high-end intelligent equipment", and further promote "synergy", "Extension" and "globalization" development strategies, strengthen, refine, and enlarge the existing main business, at the same time, based on China's global vision, deepen resource allocation, and gradually extend the company's high-end intelligent business equipment business to the entire industry chain , And then realize the strategic transformation from traditional manufacturing enterprises to manufacturing service and innovative manufacturing enterprises.

3. Business plan

3.1Take the intelligent packaging equipment sector as the core, strengthen, refine and enlarge the existing main business

3.1.1 Business model, overall solution

In terms of business model, from providing "products" to laying out an "industrial chain", from manufacturing a single device to providing one-stop procurement services for complete sets of equipment, the company unswervingly follows the development direction of intelligent manufacturing and Industry 4.0 for customers and provides a "smart packaging equipment" overall solution to lead the intelligent development of the entire industry.

Dongfang Precision Corrugated Box Printing Complete Production Line Business: In the future, we will continue to increase the research and development and promotion of new products such as high-end and intelligent linkage lines, continue to strengthen the technology and product development of complete equipment to provide customers with overall solutions, and actively cultivate new achievement growth point. Future development goal: Become a global industry first-line smart corrugated packaging equipment supplier who can rival Bobst.

Dongfang Precision Corrugated Board Production Line Business: The company's Fosber Group will continue to consolidate and maintain its leading edge as a world-leading corrugated board production line related product and technical service provider, continue technological innovation, promote the application of Industry 4.0, and continue to strengthen competitive advantages in whole-line products and other aspects. Future development goal: to surpass BHS and become the world's first high-end corrugated board production line manufacturer.

Based on the huge development potential of China's domestic market and emerging markets, Fosber Asia will adhere to the Asian market, absorb advanced European technologies, take full advantage of China's local manufacturing industry chain, increase technological innovation, and develop products that meet the needs of customers in emerging markets; make full use of China's high-quality supply chain to improve production efficiency, reduce raw materials and delivery costs, achieve high cost-effective core competitive advantages of "big brand quality, inexpensive price", expand the Asian market, and become a strong participant in the Asian market.

3.1.2 Technology innovation, digital transformation

The company is currently actively promoting smart manufacturing upgrades. Its Fosber Group has accumulated considerable experience in industrial 4.0 applications such as intelligent identification, intelligent diagnosis, intelligent correction, and self-learning of corrugated board production lines.

94 / 450

All intelligent applications must be completed based on the collection, analysis and mining of production data. Digital transformation is the only way to achieve intelligent manufacturing.

If Industry 4.0 is abstract and driven by 5G and artificial intelligence technologies, then the digital transformation of manufacturing is endogenous and driven by enterprise value creation.

On the one hand, the operation efficiency and health status of production equipment can be monitored in real time through device digitization, and equipment suppliers can provide various value-added services such as remote diagnosis and technical support; on the other hand, production enterprises can use digital equipment for production organization, Through the digitization of the production process, cloud platform order taking, cost analysis and intelligent scheduling, production automation management, and worker performance management can be achieved to fully improve production efficiency.

With the acceleration of the company's downstream corrugated box packaging industry integration, the continuous improvement of concentration, and the domestic end customers' requirements for the quality, production efficiency, cost efficiency, and delivery speed of corrugated packaging products, large corrugated box factories are increasingly coming The more inclined to purchase medium and high-end corrugated cardboard intelligent packaging production lines.

The company will accelerate its technological innovation, promote the development of equipment digital software systems and the digitalization of intelligent packaging equipment based on years of deep manufacturing experience in the field of intelligent packaging equipment, a deep understanding of downstream customers' production processes, and mature practices of the developed intelligent production management system. upgrade.

Combining the production process process, mass data of production equipment and algorithm analysis and processing, the company will further enhance the intelligence of the company's smart packaging equipment by means of hard and soft integration and integrated output, prompting the upgrading and industry of smart packaging equipment and technology Innovate to meet the equipment upgrade needs of large downstream corrugated carton factories, accelerate the integration of the corrugated box packaging industry from top to bottom The integration of packaging equipment industry and the further increase of concentration.

3.1.3 Service empowerment manufacturing

With the increase of the equipment sold, the company will actively grasp the trend of increasing customer demand for spare parts, after-sales maintenance, and technical support services, and actively develop customer service business. At the same time, on the basis of the continuous deepening of the Fosber Group's Industry 4.0 application, it continuously improves Pro-care and Pro-service and other technical services, and continues to increase the revenue of spare parts sales and technical service support business.

Both Fosber Group and Dongfang Precision (China) have upgraded their customer service centers. In the future, the company will adhere to the strategy of driving equipment sales through services, creating value-added space with services, and increasing the sales of technical services and spare parts.

3.1.4 Global resource allocation

The company focuses on mainstream customers in Europe, America and China with mid-to-high-end equipment products. In the future, it will continue to dig deeper into mainstream markets such as China, Europe and North America. Grasp the huge development opportunities in emerging markets, increase the global market share, realize the global resource allocation of the marketing system and service system, and continue to enhance business synergy in the same business segment.

3.1.5 Strategic layout, industrial chain integration

The company will be down-to-earth, strictly control risks, invest steadily, pay attention to high-quality companies in the global and Chinese industrial chain, implement M & A around the industrial chain according to business development needs and the actual situation of the company, and strengthen the horizontal and vertical integration of the industrial chain. The company will strengthen the strategic layout of the smart packaging equipment business in China, Europe and North America and the global market through strategic mergers and acquisitions.

3.2 Comprehensively promote the implementation of the "synergy" strategy and continuously improve the group operation and group management and control capabilities

96 / 450

Based on the experience and lessons learned from the 2019 Pride incident, the company's board of directors and management deeply understand the importance of group management and control capabilities. In the third five-year strategic development plan, the company has clearly proposed a "synergy strategy", the connotation and purpose of which is to enhance the group's operational capabilities and group management and control capabilities, and to continuously optimize the collaboration between existing business segments.

Specifically, the company will continue to build a value-based group headquarters, continue to strengthen the headquarters and the industry sector in industrial investment, strategic management, risk control, brand management, human resources, financial management, and information management, to provide professional expertise value services such as guidance and resource coordination for subsidiaries.

3.3 Strengthen the resource support for the subsidiary's Parsun Power outboard motor business and support further enlargement and strengthening

As the core power equipment of small and medium-sized watercrafts such as yachts, outboard motors, with the continuous development of emerging markets such as China, and the continuous growth of demand in emerging markets, its sales market and application fields will continue to grow. The market demand will continue to grow. Overall, in emerging markets such as Asia, Oceania, and Latin America, the Chinese market has attracted much attention due to its large market capacity potential and high growth rate.

Parsun Power is the largest supplier of marine power products based on outboard motors in China. According to the company's overall development strategic plan from 2020 to 2022, Dongfang Precision will fully support Parsun Power to further strengthen, refine, and expand the main business of outboard engines, consolidate its competitive advantage in the small horsepower model market, and actively expand medium-horsepower models market, increase market share; in the context of high-end, electrification become the trend of the outboard motor industry, increase investment in research and development, cut into high-horsepower models, develop electric outboard motor technology, become high-end high-horsepower outboard powerful participants in the aircraft and electric outboard motor market; focus on expanding the Chinese market and other emerging markets, launching cost-effective products, continuously increasing market share; strengthening the expansion of outboard motors in new industries and new application markets, and cultivating new business.

At the same time, based on the company's "synergy" development strategy, Dongfang Precision will continue to strengthen its resource support for Parsun Power, further enhance the management synergy between the Group and its subsidiaries, and help Parsun Power optimize sales, branding, R &D, and supply the construction of management systems in areas such as chain, production, information system, human resources, and finance has improved the overall standardized operation level, which in turn helps Parsun Power continue to enhance its comprehensive competitiveness.

4. The risks that the company may face in the development process

4.1 Risk of macroeconomic changes and cyclical fluctuations in downstream industries

In 2020, the uncertainties in the world trade situation and the global macroeconomic slowdown are continuing. The spread of the new coronavirus epidemic around the world in early 2020 has caused a certain impact on the global real economy. Europe and the United States and other countries and regions Under the impact of the epidemic situation, the normal operation in all aspects of society, economy and life has not yet been fully restored.

The transmission of the overall changes in the external macro-economy to the micro level will inevitably be reflected in the changes in the enterprise's capital investment intentions. For Dongfang Precision, there is a close linkage between the main business and the customer market in the downstream industry. If the macroeconomic growth rate continues to slow down in the future, and the operating conditions of downstream manufacturers will decline, it may cause domestic and

foreign industry customers to be more cautious about their capital expenditure requirements, which in turn will have a certain negative impact on the company's order acquisition.

4.2 Risks in globalization and internationalization

With years of development, the company's degree of "globalization" continues to increase. The existing overseas subsidiaries of Dongfang Precision are distributed in countries such as Italy, Spain, the Netherlands and the United States. The company is faced with the problem of how to adapt and be familiar with the overseas legal environment, business environment, and cultural environment, as well as how to better communicate and cooperate with the overseas management team.

After the outbreak of the new coronavirus in 2020, although the domestic epidemic prevention and control situation continued to improve and the production and living order accelerated, the global spread of the epidemic had a major impact on the economic development of countries such as Europe and the United States. Among the operating locations and customer distribution of the company's foreign subsidiaries, the European and American markets occupy an important position. The development of the epidemic situation in Europe and the United States and regions and the changes in the economic restart and recovery are expected to have a certain uncertain impact on the company's foreign subsidiary operations in 2020.

4.3 Fluctuation risk of main raw material prices

The main raw materials required for the manufacturing and production of the company's intelligent packaging equipment are electrical components, standard parts, machined parts, other raw materials and auxiliary materials. During the reporting period, the purchase amount of these main raw materials accounted for a relatively high proportion of the company's main business costs. The production budget arrangement will be greatly affected, and the company will face the risk of rising operating costs and falling gross profit margins, which may adversely affect the company's profitability.

The company will continue to pay attention to fluctuations in the prices of major raw materials, establish supplier strategic cooperation mechanisms, and optimize and upgrade the supply chain management system.

X. Receiving research, communication, interviews and other activities

1. Registration form for receiving research, communication, interviews and other activities during the reporting period

 \Box Applicable $\sqrt{\text{Not applicable}}$

During the reporting period, the company did not receive reception research, communication, interviews and other activities.

Section 5 Important Matters

I. The company's common stock profit distribution and capital accumulation fund transfer to share capital

During the reporting period, the common stock profit distribution policy, especially the formulation, implementation or adjustment of the cash dividend policy

 \checkmark Applicable \square Not applicable

The company has formulated "Guangdong Dongfang Precision Science&Technology Co., Ltd. Dividend Management System" and "Guangdong Dongfang Precision Science&Technology Co., Ltd. Shareholder Return Plan for the Next Three Years (2018-2020)", which clarifies the profit distribution method, cash dividend conditions, cash dividend time and proportion, standardize profit distribution decision-making procedures and procedures for adjusting or changing profit distribution, and can fully protect the legitimate rights and interests of small and medium investors.

During the reporting period, the company's profit distribution policy has not been adjusted.

| Special explanation of cash dividend policy | | | | | |
|--|-----|--|--|--|--|

| icable |
|--------|
| |

The company's common stock dividend distribution plan (preplan) and capital reserve fund to share capital increase plan (preplan) in the past 3 years (including this reporting period)

1. The plan for profit distribution and capital reserve conversion to share capital increase in 2017: based on the total share capital of 1,149,154,435 shares, the company will distribute a cash dividend of RMB 0.45 (including tax) for every 10 shares to all shareholders, and a total of 51,711,949.58 yuan (tax included); The capital reserve fund will be transferred to all shareholders for every 10 shares, and the total number of company shares will be increased to 1,838,647,096 shares after the conversion.

2. Profit distribution plan for 2018: After deliberation and approval by the board of directors, the company plans not to distribute cash dividends in 2018, not to send bonus shares, and not to use the provident fund to increase its share capital.

According to the "Shenzhen Stock Exchange Rules for Listed Companies Repurchasing Shares", if a listed company uses cash as the consideration and buys back shares through an offer method or a centralized auction method, the amount of shares repurchased that year has been implemented as a cash dividend amount and is included in the year Calculation of the relevant proportion of cash dividends.

In 2018, the company repurchased 13,113,660 shares in a centralized auction transaction, accounting for about 0.71% of the company's total share capital, and the total amount paid was about 63.5975 million yuan (excluding transaction costs). In 2018, the company distributed a cash dividend of 63.5975 million yuan by repurchasing shares.

3. The profit distribution plan for 2019: After deliberation and approval by the board of directors, the company plans not to distribute cash dividends in 2019, nor to send bonus shares, nor to convert capital reserve into share capital.

According to the "Shenzhen Stock Exchange Rules for Listed Companies Repurchasing Shares", if a listed company uses cash as the consideration and buys back shares through an offer method or a centralized auction method, the amount of shares repurchased that year has been implemented as a cash dividend amount and is included in the year Calculation of the relevant proportion of cash dividends.

In 2019, the company repurchased 21,886,403 shares in a centralized auction transaction, accounting for approximately 1.19% of the company's total share capital, and the cumulative total amount paid was approximately 96.4915 million yuan (excluding transaction fees). In 2019, the company distributed cash dividends of 96.4915 million yuan by way of share repurchase.

Reasons for changes in shares

 \checkmark Applicable \square Not applicable

1. The non-public issuance of restricted shares in 2016 was listed and circulated on March 4, 2019

On March 4, 2019, Tang Zhuolin, CCIC Investment Co., Ltd., Sheng Ji Equity Investment Fund (Shanghai) Co., Ltd., and Tibet Autonomous Region Investment Co., Ltd. and other companies were 2016 non-public offering targets, and the companies held were

2016 non-public offerings. 98,039,214 shares with restricted sales were lifted.

Among them, Mr. Tang Zhuolin's number of shares released for sale this time was 19,607,843 shares. Mr. Tang Zhuolin currently serves as the company's chairman. During his tenure, he calculates the transferable statutory quota based on 25% of the shares held at the end of the previous year. Therefore, after the lifting of the restricted sales, Mr. Tang Zhuolin 's transferable statutory quota will not change. The shares released this time will be locked by Zhongdeng Company according to law, and the nature of the 19,607,843 shares held by Mr. Tang Zhuolin will change from the restricted shares after the initial launch executives lock stocks.

2. The shares of the company held by the senior executives who left during the reporting period were locked according to law

Mr. Xiang Xianqing has resigned from the company's head of finance since January 11, 2019 due to personal reasons. After resigning, he will not hold other positions in the company. For personal reasons, Ms. Yang Yali resigned from the company's board of directors on January 28, 2019. After resigning, she did not hold other positions in the company. According to the provisions of laws and regulations, the shares of the company held by the above-mentioned personnel shall be locked according to law from the date of declaration of resignation.

3. The register of company shareholders provided by the "issuer E channel" system of China Securities Depository and Clearing Co., Ltd. Shenzhen Branch: during the reporting period, the nature of the shareholders of Peking University, which held more than 5% of the shares, became "state-owned legal person"

After inquiring the company's shareholder register through the "issuer E channel" system of China Securities Depository and Clearing Co., Ltd. Shenzhen Branch, the company found that: During the reporting period, the nature of the shareholders of Pulead, which held more than 5% of the shareholders, changed from "domestic non-state-owned legal person" It is a "state-owned legal person". Regarding the change in the nature of this share, the company has first learned from shareholders Beijing University the reason for the change and the specific situation. As of the date of disclosure of this report, the company has not received any feedback from Peking University regarding this change.

According to relevant regulations, the share data disclosed by listed companies shall be subject to the information contained in the register of shareholders provided by China Securities Depository and Clearing Corporation Limited. The company disclosed the changes in the company's shares during the reporting period based on the register of shareholders provided by China Securities Depository and Clearing Corporation Limited.

4. The shares held by some outgoing executives were released during the reporting period

According to data from the Shenzhen Branch of China Securities Depository and Clearing Co., Ltd., from December 16, 2019, part

152 / 450

of the company's outgoing executives held 100% of the shares held by the company.

Implementation progress of share repurchase

 \checkmark Applicable \square Not applicable

The company held the twenty-fifth meeting of the third board of directors and the second extraordinary general meeting of shareholders on July 2, 2018 and July 27, 2018, respectively, and reviewed and approved the Share Proposal Proposal, agreeing to the company within a 12-month period from the date of consideration and approval of the share repurchase plan at the general meeting of shareholders, to repurchase the company 's shares through a centralized auction transaction, the repurchase price shall not exceed 10 yuan / share, and use its own funds No more than RMB 200 million.

According to the "Implementation Rules for the Repurchase of Shares of Listed Companies on the Shenzhen Stock Exchange" and related requirements, the company convened the 33rd (temporary) meeting of the third session of the Board of Directors on April 8, 2019. The Proposal of Share Repurchase Scheme by Trading Method, the adjusted share repurchase scheme clarifies the upper and lower limits of the total capital of repurchased shares (upper limit is RMB 200 million and the lower limit is RMB 100 million) and the price range of repurchased shares (no More than RMB 6 yuan / share, not less than RMB 3 yuan / share), and clarified the purpose and purpose of the share repurchase (the shares repurchased for the company's equity incentive plan or employee stock ownership plan).

On April 29, 2019, the company received the "Letter on the Provisional Proposal for the Increase of the 2018 Annual General Meeting of Shareholders of Guangdong Dongfang Precision Technology Co., Ltd." from Beiqi Investment, a shareholder holding more than 5% of the shares. Temporary proposal "Proposal on Terminating the Company's Repurchase of Shares". On April 30, 2019, the thirty-seventh (interim) meeting of the third board of directors of the company made a resolution and agreed to submit the interim proposal "Proposal on Terminating the Company's Share Repurchase" to the company's 2018 annual shareholders' meeting for consideration. On May 10, 2019, the company's 2018 annual shareholders' meeting made a resolution, and after the shareholders voted at the meeting, it reviewed and rejected the "Proposal on Terminating the Company's Share Repurchase". The resolution on the share repurchase made by the company's second extraordinary general meeting in 2018 is still legal and valid.

As of the close of business on July 26, 2019, the implementation period of the company's share repurchase expired.

In the interval from July 28, 2018 to July 26, 2019, the company accumulated 35,000,063 shares repurchased in a centralized auction transaction, and the proportion of repurchased shares accounted for about 1.90% of the company's total share capital; the highest turnover of repurchased shares The price is 5.07 yuan / share, the lowest transaction price is 4.14 yuan / share, and the average transaction price is 4.57 yuan / share; the cumulative use of funds to buy back shares is about 160 million yuan.

| Total | 1,634 | | | | |

During the year, the company's remuneration policy continued to be guided by the principles of fixed salary, performance remuneration, job change salary and total amount control, and formed and further improved a competitive comprehensive salary system to retain and attract the talents needed for the company's sustainable development.

1. Set salary by position: Determine the relative value of the position according to the duties of the position, and determine the salary range of the position based on the company's value orientation and the relative value of the position.

2. Performance can be remunerated: the company determines its basic salary part according to the relative value of the position and individual ability; determines the performance salary in the individual salary structure according to the individual performance; adjusts the salary according to the employee's individual ability and comprehensive performance.

3. Job change salary: the salary and job position are strictly matched, and the salary is moved to make the salary system support the career development of employees.

4. The principle of total amount control: The total amount of remuneration should be controlled within the scope recognized by the company. The growth rate of remuneration is lower than the growth rate of sales revenue and profit. Consider the company's ability to pay, so that the company's operating performance supports the growth of total labor costs.

3. Training plan

Dongfang Precision China: The company is equipped with a diverse team of lecturers composed of senior management personnel, backbones of professional skills of various departments and outstanding general skills. Targeted training courses for new employees are 100 days, professional ability courses and general ability courses. A total of 53 training sessions were conducted this year, with a total of 1015 trainees and a total of 332 training hours. Production training takes the form of "teaching with teachers", with different emphasis on the characteristics and needs of employees at different stages of growth. The production training of the high-end smart equipment business is operated in the form of a project system, emphasizing the cultivation of comprehensive competence qualities such as professional competence, creativity, and execution ability of core R & D positions, and focusing on the reserve of senior technical talents. The production training of the core parts business (Parsun Power) adopts a combination of outbound training and internal training, focusing on the systematic inheritance of talents, rapid development and own beneficial practices.

Dongfang Precision's overseas business entity: In 2019, Fosber Group attaches great importance to employee training, especially in terms of work safety, process improvement, technical training and English. A total of 17 training courses have been implemented. The cumulative training market has reached 5,000 hours and more than 400 participants. The training duration of the Tiruna Group also exceeds 5,000 hours, and the employee participation rate exceeds 85%.

Audit Report

All shareholders of Guangdong Dongfang Precision Science & Technology Co., Ltd .:

1. Audit opinion

We audited the financial statements of Guangdong Dongfang Precision Science & Technology Co., Ltd. (hereinafter referred to as "Dongfang Precision"), including the consolidated and parent company's balance sheet on December 31, 2019, the consolidated and parent company's profit statement, consolidation and parent company cash flow statement, consolidated and parent company owner's equity changes statement and notes to related financial statements.

We believe that the attached financial statements have been prepared in accordance with the requirements of the Accounting Standards for Business Enterprises in all material respects, and fairly reflect the financial status of Dongfang Precision's merger and parent company on December 31, 2019 and the 2019 merger and parent company's operating results and cash flow.

2. The basis for forming the audit opinion

We carried out the audit work in accordance with the provisions of the Auditing Standards for Chinese Certified Public Accountants. The "Responsibility of Certified Public Accountants for the Audit of Financial Statements" section of the audit report further elaborated our responsibilities under these standards. In accordance with the Code of Professional Ethics of Chinese Certified Public Accountants, we are independent of Dongfang Precision and fulfill other ethical responsibilities. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

3. Key audit matters

The key audit matters are the matters that we believe are the most important for the audit of the financial statements of the current period based on professional judgment. The response to these matters is based on the audit of the entire financial statements and the formation of audit opinions. We do not express separate opinions on these matters. We determined that the following items are the key audit items that need to be communicated in the audit report.

| Key audit matters | How did the matter respond in the audit |
|--|---|
| (1) Verifying income | |
| Please refer to the accounting policies | For revenue recognition, we perform the following |

| key audit matter. | |

4. Other information

The management team of Dongfang Precision (hereinafter referred to as "management") is responsible for other information. Other information includes the information covered in Dongfang Precision's 2019 annual report, but does not include the financial statements and our audit report.

Our audit opinions on the financial statements do not cover other information, and we do not express any form of assurance conclusions on other information.

In conjunction with our audit of the financial statements, our responsibility is to read other information. In this process, consider whether the other information is significantly inconsistent with the financial statements or what we learned during the audit or it appears that there are major misstatements.

Based on the work we have performed, if we determine that there is a material misstatement of other information, we should report that fact. In this regard, we have nothing to report.

5. Management and governance responsibilities for financial statements

The management is responsible for preparing financial statements in accordance with the Accounting

Standards for Business Enterprises to achieve a fair response, and to design, implement and maintain the necessary internal controls so that there are no major misstatements in the financial statements due to fraud or errors.

In preparing the financial statements, the management is responsible for assessing the ability of Dongfang Precision to continue operations, disclosing matters related to continuing operations (if applicable), and applying the assumption of continuing operations unless liquidation, termination of operations or other practical options are planned.

The governance layer is responsible for overseeing the financial reporting process of Dongfang Precision.

6. Certified Public Accountants' Responsibility for Auditing Financial Statements

Our goal is to obtain reasonable assurance on whether the overall financial statements are free of major misstatements due to fraud or errors, and to issue audit reports containing audit opinions. Reasonable assurance is a high level of assurance, but it does not guarantee that an audit performed in accordance with the auditing standards will always be discovered when a major misstatement exists. Misreporting may be caused by fraud or error. If it is reasonably expected that the misreporting alone or in combination may affect the economic decisions made by users of the financial statements based on the financial statements, the misreporting is generally considered to be significant.

In the process of performing audit work in accordance with auditing standards, we use professional judgment and maintain professional suspicion. At the same time, we also perform the following tasks:

(1) Identify and evaluate the risks of major misstatement of financial statements due to fraud or errors, design and implement audit procedures to deal with these risks, and obtain sufficient and appropriate audit evidence as the basis for issuing audit opinions. Since fraud may involve collusion, forgery, intentional omissions, misrepresentation, or overriding internal control, the risk of failing to detect major misstatements due to fraud is higher than the risk of failing to detect major

misstatements due to errors.

(2) To understand the internal control related to auditing in order to design appropriate auditing procedures, but the purpose is not to express an opinion on the effectiveness of internal control.

(3) Evaluate the appropriateness of management's selection of accounting policies and the rationality of accounting estimates and related disclosures.

(4) To draw conclusions on the appropriateness of management's use of continuous operation assumptions. At the same time, based on the audit evidence obtained, it is concluded whether there are significant uncertainties in matters or situations that may cause significant doubts about the ability of Dongfang Precision to continue to operate. If we conclude that there is significant uncertainty, the auditing standards require us to draw the attention of the users of the statements to the relevant disclosures in the financial statements in the audit report; if the disclosures are insufficient, we should issue a non-unqualified opinion. Our conclusion is based on the information available as of the date of the audit report. However, future events or circumstances may prevent Dongfang Precision from continuing its operations.

(5) Evaluate the overall presentation (including disclosure), structure and content of the financial statements, and evaluate whether the financial statements fairly reflect related transactions and events.

(6) Obtain sufficient and appropriate audit evidence on the financial information of the entities or business activities in Dongfang Precision to express audit opinions on the financial statements. We are responsible for guiding, supervising and executing group audits, and assume full responsibility for audit opinions.

We communicate with the management on the planned audit scope, schedule and major audit findings, including the internal control deficiencies that we identified in the audit that are worthy of attention.

We also provide a statement to the governance regarding compliance with professional ethics requirements related to independence, and communicate with the governance about all relationships and other matters that may be reasonably considered to affect our independence, as well as related preventive measures (if applicable).

From the matters communicated with the governance layer, we determine which matters are most important for the audit of the financial statements of the current period and thus constitute key audit matters. We describe these matters in the audit report, unless laws and regulations prohibit public disclosure of these matters, or in rare cases, if it is reasonably expected that the negative consequences of communicating an event in the audit report exceed the benefits in the public interest, we determine the matter should not be communicated in the audit report.

| Tiruna UK Ltd | British Pound |
| Tiruna US | US DOLLARS |

5. The accounting treatment of business combination under the same control and non-same control.

Business merger under the same control: the assets and liabilities acquired by the merging party in the business combination shall be measured according to the book value of the assets and liabilities of the merged party (including the goodwill formed by the acquisition of the merged party by the ultimate controlling party) in the consolidated financial statements of the ultimate controlling party on the merger date. The difference between the book value of the net assets obtained in the merger and the book value of the consolidated consideration paid (or the total par value of the shares issued) shall be adjusted, the equity premium in the capital reserve shall be adjusted, and if the equity premium in the capital reserve is insufficient to be offset, the retained earnings shall be adjusted.

Business merger under different control: on the date of purchase, the assets paid and liabilities incurred or assumed by the purchaser as consideration for the merger shall be measured at fair value, and the difference between the fair value and its book value shall be recorded into the profits and losses of the current period. The difference of the fair value share of the identifiable net assets obtained by the purchaser in the merger shall be recognized as goodwill if the merger cost is greater than the fair value share of the identifiable net assets obtained in the merger; the merger cost shall be less than the difference in the fair value share of the identifiable net assets acquired in the merger and shall be recorded in the profits and losses of the current period.

The directly related expenses incurred for the business merger shall be recorded into the profits and losses of the current period when they occur; the transaction costs for issuing equity securities or debt securities for the enterprise merger shall be included in the initial recognition amount of the equity securities or debt securities.

6. The method of compiling consolidated financial statements.

1. Merge scope.

The consolidated scope of the consolidated financial statements is determined on the basis of control, which includes the Company and all subsidiaries.

2 Merge program.

The company prepares consolidated financial statements on the basis of the financial statements of itself and its subsidiaries and on the basis of other relevant information. The company prepares consolidated financial statements and regards the entire enterprise group as an accounting entity, in accordance with the recognition, measurement and presentation requirements of the relevant enterprise accounting standards and in accordance with unified accounting policies, reflect the overall financial position, operating results and cash flow of the enterprise group.

If the accounting policies and accounting periods adopted by all subsidiaries included in the consolidated financial statements are consistent with those of the company, if the accounting policies and accounting periods adopted by the subsidiaries are inconsistent with those of the company, necessary adjustments shall be made in accordance with the company's accounting policies and accounting periods when preparing the consolidated financial statements. For subsidiaries acquired by non-merger under the same control, the financial statements shall be adjusted on the basis of the fair value of identifiable net assets on the date of purchase. For a subsidiary acquired by a merger under the same control, the financial statements shall be adjusted on the basis of the goodwill formed by the acquisition of the subsidiary by the ultimate controlling party) in the financial statements of the ultimate controlling party.

The minority shareholders' shares of subsidiary owners' equity, current net profit and loss and current comprehensive income are separately shown under the owner's equity item in the consolidated balance sheet, under the net profit item in the consolidated income statement and under the total comprehensive income item. The current loss shared by the minority shareholders of the subsidiary exceeds the balance formed by the minority shareholders' share in the initial owner's equity of the subsidiary, deducting the minority shareholders' rights and interests.

(1) Increase the number of subsidiaries or businesses.

During the reporting period, if a subsidiary or business is increased as a result of a business merger under the same control, the beginning of the consolidated balance sheet shall be adjusted, and the income, expenses and profits of the subsidiary or business combination from the beginning of the current period to the end of the reporting period shall be included in the consolidated income statement. The cash flow from the beginning of the current period to the end of the subsidiary or business combination of the subsidiary or business combination statement. The cash flow from the beginning of the current period to the end of the reporting period of the subsidiary or business combination shall be included in the consolidated cash flow statement, and the relevant items of the comparative statement shall be adjusted as if the combined report subject has been in existence since the final control party began to control.

If it is possible to control the investee under the same control due to additional investment and other reasons, the parties involved in the merger shall be deemed to adjust in their current state when the final controlling party begins to control. For equity investments held prior to the acquisition of control of the merged party, the relevant profit and loss, other comprehensive income and other changes in net assets have been recognized between the date of acquisition of the original equity and the date of control of the merged party and the merged party, the changes in profit and loss, other comprehensive income and other net assets have been offset against the initial retained earnings or current profits and losses in the comparative statement period, respectively.

During the reporting period, if a subsidiary or business is increased as a result of a merger not under the same control, the beginning of the consolidated balance sheet period shall not be adjusted; the income, expenses and profits of the subsidiary or business from the purchase date to the end of the reporting period shall be included in the consolidated income statement; the cash flow of the subsidiary or business from the purchase date to the end of the purchase date to the end of the reporting period shall be included in the consolidated cash flow statement.

If it is possible to control the investee who is not under the same control due to additional investment and other reasons, the company shall re-measure the equity held before the purchase date according to the fair value of the

equity on the purchase date, the difference between the fair value and its book value shall be included in the investment income of the current period. Where the equity held by the acquiree before the date of purchase involves changes in other comprehensive income under the equity method and other owners' equity except net profit and loss, other comprehensive income and profit distribution, the related changes in other comprehensive income and profit distribution, the related changes in other comprehensive income and profit distribution income of the current period on the date of purchase, Except for other comprehensive income arising from the re-measurement of net liabilities or changes in net assets of the benefit plan by the invested party.

(2) Disposal of subsidiaries or businesses.

1 General treatment methods.

If the company disposes of a subsidiary or business during the reporting period, the income, expenses and profits of the subsidiary or business from the beginning of the business period to the disposal date shall be included in the consolidated income statement; the cash flow from the beginning of the business period to the disposal date of the business period shall be included in the consolidated cash flow statement.

When the control over the investee is lost due to the disposal of part of the equity investment or other reasons, the company shall re-measure the remaining equity investment after disposal according to its fair value at the date of loss of control. The sum of the consideration obtained from the disposal of the shares and the fair value of the remaining shares minus the difference between the share of the net assets and the goodwill that should be continuously calculated by the original subsidiary from the date of purchase or merger, it shall be included in the investment income of the period in which the control is lost. Other comprehensive income related to the equity investment of the original subsidiary or other changes in owners' equity except net profit and loss, other comprehensive income and profit distribution shall be converted into current investment income when control is lost, with the exception of other comprehensive income arising from the re-measurement of the net liabilities or changes in net assets of the benefit plan of the invested party.

If the company loses control due to the decrease in the proportion of shares held by the company as a result of the increase in capital of the subsidiary by other investors, the accounting treatment shall be carried out in accordance with the above-mentioned.

2 Disposal of subsidiaries step by step.

If the equity investment in a subsidiary is disposed of step by step through multiple transactions until the loss of control, the terms, conditions and economic impact of the disposal of each transaction in the equity investment of the subsidiary conform to one or more of the following situations, it is usually indicated that multiple transactions should be treated as a package of transactions:

I. These transactions are entered into at the same time or taking into account the influence of each other;

II. These transactions as a whole can achieve a complete business result;

III. The occurrence of a transaction depends on the occurrence of at least one other transaction;

A transaction is uneconomical on its own, but it is economical when it is considered with other transactions.

Where the disposal of each transaction of equity investment in a subsidiary until the loss of control belongs to a package transaction, the company shall treat each transaction as a transaction of disposal of the subsidiary and loss of control; However, before the loss of control, the difference between the disposal price and the share of the net assets of the subsidiary corresponding to the disposal investment shall be recognized as other comprehensive income in the consolidated financial statements, when the loss of control is transferred to the profit or loss of the period in which the control is lost.

Where the disposal of all transactions on the equity investment of a subsidiary until the loss of control is not a package transaction, before the loss of control, accounting treatment shall be carried out according to the relevant policies of partial disposal of the equity investment of the subsidiary without the loss of control; in the event of loss of control, accounting treatment shall be carried out in accordance with the general treatment method of disposing of the subsidiary.

(3) Purchase minority shares in subsidiaries.

The difference between the company's newly acquired long-term equity investment in the purchase of minority shares and the share of net assets that should be continuously calculated by the subsidiary from the date of purchase (or merger date), adjust the equity premium in the capital reserve in the consolidated balance sheet, and if the equity premium in the capital reserve is insufficient to offset, the retained earnings shall be adjusted.

(4) Partial disposal of equity investment in subsidiaries without losing control.

Without losing control, the difference between the disposal price obtained from the partial disposal of the long-term

equity investment in the subsidiary and the disposal of the long-term equity investment corresponds to the share of the net assets continuously calculated by the subsidiary since the date of purchase or merger, the equity premium in the capital reserve in the consolidated balance sheet shall be adjusted, and if the equity premium in the capital reserve is insufficient to be offset, the retained earnings shall be adjusted.

7. Classification of joint venture arrangement and accounting treatment of joint operation.

Joint venture arrangements are divided into joint ventures and joint ventures.

When the company is a joint venture party to the joint venture arrangement, it is a joint operation when it enjoys the relevant assets and bears the relevant liabilities of the joint venture arrangement.

The company recognizes the following items related to the share of interests in the joint operation, and carries out accounting treatment in accordance with the provisions of the relevant accounting standards for enterprises:

(1) to recognize the assets held separately by the Company and the assets jointly held according to the share of the Company;

(2) to recognize the liabilities borne separately by the Company and the liabilities jointly borne according to the share of the Company;

(3) to recognize the income generated from the sale of the company's share of joint operating output;

(4) to recognize the income generated by the joint operation from the sale of output according to the share of the company;

(5) to recognize the expenses incurred separately and the expenses incurred by the joint operation according to the share of the company.

The company's accounting policy on joint venture investment can be found in this note "V, (XIII) long-term equity investment".

8. Criteria for determining cash and cash equivalents.

When preparing the statement of cash flows, the cash in stock of the company and the deposits that can be used for

payment at any time shall be recognized as cash. Investments with short term (due within three months from the date of purchase), strong liquidity, easy to convert into known cash and low risk of value change are identified as cash equivalents.

9. Conversion of foreign currency business and foreign currency statements.

1. Foreign currency business.

The foreign currency business uses the spot exchange rate on the date of the transaction as the conversion rate to convert the amount of foreign currency into RMB for bookkeeping.

The balance of foreign currency monetary items on the balance sheet date is converted at the spot exchange rate on the balance sheet date, and the resulting exchange differences, except for the exchange differences arising from special foreign currency loans related to the acquisition and construction of assets that meet the capitalization conditions, shall be recorded into the profits and losses of the current period except for the exchange differences arising from special foreign currency loans related to the acquisition and construction of assets that meet the capitalization conditions in accordance with the principle of capitalization of borrowing costs.

2. Conversion of foreign currency financial statements.

The assets and liabilities in the balance sheet shall be converted at the spot exchange rate on the balance sheet date; except for the "undistributed profit" items, other items shall be converted at the spot exchange rate at the time of occurrence. The income and expense items in the income statement shall be converted at the spot exchange rate on the date of the transaction.

When disposing of an overseas operation, the difference in the translation of the foreign currency financial statements related to the overseas operation shall be transferred from the owner's equity project to the disposal of the profits and losses of the current period.

10. Financial instruments.

Financial instruments include financial assets, financial liabilities and equity instruments.

1. Classification of financial instruments.

Accounting policies applicable as of January 1, 2019.

According to the business model of the Company's management of financial assets and the contractual cash flow characteristics of financial assets, at the time of initial recognition, financial assets are classified as financial assets measured at amortised cost, financial assets (debt instruments) measured at fair value and their changes included in other comprehensive income, and financial assets measured at fair value and their changes included in the profits and losses of the current period.

The business model aims to collect the contract cash flow and the contract cash flow is only the payment of principal and interest based on the outstanding principal amount, which is classified as financial assets measured at amortised cost. Where the business model aims to receive both the contractual cash flow and the sale of the financial asset, and the contractual cash flow is only the payment of principal and interest based on the outstanding principal amount, it is classified as financial assets (debt instruments) that are measured at fair value and whose changes are included in other comprehensive income; other financial assets are classified as financial assets measured at fair value and whose changes are included in the profits and losses of the current period.

For investments in non-transactional equity instruments, the Company determines at the initial recognition whether they are designated as financial assets (equity instruments) that are measured at fair value and whose changes are included in other comprehensive income. At the time of initial recognition, in order to eliminate or significantly reduce accounting mismatch, financial assets can be designated as financial assets measured at fair value and whose changes are included in the profits and losses of the current period.

At the time of initial recognition, financial liabilities are classified as: financial liabilities measured at fair value and their changes included in the profits and losses of the current period and financial liabilities measured at amortized cost.

Financial liabilities that meet one of the following conditions may, at the time of initial measurement, be designated as financial liabilities measured at fair value and whose changes are included in the profits and losses of the current period: 1) this designation can eliminate or significantly reduce accounting mismatch.

2) to manage and evaluate the financial liability portfolio or the financial asset and financial liability portfolio on the basis of fair value in accordance with the enterprise risk management or investment strategy set out in the official written document, and report to key managers within the enterprise on this basis.

3) the financial liability includes embedded derivatives that need to be split separately.

Accounting policies applicable before January 1, 2019.

Financial assets and financial liabilities are classified at the time of initial recognition as: financial assets or financial liabilities measured at fair value and whose changes are included in the profits and losses of the current period, including transactional financial assets or financial liabilities and financial assets or financial liabilities directly designated to be measured at fair value and whose changes are included in the profits and losses of the current period; investments held to maturity; receivables; available-for-sale financial assets; other financial liabilities, etc.

2. Confirmation basis and Measurement method of Financial Instruments.

Accounting policies applicable as of January 1, 2019.

(I) Financial assets measured at amortized cost.

Financial assets measured at amortized cost, including notes receivable, accounts receivable, other receivables, long-term receivables, debt investments, etc., are initially measured at fair value, and the relevant transaction costs are included in the initial recognition amount; accounts receivable that does not include a significant financing component and the company decides not to consider accounts receivable with financing components not exceeding one year shall be initially measured at the contract transaction price.

The interest calculated by the effective interest rate method during the holding period shall be recorded in the profits and losses of the current period.

At the time of recovery or disposal, the difference between the price obtained and the book value of the financial asset shall be recorded into the profits and losses of the current period.

(2) Financial assets (debt instruments) that are measured at fair value and whose changes are included in other comprehensive income.

Financial assets (debt instruments) measured at fair value and whose changes are included in other comprehensive income, including accounts receivable financing, other debt investments, etc., shall be initially measured at fair value, and the relevant transaction costs shall be included in the initial recognition amount. The financial asset is subsequently measured at fair value, and changes in fair value are included in other comprehensive income except for interest, impairment losses or gains and exchange gains and losses calculated by the effective interest rate method.

When the recognition is terminated, the accumulated gains or losses previously included in other comprehensive income are transferred from other comprehensive income and included in the profits and losses of the current period.

(3) Financial assets (equity instruments) that are measured at fair value and whose changes are included in other comprehensive income.

Financial assets (equity instruments) measured at fair value and whose changes are included in other comprehensive income, including investments in other equity instruments, shall be initially measured at fair value, and the relevant transaction costs shall be included in the initial recognition amount. The financial assets are subsequently measured at fair value, and changes in fair value are included in other comprehensive income. The dividends earned shall be recorded in the profits and losses of the current period.

At the time of termination of recognition, the cumulative gains or losses previously included in other comprehensive income are transferred from other comprehensive income and included in retained earnings.

(4) Financial assets measured at fair value and whose changes are included in the profits and losses of the current period.

Financial assets measured at fair value and whose changes are included in the profits and losses of the current period

include transactional financial assets, derivative financial assets and other non-current financial assets, which are initially measured at fair value, and the relevant transaction costs are recorded in the profits and losses of the current period. The financial assets are subsequently measured at fair value, and the changes in fair value are recorded in the profits and losses of the current period.

(5) Financial liabilities measured at fair value and whose changes are included in the profits and losses of the current period.

Financial liabilities measured at fair value and whose changes are included in the profits and losses of the current period include transactional financial liabilities, derivative financial liabilities, etc., which are initially measured at fair value, and the relevant transaction costs are recorded in the profits and losses of the current period. The financial liability is subsequently measured at fair value, and the change in fair value is recorded in the profits and losses of the current period.

When the recognition is terminated, the difference between the book value and the consideration paid shall be recorded in the profits and losses of the current period.

(6) Financial liabilities measured at amortized cost.

Financial liabilities measured at amortized cost include short-term loans, notes payable, accounts payable, other payables, long-term loans, bonds payable and long-term payables, which are initially measured at fair value, and the relevant transaction costs are included in the initial recognition amount.

The interest calculated by the effective interest rate method during the holding period shall be recorded in the profits and losses of the current period.

When the recognition is terminated, the difference between the consideration paid and the book value of the financial liability shall be recorded into the profits and losses of the current period.

Accounting policies applicable before January 1, 2019.

(1) Financial assets (financial liabilities) that are measured at fair value and whose changes are included in the 263/450

profits and losses of the current period.

At the time of acquisition, the fair value (deducting cash dividends declared but not yet paid or interest on bonds that have been paid but not yet received) is taken as the initial recognized amount, and the relevant transaction costs are recorded in the profits and losses of the current period.

During the holding period, the interest or cash dividend earned will be recognized as investment income, and the change in fair value will be included in the profit or loss of the current period at the end of the period.

At the time of disposal, the difference between the fair value and the initial amount recorded shall be recognized as investment income, and the profit or loss of fair value changes shall be adjusted at the same time.

(2) hold-to-maturity investment.

The sum of the fair value (deducting the interest on the bonds that have reached the interest payment date but not yet received) and the relevant transaction costs shall be taken as the initial recognized amount at the time of acquisition.

During the holding period, the recognized interest income shall be calculated according to the amortized cost and the effective interest rate, which shall be included in the investment income. The effective interest rate is determined at the time of acquisition and remains unchanged for the expected duration or for such shorter period as may be applicable.

At the time of disposal, the difference between the price obtained and the book value of the investment shall be included in the investment income.

(3) accounts receivable.

The company's claims receivable resulting from the sale of goods or the provision of labor services, and the claims of other enterprises held by the company, which do not include debt instruments quoted in the active market, including notes receivable, accounts receivable, other receivables, long-term receivables, etc., shall take the contract or agreement price receivable from the buyer as the initial recognition amount; if it is of a financing nature, it shall be initially recognized according to its present value.

At the time of recovery or disposal, the difference between the price obtained and the book value of the receivables shall be recorded into the profits and losses of the current period.

(4) available-for-sale financial assets.

At the time of acquisition, the sum of the fair value (deducting the declared but not yet paid cash dividends or the interest on bonds that have reached the interest payment date but not yet received) and the relevant transaction costs is taken as the initial recognized amount.

The interest or cash dividend earned during the holding period is recognized as investment income. At the end of the period, it is measured at fair value and changes in fair value are included in other comprehensive income. However, investments in equity instruments that are not quoted in an active market and whose fair value cannot be measured reliably, and derivative financial assets linked to the equity instrument and settled through the delivery of the equity instrument, are measured at cost.

At the time of disposal, the difference between the price obtained and the book value of the financial asset shall be included in the investment profit and loss; at the same time, the amount of the cumulative amount of fair value changes originally directly included in other comprehensive income corresponding to the disposal part shall be transferred out and included in the profit and loss of the current period.

(5) other financial liabilities.

The sum of its fair value and related transaction costs shall be taken as the initial recognized amount. The amortized cost is used for follow-up measurement.

3. Confirmation basis and Measurement method of Financial assets transfer.

When a company transfers financial assets, if almost all the risks and rewards in the ownership of the financial assets have been transferred to the transferee, the recognition of the financial assets shall be terminated; if almost all the risks and rewards in the ownership of the financial assets are retained, the recognition of the financial asset shall not be terminated.

In judging whether the transfer of financial assets meets the above-mentioned conditions for termination of recognition of financial assets, the principle of substance over form shall be adopted.

The company divides the transfer of financial assets into the overall transfer and partial transfer of financial assets.

If the overall transfer of financial assets meets the conditions for termination of recognition, the difference between the following two amounts shall be recorded into the profits and losses of the current period:

(1) the book value of the transferred financial assets;

(2) the sum of the consideration received as a result of the transfer and the cumulative amount of changes in fair value that were originally directly included in the owners' equity (the financial assets involved in the transfer are financial assets (debt instruments) whose changes are measured at fair value and whose changes are included in other comprehensive income, and financial assets available for sale.

If the partial transfer of financial assets meets the conditions for termination of recognition, the book value of the transferred financial assets as a whole shall be apportioned according to their respective relative fair values between the terminated recognition part and the unterminated recognition part, and the difference between the following two amounts shall be included in the profits and losses of the current period:

(1) to terminate the book value of the recognition part;

(2) the consideration of the termination recognition part, the sum of the amount corresponding to the cumulative amount of fair value changes that were originally directly included in the owners' equity (the financial assets involved in the transfer are financial assets (debt instruments) whose changes are measured at fair value and whose changes are included in other comprehensive income, financial assets available for sale.

If the transfer of a financial asset does not meet the conditions for termination of recognition, the financial asset shall continue to be recognized, and the consideration received shall be recognized as a financial liability.

4. Conditions for termination of recognition of financial liabilities.

If the current obligation of a financial liability has been discharged in whole or in part, the recognition of the financial liability or part thereof shall be terminated; if the Company signs an agreement with the creditors to replace the existing financial liability by assuming a new financial liability, and if the contract terms of the new financial liability are substantially different from those of the existing financial liability, the recognition of the existing financial liability shall be terminated and the new financial liability shall be recognized at the same time.

Where substantial changes are made to all or part of the terms of the contract for the existing financial liabilities, the recognition of the existing financial liabilities or part of them shall be terminated, and the financial liabilities after the revised terms shall be recognized as a new financial liability.

When the recognition of financial liabilities is terminated in whole or in part, the difference between the book value of the financial liabilities terminated and the consideration paid (including transferred non-cash assets or new financial liabilities assumed) shall be included in the profits and losses of the current period.

If the company buys back part of the financial liability, it shall allocate the book value of the financial liability as a whole according to the relative fair value of the continued recognition part and the termination recognition part on the repurchase date. The difference between the book value allocated to the termination of recognition and the consideration paid (including transferred non-cash assets or new financial liabilities assumed) shall be included in the profits and losses of the current period.

5. The method of determining the fair value of financial assets and financial liabilities.

There are financial instruments in an active market, whose fair value is determined by quotations in the active market. There are no financial instruments that activate the market, and valuation techniques are used to determine their fair value. In valuation, the Company adopts valuation techniques that are applicable in the current circumstances and are supported by sufficient available data and other information, select input values that are consistent with the characteristics of assets or liabilities considered by market participants in the transactions of the relevant assets or liabilities, and give priority to the relevant observable inputs. The unobservable input value is used only if the relevant observable input value cannot be obtained or is impracticable.

6. Test method and Accounting treatment method of impairment of Financial assets.

Accounting policies applicable as of January 1, 2019.

The Company takes into account all reasonable and justified information, including forward-looking information, estimates, individually or in combination, the expected credit losses of financial assets measured at amortised cost and financial assets (debt instruments) measured at fair value and whose changes are included in other comprehensive income. The measurement of expected credit loss depends on whether the credit risk of financial 267/450

assets increases significantly after the initial recognition.

If the credit risk of the financial instrument has increased significantly since the initial recognition, the Company measures its loss provision at the amount equivalent to the expected credit loss of the financial instrument throughout its lifetime; if the credit risk of the financial instrument does not increase significantly since the initial recognition, the Company measures its loss provision at the amount equivalent to the expected credit loss of the financial instrument in the next 12 months. The increase or reversal amount of the loss provision resulting therefrom shall be recorded into the profit or loss of the current period as an impairment loss or gain.

Usually more than 30 days overdue, the Company considers that the credit risk of the financial instrument has increased significantly, unless there is conclusive evidence that the credit risk of the financial instrument has not increased significantly since the initial recognition.

If the credit risk of a financial instrument is low on the balance sheet date, the Company considers that the credit risk of the financial instrument has not increased significantly since its initial recognition.

If there is objective evidence that a financial asset has been impaired in credit, the company shall make provision for impairment of the financial asset on an individual basis.

(1) Impairment of receivables.

1 Accounts receivable.

For accounts receivable, regardless of whether it is due to the sale of products or the provision of services or contains a significant financing component, the Company always measures its loss provision at an amount equivalent to the expected credit loss over the entire lifetime, the resulting increase or reversal of the loss provision is recorded in the profits and losses of the current period as an impairment loss or gain.

Based on all reasonable and valid information, including forward-looking information, the company makes provision for bad debts for accounts receivable in accordance with the combination of related parties and the combination of age analysis within the scope of merger, and the combination of related parties within the scope of merger does not make provision for bad debts, the combination of age analysis calculates its expected credit loss on the basis of age, as follows:

| Account age | Proportion of accounts receivable (%) | | |
|-------------------------------------|--|----------------------|-----------------------------|
| | Corrugated board line related business | Power engine service | New energy battery business |
| Within 1 year (including 1 year) | 1.00 | 5.00 | 1.00 |
| 1 to 2 years (including 2 years) | 5.00 | 10.00 | 10.00 |
| 2 to 3 years (including 3 years) | 10.00 | 30.00 | 30.00 |
| 3 to 4 years (including 4 years) | 30.00 | 50.00 | 100.00 |
| 4 to 5 years (including 5 years) | 50.00 | 80.00 | 100.00 |
| More than 5 years | 100.00 | 100.00 | 100.00 |

If there is objective evidence that a credit impairment has occurred in an account receivable,

the company makes a provision for bad debts and recognizes the expected credit loss on the account receivable.

⁽²⁾Other receivables

Other receivables are based on the assumption that their credit risk has not increased significantly since the initial recognition, and the loss provision is measured according to the expected credit loss over the next 12 months. In addition to other receivables for individual assessment of credit risk, they are divided into different combinations based on the characteristics of credit risk:

| Combination name. | Provision ratio. |
|--|--|
| Account age analysis combination. | Using age analysis method. |
| Combination of related parties within the scope of merger. | Excluding the provision for bad debts. |
| Risk-free portfolio. | Excluding the provision for bad debts |

In the combination, the age analysis combination calculates its expected credit loss on the basis of book age, as follows:

| Account age | Proportion of accounts receivable (%) | | |
|-------------------------------------|---|----------------------|-----------------------------|
| | Corrugated board line related business | Power engine service | New energy battery business |
| Within 1 year (including 1 year) | 1.00 | 5.00 | 1.00 |
| 1 to 2 years (including 2 years) | 5.00 | 10.00 | 10.00 |
| 2 to 3 years (including 3 years) | 10.00 | 30.00 | 30.00 |
| 3 to 4 years (including 4 years) | 30.00 | 50.00 | 100.00 |
| 4 to 5 years (including 5 years) | 50.00 | 80.00 | 100.00 |
| More than 5 years | 100.00 | 100.00 | 100.00 |

(2) Other receivables.

For lease receivables or long-term receivables formed by the company through the sale of goods or the provision of services, the Company chooses to always measure its provision for loss at an amount equivalent to the expected credit loss over the entire lifetime.

The negotiable instruments obtained by the company shall be divided into financial institutions and other enterprises according to the acceptor. If the acceptor is a negotiable instrument of a financial institution, the company expects no credit loss; if the acceptor is a negotiable instrument of other enterprises, the company regards the negotiable instrument as accounts receivable to determine the expected credit loss.

Accounting policies applicable before January 1, 2019.

Except for the financial assets measured at fair value and whose changes are included in the profits and losses of the current period, the company examines the book value of the financial assets on the balance sheet date, and if there is objective evidence that a certain financial asset is impaired, provision for impairment shall be made.

(1) Provision for impairment of available-for-sale financial assets:

If at the end of the period there is a serious decline in the fair value of the investment in available-for-sale equity instruments, or if such a downward trend is expected to be non-temporary after a comprehensive consideration of various relevant factors, it shall be deemed that the impairment has occurred, and the cumulative loss caused by the decline in the fair value of the owner's equity originally directly included in the owner's equity shall be transferred out together to recognize the impairment loss.

For available-for-sale debt instruments that have recognized impairment losses, if the fair value has increased in the subsequent accounting period and is objectively related to the events that occurred after the recognition of the original impairment loss, the originally recognized impairment loss shall be reversed and recorded in the profits and losses of the current period.

The impairment loss on the investment of available-for-sale equity instruments shall not be reversed through profit or loss.

(2) Provision for bad debts of receivables:

٢

1 Receivables with significant individual amounts and separate provisions for bad debts:

The basis or standard for judging the significant amount of a single item:

Accounts for more than 10% (including 10%) of the balance of accounts receivable or other receivables.

The method of calculating the provision for bad debts with a large amount and a separate provision for bad debts:

If the impairment test is carried out separately, if there is objective evidence that the impairment has occurred, the provision for bad debts shall be made according to the difference between the present value of the expected future cash flow and its book value, which shall be included in the profits and losses of the current period. Separately test the receivables without impairment and classify them into the corresponding combination to make provision for bad debts.

(2) to calculate the provision for bad debt receivables according to the combination of credit risk characteristics:

| A method of calculating and allocating provision for Bad debts according to the combination of Credit risk characteristics. | | | | | |
|---|--|--|--|--|--|
| Age analysis combination. Using age analysis method. | | | | | |
| Combination of related parties within the scope of | Excluding the provision for bad debts. | | | | |
| merger. | | | | | |
| Risk-free portfolio. | Excluding the provision for bad debts. | | | | |

In the combination, the age analysis method is used to make provision for bad debts:

| Account age | Corrugated board line related | Power engine | New energy battery |
|----------------------------|-------------------------------|--------------|--------------------|
| | business(%) | service(%) | business(%) |
| Within 1 year (including 1 | 1.00 | 5.00 | 1.00 |

| year) | | | |
|----------------------------------|--------|--------|--------|
| 1 to 2 years (including 2 years) | 5.00 | 10.00 | 10.00 |
| 2 to 3 years (including 3 years) | 10.00 | 30.00 | 30.00 |
| 3 to 4 years (including 4 years) | 30.00 | 50.00 | 100.00 |
| 4 to 5 years (including 5 years) | 50.00 | 80.00 | 100.00 |
| More than 5 years | 100.00 | 100.00 | 100.00 |

③ Receivables in which a single amount is not significant but a separate provision for bad debts is made:

Reasons for making separate provisions for bad debts:

There is objective evidence that impairment may occur, such as cancellation, bankruptcy or death of the debtor, unable to recover his bankruptcy property or estate after liquidation, serious lack of cash flow, and so on.

The method of calculating the provision for bad debts:

For receivables that have objective evidence that impairment may have occurred, separate them from the relevant portfolio and test the impairment separately. According to the difference between the present value of future cash flow and its book value, the impairment loss is confirmed and the provision for bad debts is made.

(3) Provision for impairment of investments held to maturity:

The measurement of the impairment loss of investment held to maturity shall be treated in accordance with the measurement method of impairment loss of accounts receivable.

11. Inventory.

1. Classification of inventory.

Inventory is classified into: raw materials, products in process, goods in stock, goods issued, semi-finished products,

materials commissioned for processing, etc.

2. Pricing method for issuing inventory.

The costs of inventory, delivery and production include raw materials, direct labour, other direct costs and indirect production costs apportioned in proportion to normal production capacity, as well as related interest expenses. The purchase and storage of all kinds of inventory are priced at actual cost and issued on a weighted average basis.

3. The basis for determining the net realizable value of different types of inventory.

In the course of normal production and operation, the net realizable value of goods directly used for sale, such as finished goods, goods in stock and materials used for sale, shall be determined on the basis of the estimated selling price of the inventory minus the estimated sales expenses and related taxes and fees. For the inventory of materials that need to be processed, in the normal process of production and operation, the net realizable value shall be determined on the basis of the estimated selling price of the finished goods produced minus the estimated cost to be incurred at the time of completion, the estimated sales expenses and the amount of relevant taxes and fees. The net realizable value of the inventory held for the execution of the sales contract or labor contract is calculated on the basis of the contract price. If the quantity of the inventory held exceeds the quantity ordered under the sales contract, the net realizable value of the excess inventory is calculated on the basis of the general sales price.

At the end of the period, provision for inventory decline is made according to a single inventory item; however, for inventory with a large number and lower unit price, provision for inventory decline is made according to inventory category; inventory with the same or similar end-use or purpose related to product lines produced and sold in the same region and difficult to be measured separately from other items shall be combined with the provision for inventory decline.

Except that there is clear evidence that the market price on the balance sheet date is abnormal, the net realizable value of inventory items is determined on the basis of the market price on the balance sheet date.

The net realizable value of the inventory items at the end of the period is determined on the basis of the market price on the balance sheet date.

4. Inventory system.

The perpetual inventory system is adopted.

5. Amortization methods for low-value consumables and packaging.

The main results are as follows: (1) the method of one-time resale is adopted for low-value consumable goods;

(2) the package adopts the method of one-time resale.

12. Hold assets for sale.

The company classifies non-current assets or disposal groups that meet the following conditions into categories of holding for sale:

(1) in accordance with the practice of selling such assets or disposal groups in similar transactions, they can be sold immediately under the current circumstances;

(2) the sale is very likely to occur, that is, the Company has made a decision on a sale plan and has obtained a firm purchase commitment, and the sale is expected to be completed within one year. If the relevant regulations require the relevant authorities or regulatory authorities of the company to approve the sale, it has been approved.

13. Long-term equity investment.

1. Criteria for judging joint control and significant influence.

Joint control refers to the common control over an arrangement in accordance with the relevant agreement, and the relevant activities of the arrangement can only be made with the unanimous consent of the participants who share the control. Where the Company exercises joint control over the invested entity and enjoys rights over the net assets of the invested entity together with other joint ventures, the invested entity shall be a joint venture of the Company. Major impact refers to the right to participate in the financial and business decisions of an enterprise, but not to

control or work with other parties to control the formulation of these policies. If the company can exert significant influence on the invested entity, the invested entity shall be an associated enterprise of the company.

2. Determination of initial investment cost.

(1) long-term equity investment formed by enterprise merger.

Business combination under the same control: where a company pays cash, transfers non-cash assets or assumes debts, and issues equity securities as merger consideration, the initial investment cost of the long-term equity investment shall be taken as the initial investment cost of the long-term equity investment in accordance with the share of the book value of the owner's equity of the merged party in the consolidated financial statements of the ultimate controlling party on the merger date. If it is possible to control the invested unit under the same control due to additional investment and other reasons, it shall enjoy the share of the book value of the merged party's net assets in the consolidated financial statements of the final controlling party on the merger date, determine the initial investment cost of long-term equity investment. The difference between the initial investment cost of the long-term equity investment on the merger date and the sum of the book value of the long-term equity investment before the merger plus the book value of the newly paid consideration for further acquired shares on the merger date, if the equity premium is adjusted and the equity premium is insufficient to be offset, offset the retained earnings.

Business merger under different control: the company takes the merger cost determined on the purchase date as the initial investment cost of the long-term equity investment. If it is possible to control the invested units that are not under the same control due to additional investment and other reasons, the sum of the book value of the original equity investment plus the new investment cost shall be taken as the initial investment cost calculated according to the cost method.

(2) long-term equity investment obtained by other means.

The long-term equity investment obtained by means of cash payment shall be taken as the initial investment cost according to the purchase price actually paid.

The long-term equity investment obtained by issuing equity securities shall be taken as the initial investment cost according to the fair value of the equity securities issued.

When the exchange of non-monetary assets has a commercial essence, and the fair value of the exchanged assets or 276/450

exchanged assets can be measured reliably, it shall be measured on the basis of fair value. If the fair value of both the exchanged assets and the exchanged assets can be measured reliably, for the exchanged long-term equity investment, the fair value of the exchanged assets and the relevant taxes payable shall be taken as the initial investment cost of the converted long-term equity investment, unless there is conclusive evidence that the fair value of the converted assets is more reliable. Where the exchange of non-monetary assets does not have a commercial substance, or the fair value of both the exchanged assets and the exchanged assets cannot be measured reliably, for the exchanged long-term equity investment, the book value of the exchanged assets and the relevant taxes payable shall be taken as the initial investment, the book value of the exchanged assets and the relevant taxes payable shall be taken as the initial investment cost of the long-term equity investment.

The long-term equity investment obtained through debt restructuring shall be recorded at other costs such as the fair value of the abandoned creditor's rights and taxes directly attributable to the asset, and the difference between the fair value and the book value of the abandoned creditor's rights shall be included in the profits and losses of the current period.

3. Follow-up measurement and profit and loss recognition method.

(1) long-term equity investment calculated by cost method.

The company's long-term equity investment in subsidiaries shall be accounted for by the cost method. Except for the declared but not yet paid cash dividends or profits included in the price or consideration actually paid at the time of the investment, the company recognizes the current investment income in accordance with the cash dividends or profits declared by the invested entity.

(2) long-term equity investment accounted for by equity method.

The equity method shall be used to calculate the long-term equity investment of joint ventures and joint ventures. When the initial investment cost is greater than the investment, it shall enjoy the difference in the fair value share of the identifiable net assets of the invested unit, and shall not adjust the initial investment cost of the long-term equity investment; when the initial investment cost is less than the investment, it shall enjoy the difference in the fair value share of the identifiable net assets of the invested unit, which shall be included in the profits and losses of the current period.

The company recognizes the investment income and other comprehensive income respectively according to the

share of the net profit and loss and other comprehensive income realized by the invested unit, and adjusts the book value of the long-term equity investment shall be reduced accordingly according to the profits or cash dividends declared and distributed by the invested unit. For other changes in the owner's equity of the invested unit except net profit and loss, other comprehensive income and profit distribution, the book value of the long-term equity investment shall be adjusted and included in the owner's equity.

When recognizing the share of the net profit and loss of the invested unit, it shall be based on the fair value of the identifiable net assets of the invested unit at the time of the investment, and in accordance with the company's accounting policy and accounting period, the net profit of the invested unit is recognized after adjustment. During the period of holding investment, where the invested entity prepares the consolidated financial statements, it shall be accounted for on the basis of the changes in net profit, other comprehensive income and other owners' equity in the consolidated financial statements attributable to the invested unit.

The unrealized internal transaction gains and losses between the company, the joint venture and the joint venture shall be calculated and offset in accordance with the proportion to which the company is entitled, and the investment income shall be recognized on this basis. If the unrealized internal transaction loss with the invested entity belongs to the asset impairment loss, it shall be recognized in full. Where a transaction occurs between a company, an associated enterprise or a joint venture in which assets constitute business, accounting treatment shall be conducted in accordance with the relevant policies disclosed in this note "5. (5) Accounting methods for business mergers under the same control and under different controls" and "5. (6) methods for the preparation of consolidated financial statements".

When the company confirms that it should share the losses incurred by the invested unit, it shall be dealt with in the following order: first, write down the book value of the long-term equity investment. Secondly, if the book value of the long-term equity investment is not enough to offset, the book value of the long-term equity of the net investment of the invested unit shall continue to be recognized to the limit of the book value of the net investment of the invested unit, and the book value of the long-term receivables shall be offset. Finally, after the above treatment, if the enterprise still bears additional obligations in accordance with the investment contract or agreement, the estimated liabilities shall be recognized according to the expected obligations, which shall be included in the investment losses of the current period.

(3) disposal of long-term equity investment.

The difference between the book value of the long-term equity investment and the actual price obtained shall be included in the profits and losses of the current period.

When dealing with the long-term equity investment calculated by the equity method, the investment shall be treated on the same basis as the relevant assets or liabilities directly disposed of by the invested unit, and the part originally included in other comprehensive income shall be treated according to the corresponding proportion. The owner's equity recognized as a result of changes in owners' equity other than net profit and loss, other comprehensive income and profit distribution of the invested unit shall be carried forward pro rata to the profits and losses of the current period, with the exception of other comprehensive income arising from the re-measurement of the net liabilities or changes in net assets of the benefit plan of the invested party.

If the common control or significant influence on the invested unit is lost due to the disposal of part of the equity investment, the remaining equity after disposal shall be accounted for in accordance with the criteria for the recognition and measurement of financial instruments, the difference between the fair value and the book value on the date of loss of common control or significant influence shall be recorded in the profits and losses of the current period. Other comprehensive income recognized by the original equity investment due to the use of the equity method shall be treated on the same basis as the relevant assets or liabilities directly disposed of by the invested unit when the application of the equity method is terminated. The owner's equity recognized as a result of changes in owners' equity other than net profit and loss, other comprehensive income and profit distribution of the invested party shall be transferred to the profits and losses of the current period when the accounting method of equity is terminated.

If the company loses its control over the invested unit due to the disposal of part of the equity investment or the decrease of the proportion of shares held by the company due to the increase of capital of the subsidiary by other investors, when preparing individual financial statements, if the remaining equity can exercise joint control or significant influence on the invested unit, it shall be accounted for according to the equity method, and the remaining equity shall be adjusted by the equity method as soon as it is acquired. Where the remaining equity cannot exercise joint control or exert significant influence on the invested unit, the accounting treatment shall be carried out in accordance with the relevant provisions of the standards for the recognition and measurement of financial

instruments, and the difference between the fair value and the book value on the date of loss of control shall be recorded into the profits and losses of the current period.

The disposed equity is acquired through enterprise merger due to additional investment and other reasons, and when preparing individual financial statements, the remaining equity after disposal is calculated by cost method or equity method, the other comprehensive income and other owners' equity recognized by the equity method before the date of purchase are carried forward in proportion to the other comprehensive income and other owners' rights and interests recognized by the equity method. If the remaining equity after disposal is changed to accounting in accordance with the standards for recognition and measurement of financial instruments, all other comprehensive income and other owners' equity are carried forward.

14. Investment real estate.

Measurement model of investment real estate.

Cost method measurement.

Depreciation or amortization method.

Investment real estate refers to real estate held to earn rent or capital appreciation, or both, including leased land use rights, land use rights held and ready to be transferred after appreciation, leased buildings (including buildings for rental after the completion of self-construction or development activities and buildings that are being rented in the process of construction or development).

The company adopts the cost model to measure the existing investment real estate. The investment real estate-rental buildings measured according to the cost model shall adopt the same depreciation policy as the company's fixed assets, and the leased land use rights shall be carried out in accordance with the same amortization policy as the intangible assets.

15. Fixed assets.

(1) Confirmation conditions.

Fixed assets refer to tangible assets that are held for the production of goods, the provision of labor services, leasing or management, and have a useful life of more than one fiscal year. Fixed assets are recognized when the following conditions are met at the same time: (1) the economic benefits related to the fixed assets are likely to flow into the enterprise; (2) the cost of the fixed assets can be measured reliably.

(2) Depreciation method

| Category. | Depreciation method. | Depreciation life. | Residual value rate. | Annual depreciation rate. |
|-----------------------|-----------------------|--------------------|----------------------|---------------------------|
| Houses and buildings. | Life averaging method | 20-40 | 5.00% | 2.375%-4.75% |
| machinery equipment. | Life averaging method | 5-18 | 5.00% | 5.28%-19.00% |
| Transport equipment. | Life averaging method | 5-10 | 5.00% | 9.5%-19.00% |

| Electronic equipment. | Life averaging method | 3-10 | 5.00% | 9.5%-31.67% |
|-----------------------|-----------------------|------|-------|-------------|
| Office equipment. | Life averaging method | 3-10 | 5.00% | 9.5%-31.67% |
| Other equipment. | Life averaging method | 5-10 | 5.00% | 9.5%-19.00% |

The depreciation of fixed assets shall be classified and calculated by the life-span average method, and the depreciation rate shall be determined according to the category of fixed assets, the expected service life and the expected net salvage rate. If the service life of each component of the fixed asset is different or provides economic benefits for the enterprise in different ways, choose different depreciation rates or depreciation methods to calculate depreciation respectively.

If the fixed assets leased by financial leasing can be reasonably determined that the ownership of the leased assets will be acquired at the expiration of the lease term, depreciation shall be calculated within the useful life of the leased assets; if it is impossible to reasonably determine that the ownership of the leased assets can be obtained at the expiration of the lease term, depreciation shall be calculated within the shorter period of the lease term and the useful life of the leased assets.

(3) The identification basis, valuation and depreciation methods of financial leasing fixed assets.

If one of the following conditions is stipulated in the terms of the lease agreement between the company and the lessee, it is recognized as a financial leased asset: (1) the ownership of the leased asset belongs to the company after the expiration of the lease term; (2) the company has the option to purchase the asset, the purchase price is much lower than the fair value of the asset when the option is exercised; (3) the lease term accounts for most of the useful life of the leased asset; (4) there is no significant difference between the present value of the minimum lease payment on the lease start date and the fair value of the asset. At the beginning of the lease, the company takes the lower of the fair value of the leased asset and the present value of the minimum lease payment as the accounting value of the leased asset, and the minimum lease payment as the accounting value of the leased as an unrecognized financing fee.

16. Projects under construction.

According to the necessary expenditure incurred before the construction of the asset reaches its intended usable state,

the project under construction shall be regarded as the accounting value of the fixed asset. If the built fixed assets have reached the intended usable state in the project, but the final accounts of the construction have not yet been handled, from the date of reaching the scheduled usable state, according to the project budget, cost or actual cost of the project, the fixed assets shall be transferred to the fixed assets according to the estimated value, and the depreciation of the fixed assets shall be calculated in accordance with the company's fixed assets depreciation policy, and the original provisional estimated value shall be adjusted according to the actual cost after handling the final accounts for completion. However, the original depreciation amount shall not be adjusted.

17. Borrowing costs.

1. Confirmation principle of capitalization of borrowing costs.

Borrowing costs, including interest on loans, amortization of discounts or premiums, ancillary expenses and exchange differences arising from foreign currency loans.

If the borrowing costs incurred by a company can be directly attributed to the purchase, construction or production of assets that meet the conditions for capitalization, they shall be capitalized and included in the cost of the relevant assets; other borrowing costs shall be recognized as expenses according to the amount incurred at the time of occurrence, it shall be recorded in the profits and losses of the current period.

Assets that meet the capitalization conditions refer to fixed assets, investment real estate, inventory and other assets that take quite a long time of purchase, construction or production activities to reach the intended state of use or sale.

Capitalization begins when borrowing costs meet the following conditions at the same time:

(1) Asset expenditure has been incurred, which includes expenditure in the form of cash payment, transfer of non-cash assets or undertaking interest-bearing debt for the purchase, construction or production of assets that meet the capitalization conditions;

(2) The cost of borrowing has been incurred;

(3) The purchase, construction or production activities necessary to make the assets available for use or sale have begun.

2. Period of capitalization of borrowing costs.

The capitalization period refers to the period from the beginning of capitalization of borrowing costs to the time of cessation of capitalization, excluding the period of suspension of capitalization of borrowing costs.

When the assets of acquisition, construction or production that meet the conditions for capitalization reach the intended state of use or sale, the borrowing costs shall cease to be capitalized.

When part of the assets of acquisition, construction or production that meet the capitalization conditions are respectively completed and can be used separately, the borrowing costs of that part of the assets shall cease to be capitalized.

If each part of the asset of purchase, construction or production is completed separately, but can be used or sold only after the overall completion, the capitalization of borrowing costs shall be stopped when the asset is completed as a whole.

3. Suspension of capitalization period.

If there is an abnormal interruption of assets that meet the capitalization conditions in the process of purchase, construction or production, and the interruption time exceeds 3 months, the borrowing costs shall be suspended; if the interruption is a procedure necessary for the acquisition, construction or production of assets eligible for capitalization to reach the intended usable state or marketable state, the borrowing costs shall continue to be capitalized. Borrowing costs incurred during the interruption period are recognized as profits and losses of the current period and continue to be capitalized after the resumption of the purchase and construction of assets or production activities.

4. The calculation method of the capitalization rate and capitalization amount of borrowing costs.

For special loans borrowed for the acquisition, construction or production of assets that meet the capitalization conditions, the borrowing costs actually incurred in the current period shall be used to determine the capitalization amount of the borrowing costs by deducting the interest income earned by the unused loan funds deposited in the bank or the investment income from temporary investments.

For general loans occupied for the acquisition, construction or production of assets that meet the capitalization

conditions, the amount of borrowing costs that should be capitalized shall be calculated and determined according to the weighted average of the accumulated asset expenditure exceeding the portion of the special loans multiplied by the capitalization rate of the general loans occupied. The capitalization rate is calculated based on the weighted average interest rate of general borrowing.

18. Intangible assets.

(1) valuation method, service life and impairment test.

1. Valuation method of intangible assets.

(1) The company carries on the initial measurement according to the cost when it acquires the intangible assets;

The cost of purchasing an intangible asset, including the purchase price, related taxes and fees, and other expenses directly attributable to the intended use of the asset. If the price of the purchase of intangible assets exceeds the normal credit conditions and the payment is deferred and has the nature of financing in essence, the cost of the intangible assets shall be determined on the basis of the present value of the purchase price.

The debt restructuring shall obtain the intangible assets used by the debtor to repay the debts, and determine its entry value on the basis of the fair value of the abandoned claims and other costs such as taxes directly attributable to the intended use of the assets, and the difference between the fair value and the book value of the abandoned claims shall be recorded into the profits and losses of the current period.

When the exchange of non-monetary assets has a commercial essence, and the fair value of the exchanged assets or exchanged assets can be measured reliably, it shall be measured on the basis of fair value. If the fair value of both the exchanged assets and the exchanged assets can be measured reliably, for the exchanged intangible assets, the fair value of the exchanged assets and the relevant taxes payable shall be taken as the initial investment cost of the exchanged intangible assets, unless there is conclusive evidence that the fair value of the converted assets is more reliable. Where the exchange of non-monetary assets does not have a commercial substance, or the fair value of both the exchanged assets and the exchanged assets cannot be reliably measured, for the exchanged intangible assets, the book value of the exchanged assets and the relevant taxes payable shall be taken as the initial investment cost of intangible assets.

(2) Follow-up measurement.

Analyze and judge the service life of intangible assets when acquiring them.

Intangible assets with limited service life shall be amortized according to the straight-line method within the period of bringing economic benefits to the enterprise; if it is impossible to foresee the period for which intangible assets bring economic benefits to the enterprise, they shall be regarded as intangible assets with uncertain service life and shall not be amortized.

2. Estimation of the useful life of intangible assets with limited useful life:

| Item | Expected service life. | Amortization method. | According to |
|-------------------------|------------------------|---|------------------------|
| Land use right. | | Land use right for the term of use of the land certificate. | Land ownership. |
| Land ownership. | Permanent. | Overseas land certificate. | Land ownership. |
| Trademarks and patents. | 5-10 years | Service life. | Trademarks and patents |

At the end of each year, the useful life and amortization methods of intangible assets with limited service life are reviewed.

After review, the useful life and amortization method of intangible assets at the end of this year are not different from previous estimates.

3. The basis for judging intangible assets with uncertain service life and the procedure for reviewing their service life.

The land ownership of the subsidiary Fosber Group in Italy has a permanent term, and the company believes that the land ownership will be used in the foreseeable future and will bring expected economic benefits to the company, so it is determined that its useful life is uncertain.

The trademarks registered by subsidiaries Fosber Group and Fosber United States have a service life as required by law, but Fosber Group and Fosber United States may apply for extension at a lower fee at the expiration of the term 286 / 450
of protection. In addition, the relevant survey shows that the market demand for the products attached to the above trademark rights is long-term, and the company will benefit from the above-mentioned trademark products for a long time.

Therefore, the company recognizes the right to use the trademark as an intangible asset with uncertain service life. At the end of each year, the service life of intangible assets with uncertain service life is reviewed.

After review, the service life of the above intangible assets is still uncertain.

(2) Accounting policy for internal R & D expenditure.

1. Specific criteria for dividing the research phase and the development phase.

The expenditure of research and development projects within the company is divided into research phase expenditure and development phase expenditure.

Research stage: the stage of original planned investigation and research activities carried out in order to acquire and understand new scientific or technical knowledge.

Development phase: the stage in which research or other knowledge is applied to a plan or design to produce new or substantially improved materials, devices, products, etc., prior to commercial production or use.

2. Specific conditions for the capitalization of expenditure in the development stage.

The expenditure in the development phase of an internal research and development project is recognized as intangible assets when the following conditions are met:

(1) it is technically feasible to complete the intangible asset so that it can be used or sold;

(2) have the intention to complete the intangible asset and use or sell it;

(3) the ways in which intangible assets generate economic benefits, including the ability to prove that the products produced by the intangible assets exist in the market or the intangible assets themselves exist in the market, and that the intangible assets will be used internally can prove their usefulness;

(4) there are sufficient technical, financial and other resources to support the development of the intangible asset and 287/450

the ability to use or sell the intangible asset;

(5) the expenditure attributed to the development stage of the intangible assets can be measured reliably.

If the expenditure in the development stage does not meet the above conditions, it shall be recorded into the profits and losses of the current period when it occurs. The expenditure of the research stage shall be recorded into the profits and losses of the current period when it occurs.

19. Impairment of long-term assets.

Long-term assets such as long-term equity investment, investment real estate measured by cost model, fixed assets, projects under construction and intangible assets with limited service life shall be tested if there are signs of impairment on the balance sheet date. If the impairment test results show that the recoverable amount of the asset is lower than its book value, the impairment provision shall be calculated according to the difference and the impairment loss shall be included. The recoverable amount is the higher between the net amount of the fair value of the asset minus the disposal expenses and the present value of the expected future cash flow of the asset. The provision for impairment of assets shall be calculated and confirmed on the basis of individual assets. If it is difficult to estimate the recoverable amount of individual assets, the recoverable amount of the asset group shall be determined on the basis of the asset group to which the asset belongs. An asset group is the smallest portfolio that can independently generate cash inflows.

Goodwill, intangible assets with uncertain useful life, and intangible assets that have not yet reached the serviceable state shall be tested for impairment at least at the end of each year.

The company conducts a goodwill impairment test, and the book value of goodwill resulting from a business merger shall be apportioned to the relevant asset group in a reasonable manner from the date of purchase; if it is difficult to be apportioned to the relevant asset group, it shall be apportioned to the relevant asset group portfolio. When apportion the book value of goodwill, the company allocates according to the relative benefits that the relevant asset groups or asset groups can get from the synergy of business merger, and carries on the goodwill impairment test on this basis.

When conducting an impairment test on a relevant asset group or combination of asset groups containing goodwill, if there are signs of impairment in the asset group or combination of asset groups related to goodwill, first carry out

288 / 450

an impairment test on the asset group or combination of assets that do not include goodwill, calculate the recoverable amount, and compare it with the relevant book value to confirm the corresponding impairment loss. Then carry on the impairment test to the asset group or asset group combination including goodwill, and compare the book value of these relevant asset groups or asset groups (including the book value portion of the apportioned goodwill) with their recoverable amount. If the recoverable amount of the relevant asset group or asset group combination is lower than its book value, the impairment loss of goodwill shall be confirmed. Once the impairment loss of the above-mentioned assets is recognized, it shall not be reversed in the subsequent accounting period.

20. Long-term prepaid expenses.

Long-term prepaid expenses are expenses that have been incurred but should be borne by the current and subsequent periods for a period of more than one year.

1. Amortization method.

Long-term prepaid expenses are amortized evenly during the beneficial period.

2. Amortization life.

(1) the expenditure for the improvement of fixed assets shall be amortized over the remaining useful life of the fixed asset;

(2) other expenses shall be amortized averagely from 3 to 5 years according to the number of years of benefit.

21. Salary of staff and workers.

(1) The accounting treatment of short-term compensation.

During the accounting period in which employees provide services to the Company, the Company recognizes the actual short-term compensation as liabilities and includes it in the profits and losses or related asset costs of the current period.

The social insurance premium and housing accumulation fund paid by the company for the staff and workers, as

289 / 450

well as the trade union funds and staff education funds drawn in accordance with the provisions, during the accounting period during which the staff and workers provide services for the company, the corresponding amount of salary of the staff and workers shall be calculated and determined according to the prescribed basis and proportion.

If the welfare expenses of staff and workers are non-monetary welfare, if they can be measured reliably, they shall be measured at fair value.

(2) Accounting treatment of after-service benefits.

(1) set up a withdrawal plan.

The company shall pay basic old-age insurance and unemployment insurance for its employees in accordance with the relevant provisions of the local government. During the accounting period in which the staff and workers provide services for the company, the amount payable shall be calculated according to the local payment base and proportion, which shall be recognized as liabilities, and shall be included in the profits and losses of the current period or the cost of related assets.

In addition to the basic old-age insurance, the company has also established an enterprise annuity contribution system (supplementary old-age insurance) / enterprise annuity plan according to the relevant policies of the national enterprise annuity system. The company shall pay a certain proportion of the total wages of the employees to the local social insurance institutions / annuity plan, and the corresponding expenditure shall be included in the profits and losses of the current period or the cost of related assets.

(2) setting up a benefit plan.

According to the formula determined by the expected cumulative benefit unit method, the Company ascribes the welfare obligations arising from the established benefit plan to the period during which the employee provides services, which is included in the current profit or loss or related asset costs.

The deficit or surplus resulting from the present value of the set benefit plan obligations minus the fair value of the set benefit plan assets is recognized as a net liability or net asset of a set benefit plan. If there is a surplus in the benefit plan, the company shall measure the net assets of the benefit plan by which of the two items: the surplus of the benefit plan and the asset ceiling.

All obligations to set benefit plans, including those expected to be paid within 12 months after the end of the annual reporting period for the provision of services by employees, are discounted according to the market yield of treasury bonds or high-quality corporate bonds in an active market that match the balance sheet date with the duration and currency of the set benefit plan obligations.

The service costs arising from the establishment of the benefit plan and the net interest of the net liabilities or net assets of the benefit plan shall be included in the current profit or loss or the cost of related assets; The changes resulting from the re-measurement of the net liabilities or net assets of the benefit plan are included in other comprehensive income and do not return to profit or loss in subsequent accounting periods, all the parts originally included in other comprehensive income are carried forward to undistributed profits within the scope of equity at the termination of the original benefit plan.

When setting up the settlement of the benefit plan, the settlement gain or loss shall be confirmed according to the difference between the present value of the obligation of the set benefit plan and the settlement price determined on the balance sheet date.

(3) Accounting treatment of dismissal benefits.

When the Company cannot unilaterally withdraw the dismissal benefits provided by the termination plan or the proposed reduction, or recognize the costs or expenses associated with the restructuring involving the payment of the severance benefits, whichever is earlier, the employee emoluments liabilities arising from the termination benefits are recognized and included in the profits and losses of the current period.

(4) Accounting methods for other long-term employee welfare

22. Estimated liabilities.

1. Recognition criteria for estimated liabilities.

When the obligations related to litigation, debt guarantee, loss contract, restructuring and other contingent matters meet the following conditions at the same time, the company is recognized as an estimated liability:

291 / 450

(1) the obligation is a current obligation of the Company;

(2) the performance of this obligation is likely to lead to the outflow of economic benefits from the company;

(3) the amount of the obligation can be measured reliably.

2. The method of measuring all kinds of estimated liabilities.

The Company expects that the liabilities are initially measured on the basis of the best estimate of the expenditure required to meet the relevant current obligations.

In determining the best estimates, the Company takes into account such factors as risks, uncertainties and the time value of money associated with contingencies. If the time value of money has a significant impact, the best estimate is determined by discounting the relevant future cash outflows.

The best estimates are dealt with in the following cases:

If there is a continuous range (or interval) of the required expenditure, and the possibility of various results within that range is the same, the best estimate is determined according to the middle value of the range, that is, the average of the upper and lower limits.

Where there is no continuous range (or interval) of expenditure requirements, or although there is a continuous range, the possibility of various outcomes within that range is different, if a contingent event involves a single project, the best estimate is determined on the basis of the amount most likely to occur; if a contingent event involves multiple projects, the best estimate is determined on the basis of various possible outcomes and related probabilities.

If all or part of the expenses required for the Company's settlement of the estimated liabilities are expected to be compensated by a third party, the amount of compensation shall be recognized separately as assets when it is basically determined that it can be received, and the amount of compensation recognized shall not exceed the book value of the estimated liabilities.

23. Share payment.

The company's share-based payment is a transaction in which equity instruments are granted or liabilities determined on the basis of equity instruments in order to obtain services provided by employees or other parties. The company's share-based payments are equity-settled share-based payments.

Where the share-based payment settled by equity is exchanged for services provided by the staff and workers, the fair value of the equity instruments granted to the staff and workers shall be measured. If the company pays for shares in restricted shares, the staff and workers shall contribute to subscribe for the shares, and the shares shall not be listed, circulated or transferred until the unlocking conditions are met and unlocked; if the unlocking conditions stipulated in the final equity incentive plan are not met, then the company buys back the shares at the agreed price in advance. When the Company obtains the payment made by the employee to subscribe for restricted shares, it recognizes the share capital and capital reserve (equity premium) in accordance with the subscription obtained, and at the same time recognizes a liability in full with respect to the repurchase obligation and recognizes the inventory stock. On each balance sheet day during the waiting period, the Company makes the best estimate of the number of exercisable equity instruments on the basis of the latest follow-up information such as [changes in the number of workable employees] and [whether or not the prescribed performance conditions are met]. According to the fair value on the date of the grant, the services obtained in the current period shall be included in the relevant costs or expenses, and the capital reserve shall be increased accordingly. No adjustments will be made to the recognized relevant costs or expenses and the total amount of owners' equity after the date of exercise. However, if the right can be exercised immediately after the grant, the relevant costs or expenses shall be included in accordance with the fair value on the date of the grant, and the capital reserve shall be increased accordingly.

For the share payment that fails to exercise the right in the end, the cost or fee is not recognized, unless the exercise condition is a market condition or a non-exercisable condition, regardless of whether or not the market condition or non-exercisable condition is met, as long as the non-market conditions in all the conditions of the exercisable right are met, it is regarded as the exercisable right.

If the terms of equity-settled share payments are modified, at least the services obtained are confirmed in accordance with the unmodified terms. In addition, any change that increases the fair value of the equity instrument granted, or any change that is beneficial to the employee on the modification date, recognizes the increase in access to services.

If the equity-settled share payment is cancelled, it will be treated as an accelerated exercise on the cancellation date, and the amount that has not yet been recognized shall be recognized immediately. If the employee or other party may choose to meet the conditions of the non-exercisable right but not during the waiting period, it shall be treated as canceling the share payment settled on the basis of equity. However, if a new equity instrument is granted and it is determined on the date of the grant that the new equity instrument is used to replace the cancelled equity instrument, the granted alternative equity instrument is dealt with in the same manner as the modification of the terms and conditions of the original equity instrument.

24. Income.

Whether the new income criteria have been implemented.

\Box Yes \sqrt{No}

1. General principles for the recognition of income from the sale of goods.

(1) the company has transferred the main risks and rewards in the ownership of the goods to the buyer;

(2) the company does not retain the right of continued management, which is usually associated with ownership, nor does it exercise effective control over the goods that have been sold;

(3) the amount of income can be measured reliably;

(4) the relevant economic benefits are likely to flow into the company;

(5) the related, incurred or to be incurred costs can be measured reliably.

2. Specific principles.

(1) Corrugated printing press related business.

Domestic sales mode: domestic sales take the date of receipt of goods as the time point of revenue recognition, and domestic accessories sales take the goods out of warehouse as the time point of revenue recognition.

Export mode: the revenue of the whole export machine and accessories is confirmed by the customs declaration of the goods and obtaining the customs declaration approved by the customs, the shipment of the goods and the bill of lading of the goods.

(2) Domestic power engine business.

Domestic sales mode: the monthly closing customer takes the invoice after the sales reconciliation as the recognition time point of the income, and the other customers take the invoice after the exit of the warehouse as the recognition time point of the income.

Export mode: the time point of revenue recognition is to declare the goods and obtain the customs declaration approved by the customs, the goods are shipped and the bill of lading is obtained.

(3) Corrugated board production line related business.

Corrugated board production line business income is divided into machine sales revenue and installation service income.

Machine sales: 1) domestic sales model: machines arrive at customers and sign for receipt as the time point of revenue confirmation;

2) Export mode: the revenue recognition time is based on the declaration of the goods and obtaining the customs declaration approved by the customs, the shipment of the goods and the bill of lading.

Installation service revenue: confirm the revenue after the completion of the installation and trial operation of the machine.

(4) Domestic new energy battery business.

Revenue from sales: after the customer checks the product quantity, product name, test report and other factors, the company applies to the customer for settlement and recognizes the income when obtaining the right of collection.

Income from providing labor services: after the implementation of the R & D service provided by the company, the company applies to the customer for settlement after the R & D results are checked and accepted by the customer, and the income is recognized when the collection right is obtained.

25. Government subsidy.

1. Types.

Government subsidy is the monetary and non-monetary assets obtained by the company from the government free

295 / 450

of charge. It is divided into assets-related government subsidies and income-related government subsidies.

The government subsidy related to assets refers to the government subsidy obtained by the company for the purchase, construction or other formation of long-term assets. Government subsidies related to income refer to government subsidies other than those related to assets.

The company divides government subsidies into specific standards related to assets as follows: the use of the money is clearly defined in the government documents, and the direction in which the money is expected to be used is expected to form the relevant assets.

The company divides the government subsidy into specific criteria related to revenue as follows: the use is not specified in the government documents, and the money is expected to be used in the direction of supplementary liquidity.

If the subsidy object is not clearly specified in the government documents, the company classifies the government subsidy as asset-related or income-related judgment on the basis of: except that the company designates its use as asset-related, it will be included in the profits and losses of the current period.

2. Confirm time point.

When the relevant government subsidy is received, it shall be recognized as the government subsidy.

3. Accounting treatment.

Government subsidies related to assets shall write down the book value of the related assets or be recognized as deferred income. If it is recognized as deferred income, it shall be recorded into the profits and losses of the current period according to a reasonable and systematic method during the useful life of the relevant assets (other income if it is related to the daily activities of the company; non-operating income if it has nothing to do with the daily activities of the company);

Government subsidies related to revenue, which are used to compensate the Company for related costs or losses in subsequent periods, shall be recognized as deferred income, and during the period during which the relevant costs or 296/450

losses are recognized, it shall be included in the profits and losses of the current period (those related to the daily activities of the Company) or write-off related costs or losses; If it is used to compensate for the related costs or losses incurred by the Company, it shall be directly included in the profits and losses of the current period (those related to the daily activities of the Company, it shall be included in other income; those not related to the daily activities of the Company shall be included in other income; those not related to the daily activities of the Company shall be included in other income; those not related to the daily activities of the Company shall be included in other income; those not related to the daily activities of the Company shall be included in other income; those not related to the daily activities of the Company shall be included in other income; those not related costs or losses.

26. Deferred income tax assets / deferred income tax liabilities.

The deferred income tax assets recognized as deductible temporary differences shall be limited to the amount of taxable income that is likely to be obtained in the future period to offset the deductible temporary differences. For deductible losses and tax credits that can be carried forward in subsequent years, the corresponding deferred income tax assets are recognized to the extent that future taxable income is likely to be used to offset deductible losses and tax credits.

For taxable temporary differences, except in special circumstances, deferred income tax liabilities shall be recognized.

Special cases in which deferred income tax assets or deferred income tax liabilities are not recognized include: initial recognition of goodwill; other transactions or events that occur other than a business merger that affect neither accounting profits nor taxable income (or deductible losses).

When there is a legal right to settle in net, and it is intended to settle assets in net or to acquire assets and liquidate liabilities at the same time, the current income tax assets and current income tax liabilities shall be reported with the net amount after offsetting.

When you have the legal right to settle current income tax assets and current income tax liabilities with net amount, and deferred income tax assets and deferred income tax liabilities are related to the income tax levied by the same tax collection and administration department on the same taxpayer or on different taxpayers, but during the period of reversal of each important deferred income tax asset and liability in the future, When the taxpayers involved intend to settle the current income tax assets and liabilities with net amount or acquire assets and pay off liabilities at the same time, the deferred income tax assets and deferred income tax liabilities shall be reported as the net amount after

offsetting.

27. Lease

(1) Accounting treatment method of operating lease

(1) The lease fee paid by the company for renting assets shall be apportioned on the straight-line method over the entire lease period without deducting the rent-free period and included in the current expenses. The initial direct costs paid by the company related to the lease transaction are included in the current expenses.

When the asset lessor bears the expenses related to the lease that should be borne by the company, the company deducts part of the expenses from the total rent, and allocates the deducted rental expenses within the lease period to be included in the current expenses.

(2) The lease fee charged by the company for the lease of assets shall be apportioned on the straight-line method over the entire lease period without deducting the rent-free period, and shall be recognized as lease-related income. The initial direct costs related to the lease transaction paid by the company are included in the current expenses; if the amount is larger, they are capitalized and included in the current income in installments on the same basis as the lease-related revenue recognition throughout the entire lease period.

When the company has undertaken the lease-related expenses that should be borne by the lessee, the company deducts this part of the total rental income from the rent, and allocates the deducted rental expenses within the lease period.

(2) The accounting treatment of financial leasing.

(1) Financing leased-in assets: at the beginning of the lease, the company takes the lower of the fair value of the leased assets and the present value of the minimum lease payment as the accounting value of the leased asset, and the minimum lease payment as the accounting value of long-term payables, the difference is regarded as an unrecognized financing expense. The company uses the effective interest rate method to amortize the unrecognized financing expenses during the lease period of the asset, which shall be included in the financial expenses. The initial direct expenses incurred by the company shall be included in the value of the leased assets.

(2) Financing leased-out assets: at the beginning of the lease, the company recognizes the difference between the sum of the unsecured residual value of the financial lease receivable and its present value as unrealized financing income and as lease income in each period in which the rent is received in the future. The initial direct expenses incurred by the company related to the rental transaction shall be included in the initial measurement of the financial lease receivable and reduce the amount of income recognized during the lease term.

28. Other important accounting policies and accounting estimates.

1. Termination of operation.

Termination of operation is a separable component that meets one of the following conditions, and has been disposed of by the Company or classified as holding for sale by the Company:

(1) the component represents a separate major business or a separate major area of business;

(2) this component is part of an associated plan to dispose of a separate major business or a separate major business area;

(3) the component is a subsidiary acquired exclusively for resale.

2. Segment report.

The company determines the operating segment on the basis of the internal organizational structure, management requirements and internal reporting system, determines the reporting segment and discloses the segment information on the basis of the operating segment.

Operating segment refers to the components of the company that meet the following conditions at the same time:

(1) this component can generate income and expenses in daily activities;

(2) the management of the company can regularly evaluate the operating results of this component in order to decide to allocate resources to it and evaluate its performance;

(3) the company can obtain relevant accounting information such as financial position, operating results and cash flow of this component. If two or more operating divisions have similar economic characteristics and meet certain

299 / 450

conditions, they can be merged into one operating segment.

29. Changes in important accounting policies and accounting estimates.

(1) Important accounting policy changes.

 $\sqrt{\text{Applicable}}$ \square not applicable

| The contents and causes of the change of Accounting Policy | Approval procedure | Notes |

(1) implement the Circular of the Ministry of Finance on revising and issuing the format of General Enterprise Financial statements for 2019 and the Circular on revising and issuing the format of Consolidated Financial statements (2019 Edition).

On April 30, 2019 and September 19, 2019, the Ministry of Finance issued the notice on revising and issuing the format of General Enterprise Financial statements in 2019 (Finance (2019) No. 6) and on the revision of the format of Consolidated Financial statements (2019 Edition). Notice (Finance and Accounting (2019) No. 16), the format of general enterprise financial statements has been revised.

(2) implementation of "Accounting Standards for Enterprises No. 22-recognition and Measurement of Financial Instruments", "Accounting Standards for Enterprises No. 23-transfer of Financial assets", "Accounting Standards for Enterprises No. 24-hedging Accounting" and "Accounting Standards for Enterprises No. 37-presentation of Financial Instruments" (revised in 2017).

In 2017, the Ministry of Finance revised "Accounting Standards for Enterprises No. 22-recognition and Measurement of Financial Instruments", "Accounting Standards for Enterprises No. 23-transfer of Financial assets", "Accounting Standards for Enterprises No. 24-hedging Accounting" and "Accounting Standards for Enterprises No. 37-presentation of Financial Instruments". The revised guidelines stipulate that for financial instruments that have not been terminated for recognition on the first implementation date, if the previous recognition and measurement are inconsistent with the requirements of the revised standards, they shall be adjusted retroactively. If the data of the previous comparative financial statements are inconsistent with the requirements of the retained earnings and other consolidated income at the beginning of

the year due to the cumulative impact of retroactive adjustments.

(3) implementation of Accounting Standards for Enterprises No. 7-Exchange of non-Monetary assets (revised in 2019).

The Ministry of Finance issued Accounting Standards for Enterprises No. 7-Exchange of non-monetary assets (revised in 2019) (Accounting (2019) No. 8) on May 9, 2019. The revised standards will come into effect on June 10, 2019. The exchange of non-monetary assets that occurred between January 1, 2019 and the date of implementation of this standard shall be adjusted in accordance with this standard. Non-monetary asset exchanges that took place before January 1, 2019 do not need to be adjusted retroactively in accordance with the provisions of these Standards. The implementation of the above standards by the Company had no significant impact during the reporting period.

(4) implementation of Accounting Standards for Enterprises No. 12-debt restructuring (revised in 2019).

The Ministry of Finance issued the Accounting Standards for Enterprises No. 12-debt restructuring (revised in 2019) (Finance and Accounting (2019) No. 9) on May 16, 2019. The revised standards will come into effect on June 17, 2019. The debt restructuring that occurs between January 1, 2019 and the date of implementation of this standard shall be adjusted in accordance with this standard. Debt restructuring that occurred before January 1, 2019 does not need to be adjusted retroactively in accordance with the provisions of these Standards. The implementation of the above standards by the Company had no significant impact during the reporting period.

(2) Changes in important accounting estimates

 \Box Applicable $\sqrt{\text{not applicable}}$

(3) Since 2019, the implementation of new financial instruments standards, new income standards or new lease standards will be adjusted to implement the projects related to the financial statements at the beginning of the year.

Information about the asset group or asset group portfolio where goodwill is located.

Explain the goodwill impairment testing process, the key parameters (such as the forecast period growth rate, stable period growth rate, profit margin, discount rate, forecast period, etc.) and the confirmation method of goodwill impairment loss when predicting the present value of future cash flow.

(1) Goodwill Testing Process of Fosber Group

| Item | Goodwill testing process of Fosber Group |
|-------------------------|---|
| The formation of | In March 2014 (hereinafter referred to as the "acquisition date"), the Company acquired a 60 per cent stake in |
| goodwill | Fosber Group at a consideration of RMB 355.7081 million, and the fair value of the identifiable net assets of |
| | the company on the merger date was equivalent to RMB 181.9708 million, and the difference in the merger |
| | cost greater than the share of identifiable net assets acquired in the merger was equivalent to RMB 173.7373 |
| | million, which was recognized as goodwill in the consolidated balance sheet. |
| Identification of asset | The acquisition of Japanese Fosber Group's "corrugated board production line business" as the only asset |
| group | group. At the end of this year, the asset group in which goodwill is located is the same as the asset group |
| | determined when goodwill was formed on the date of acquisition, and its composition has not changed. |
| Recoverable amount of | It is determined according to the present value of the expected future cash flow of the asset group. Based on the |
| asset group | five-year financial budget of the above asset group approved by management, the future cash flow is estimated, |
| | and the annual growth rate of operating income in the next five years varies from 4% to 5%. The sustainable |
| | cash flow after five years is determined according to the level of the last year of the detailed forecast period and |
| | combined with factors such as the development trend of the industry. The discount rate for calculating the |
| | present value is 12%, which is the pre-tax discount rate that reflects the specific risk of the relevant asset group. |
| Goodwill impairment | Taking December 31, 2019 as the benchmark date of goodwill impairment test, on the premise that the above |
| test results | assumptions are established, the recoverable amount of the Fosber Group asset group related to goodwill held |
| | by the Company is equivalent to RMB 1.0027372 billion, the book value of the Fosber Group asset group held |
| | by the Company is equivalent to RMB 298.3588 million yuan, and the book value of all goodwill is equivalent |
| | to RMB 267.4282 million. Since the recoverable amount of the asset group related to goodwill is greater than |
| · | |

| the sum of the book value of the asset group of Fosber and the book value of all goodwill, there is no need to |
|--|
| make provision for impairment of goodwill in the current period. |

(2) Parsun Power Goodwill Test process

| Item | Parsun Power Goodwill Test process |
|-------------------------|---|
| The formation of | In July 2015 (hereinafter referred to as the "acquisition date"), the Company acquired an 80 per cent stake in |
| goodwill | Parsun Power at a consideration of RMB 376.1044 million, and the fair value of the identifiable net assets of |
| | the company obtained on the merger date was RMB 168.0725 million yuan. The difference between the |
| | merger cost and the share of identifiable net assets obtained in the merger is RMB 208.0319 million yuan, |
| | which is recognized as goodwill in the consolidated balance sheet. |
| Identification of asset | The acquisition of the "power engine business" owned by Parsun Power is the only asset group. At the end of |
| group | this year, the asset group in which goodwill is located is the same as the asset group determined when goodwill |
| | was formed on the date of acquisition, and its composition has not changed. |
| Recoverable amount of | It is determined according to the present value of the expected future cash flow of the asset group. Based on the |
| asset group | five-year financial budget of the above asset group approved by management, the future cash flow is |
| | estimated, and the annual growth rate of operating income in the next five years ranges from-3.77% to 14.17%. |
| | The sustainable cash flow after five years is determined according to the level of the last year of the detailed |
| | forecast period and combined with factors such as the development trend of the industry. The discount rate for |
| | calculating the present value is 14.81%, which is the pre-tax discount rate that reflects the specific risks of the |
| | relevant asset groups. |
| Goodwill impairment | Taking December 31, 2019 as the benchmark date of goodwill impairment test, under the premise of the above |
| test results | assumptions, the recoverable amount of Parsun Power asset group related to goodwill held by the Company is |
| | RMB 286.0105 million yuan. The book value of Parsun Power Asset Group held by the Company is RMB |
| | 102.817 million yuan, and the book value of all goodwill is RMB 182.7211 million yuan. Provision for |
| | impairment of goodwill is required of RMB 472400. The provision for impairment of goodwill has been set |
| | aside for RMB 61.8551 million in the previous period, so there is no need to replenish the provision for |

| impairment of goodwill in the current period. |
|---|
| |

(3) Italian EDF goodwill testing process

| Item | Italian EDF goodwill testing process |
|-------------------------|---|
| The formation of | In July 2016 (hereinafter referred to as the "acquisition date"), the Company acquired the equity interest in |
| goodwill | Italian EDF100% of Italy at a consideration of RMB 69.6938 million, the fair value of the identifiable net |
| | assets of the company obtained on the merger date was equivalent to RMB 4.9471 million, and the difference |
| | in the merger cost greater than the share of identifiable net assets acquired in the merger was equivalent to |
| | RMB 64.7466 million, which was recognized as goodwill in the consolidated balance sheet. |
| Identification of asset | The "corrugated printing press business" owned by Italian EDF on the date of acquisition is the only asset |
| group | group. At the end of this year, the asset group in which goodwill is located is the same as the asset group |
| | determined when goodwill was formed on the date of acquisition, and its composition has not changed. |
| Recoverable amount of | It is determined according to the present value of the expected future cash flow of the asset group. Based on the |
| asset group | five-year financial budget of the above asset group approved by management, the future cash flow is |
| | estimated, and the annual growth rate of operating income in the next five years is-2.43% and 6.50%. The |
| | sustainable cash flow after five years is determined according to the level of the last year of the detailed |
| | forecast period and combined with factors such as the development trend of the industry. The discount rate for |
| | calculating the present value is 12.01%, which is the pre-tax discount rate that reflects the specific risks of the |
| | relevant asset groups. |
| Goodwill impairment | Taking December 31, 2019 as the benchmark date for goodwill impairment test, on the premise of the above |
| test results | assumptions, the recoverable amount of the Italian EDF asset group held by the Company related to goodwill |
| | is equivalent to RMB 36.9865 million, the book value of the Italian EDF asset group held by the Company is |
| | equivalent to RMB 37.232 million, and the book value of all goodwill is equivalent to RMB 68.6139 million. |
| | Since the recoverable amount of the asset group related to goodwill is less than the sum of the book value of |
| | the Italian EDF asset group and the book value of all goodwill, it is necessary to make provision for goodwill |
| | impairment of RMB 6885.93. As the goodwill impairment amount is larger than the original goodwill value, |

| | the goodwill impairment amount for the current period is RMB 68.6139 million. |
|--|---|

| | | | | | | | |

Other changes are mainly due to the transfer of deferred income of 28316499.76 yuan from the disposal of Beijing Pryder in the current period.

34. Share capital.

Guangdong Dongfang Precision Science & Technology Co., Ltd. 2019 Annual Report

| | | | This change | e increases or dec | reases (+, -) | | |
|--------------|--------------------|---------------------|--------------|--|---------------|----------|----------------|
| | Opening balance | Issue new shares | Send shares. | Conversion of provident fund into stock. | Other | Subtotal | Final balance |
| Total number | 1,838,647,096. | | | | | | 1,838,647,096. |
| of shares | 00 | | | | | | 00 |

Other instructions:

35. Capital reserve.

Unit: yuan

| Item | Opening balance | Increase this period | Decrease this period | Ending balance |
|-------------------------------------|------------------|----------------------|----------------------|------------------|
| Capital premium (equity premium) | 5,297,788,424.33 | 11,375,443.61 | 1,447,073,583.57 | 3,862,090,284.37 |
| Other capital reserve | 287,554.47 | | | 287,554.47 |
| Total | 5,298,075,978.80 | 11,375,443.61 | 1,447,073,583.57 | 3,862,377,838.84 |

Other explanations, including the changes in the current period and the reasons for the changes:

The increase this year is as follows:

(1) There is an unfair situation in the related party transaction between Beijing Pride and the non-controlling shareholder, which shall be dealt with in accordance with the principle of equity transaction, and the difference between the fair value of the consideration and the actual transaction price shall be increased by increasing the capital reserve-equity premium, the amount is 11,375,443.61yuan.

The reduction this year is as follows:

(2) The handling fee paid by the company to buy back shares in 2019, reducing the capital reserve-equity premium of 19298.30 yuan.

(3) Dongfang Precision takes 1 yuan to buy back a fixed number of its own equity instruments as the

consideration for performance compensation, while recognizing transactional financial assets and investment income, and classifies the transactional financial assets as equity instruments, write off the capital reserve-equity premium of 1,447,054,285.27 yuan.

36. Inventory stock.

Unit: yuan

| Item | Opening balance | Increase this period | Decrease this period | Ending balance |
|------------------|-----------------|----------------------|----------------------|----------------|
| Share repurchase | 63,597,455.75 | 96,491,469.85 | | 160,088,925.60 |
| Total | 63,597,455.75 | 96,491,469.85 | | 160,088,925.60 |

Other explanations, including the changes in the current period and the reasons for the changes:

The increase in treasury shares is due to the repurchase of shares by the company in the current period.

37. Other comprehensive income.

| | | | C | urrent occurrenc | ce amount | | | |

| Increase in operating payables (reduced with "-" sign). | 356,387,828.69 | 1,120,782,989.35 |
| Other. | -2,682,257.25 | 83,485.85 |
| Net cash flow from operating activities. | 281,297,787.01 | 721,724,801.12 |
| Major investments and fund-raising activities that do not involve cash receipts and payments: | | |
| 3. Net changes in cash and cash equivalents: | | |

| The closing balance of cash. | 2,226,724,737.39 | 2,057,997,442.35 |
|---|------------------|------------------|
| Less: the opening balance of cash. | 2,057,997,442.35 | 899,031,341.44 |
| Net increase in cash and cash equivalents | 168,727,295.04 | 1,158,966,100.91 |

(2) The net cash paid by the acquired subsidiary in the current period.

Unit: yuan

| | Amount |
|--|----------------|
| Cash or cash equivalents paid in the current period when a business merger occurs in the current period. | 123,995,066.16 |
| Of which: | |
| Of which: : Tiruna Grounp | 123,995,066.16 |
| Minus: cash and cash equivalents held by the company on the date of purchase. | 26,748,538.29 |
| Of which: | |
| Of which: Tiruna Grounp | 26,748,538.29 |
| Of which: | |
| Obtain the net cash paid by the subsidiary | 97,246,527.87 |

Other instructions:

The difference between the net cash paid by subsidiaries in the current period and the consolidated cash flow statement item "net cash paid by subsidiaries and other business units" is mainly due to the difference in exchange rate conversion.

(3) The net cash received for the disposal of subsidiaries in the current period.

| | Amount |
|--|------------------|
| Current disposal of cash or cash equivalents received by subsidiaries in the current period. | 1,500,000,000.00 |
| Of which: | |
| Beijing Pride | 1,500,000,000.00 |
| Minus: cash and cash equivalents held by the company on the date of loss of control. | 58,525,196.49 |
| Of which: | |
| Beijing Pride | 58,525,196.49 |
| Of which: | |
| Disposal of net cash received by subsidiaries | 1,441,474,803.51 |

(4) Composition of cash and cash equivalents.

| Item | Ending balance | Opening balance |
|--|------------------|------------------|
| 1. Cash. | 2,226,724,737.39 | 2,057,997,442.35 |
| Among them: cash in stock. | 249,951.68 | 136,697.03 |
| A bank deposit that can be used for payment at any time. | | 2,057,860,745.32 |
| Other monetary funds that can be used for payment at any time. | 1,625,650.51 | |
| 3. Balance of cash and cash equivalents at the end of the period | | 2,057,997,442.35 |

58. Assets with restricted ownership or use rights.

Unit: yuan

| Item | Final book value | Limited reasons |
|---------------|------------------|-----------------|
| Monetary fund | 129,978,697.21 | Margin |
| Fixed assets | 11,981,751.80 | Loan mortgage |
| Total | 141,960,449.01 | |

59. Foreign currency monetary items.

(1) Foreign currency monetary items.

| Item | Foreign currency balance at the end of the period | Converted exchange rate | Conversion of RMB balance at the end of the period |

| | | | | | change | | | | |

Is there a situation in which the investment in the subsidiary is disposed of step by step through multiple transactions and the control is lost in the current period?

□ Yes √ No

3. Changes in the scope of merger for other reasons.

Explain the changes in the scope of the merger caused by other reasons (for example, newly established subsidiaries, liquidation subsidiaries, etc.) and their related information:

1. In March 2019, Parsun of the United States completed its cancellation.

2. In September 2019, Guangzhou Pride completed its cancellation.

3. In October 2019, Guangdong Frando completed the cancellation.

IX. Rights and interests in other subjects.

1. Interests in subsidiaries.

(1) The composition of enterprise groups

| Subsidiary name. | Main operating | Place of | Nature of | Sharehold | Mode of | |

x. Risks related to financial instruments

The company faces various financial risks during its operation: credit risk, market risk and liquidity risk. The company's board of directors is fully responsible for the determination of risk management objectives and policies, and assumes ultimate responsibility for the risk management objectives and policies. However, the board of directors has authorized the company's presidential office to design and implement procedures that ensure the effective implementation of risk management objectives and policies. The board of directors reviews the effectiveness of the implemented procedures and the rationality of risk management objectives and policies through the monthly report submitted by the fund manager. The company's internal auditors also audit risk management policies and procedures, and report relevant findings to the audit committee.

The overall goal of the company's risk management is to formulate a risk management policy that minimizes risks without excessively affecting the company's competitiveness and resilience.

1. Credit risk

Credit risk refers to the risk that one party to a financial instrument fails to perform its obligations and causes the other party to incur financial losses. The company mainly faces customer credit risk caused by credit sales. Before signing a new contract, the company will assess the credit risk of new customers, including external credit ratings

and bank credit certificates in certain cases (when this information is available). The company has set a credit limit for each customer, which is the maximum amount that does not require additional approval.

The company uses quarterly monitoring of existing customers' credit ratings and monthly review of aging analysis of accounts receivable to ensure that the company's overall credit risk is within controllable limits. When monitoring customers 'credit risk, they are grouped according to customers' credit characteristics. Customers who are rated as "high risk" will be placed on the list of restricted customers, and only with additional approval will the company be able to sell them on credit in the future period, otherwise they must be required to pay in advance.

2. Market risk

Market risk of financial instruments refers to the risk that the fair value or future cash flow of financial instruments will fluctuate due to changes in market prices, including exchange rate risk, interest rate risk, and other price risks.

(1) Interest rate risk

Interest rate risk refers to the risk that the fair value of financial instruments or future cash flows will fluctuate due to changes in market interest rates. The interest rate risk faced by the company mainly comes from bank loans.

As of December 31, 2019, while other variables remained unchanged, if the borrowing rate calculated at floating rates rose or fell by 50 basis points, the company's net profit would decrease or increase by RMB 22,906.37. Management believes that the 50 basis points reasonably reflect the reasonable range in which interest rates may change in the next year.

(2) Exchange rate risk

Exchange rate risk refers to the risk that the fair value of financial instruments or future cash flows will fluctuate due to changes in foreign exchange rates. As far as possible, the company matches foreign currency income with foreign currency expenditure to reduce exchange rate risk. In addition, the company may also sign forward foreign exchange contracts or currency swap contracts to avoid exchange rate risk. During the current period and the previous period, the Company did not sign any forward foreign exchange contracts or currency swap contracts.

The exchange rate risk faced by the company mainly comes from financial assets and financial liabilities denominated in US dollars. The amounts of foreign currency financial assets and foreign currency financial

liabilities converted into RMB are listed below:

| Item | Ending balance | | | | Balance at the end of last year | | | |
|-------------------------------|----------------|----------------|--------------------------------|----------------|---------------------------------|----------------|--------------------------------|----------------|
| | US dollars | Euro | Other foreign currencies | Total | US dollars | Euro | Other foreign currencies | Total |

| Interest | - | 2,626,376.27 | | 2,626,376.27 | | 1,587,011.19 | | 1,587,011.19 |
| payable. | | | | | | | | |
| Subtotal | 651,243.06 | 463,358,368.18 | 14,075.42 | 464,023,686.66 | 1,705,231.77 | 497,377,534.86 | 9,077.82 | 499,091,844.45 |
| Total | 271,682,810.09 | 237,582,731.84 | 184,462.19 | 509,450,004.12 | 275,533,373.35 | 170,416,220.75 | -7,268.20 | 445,942,325.90 |

On December 31, 2019, while all other variables remain unchanged, if the RMB appreciates or depreciates by 2% against the US dollar, the company will increase or decrease its net profit by 3,595,794.73 yuan (31 December 2018: 4,442,363.44 yuan). Management believes that 2% reasonably reflects the reasonable range of possible changes in RMB against the US dollar in the next year.

3. Liquidity risk

Liquidity risk refers to the risk of a shortage of funds when an enterprise fulfills its obligation to settle cash or other financial assets. The company's policy is to ensure that it has sufficient cash to repay its due debts. Liquidity risk is centrally controlled by the company's financial department. The finance department monitors cash balances, securities that can be cashed at any time, and rolling forecasts of cash flows over the next 12 months to ensure that the company has sufficient funds to repay debts under all reasonable forecasts.

The undiscounted contract cash flows of the financial liabilities of the Company are shown as follows:

| Item | Ending balance | | | | |
|-------------------|-----------------|---------------|--------------|-------------|----------------|

2. In January 2018, Dongfang Precision and Bank of China (Hong Kong) Co., Ltd. signed a letter of guarantee / standby letter of credit contract to provide a total guarantee of not more than 44.88 million euros for overseas subsidiary Dongfang Precision (Holland) to obtain loans from Bank of China (Hong Kong) Co., Ltd., with a guarantee period from February 20, 2018 to June 20, 2021.

XV.Events after the balance sheet date.

1. Other statements of events after the balance sheet date.

1. Repurchase and cancellation of performance compensation shares.

According to the agreement signed between the company and Pride's original shareholders, the company buys back the performance compensation shares that should be borne by Pride's original shareholders at a price of RMB 1, and the total number of repurchase and cancellation of performance compensation shares is 293520139 shares. The company received the confirmation of Securities transfer Registration issued by Shenzhen Branch of China Securities Registration and Clearing Co., Ltd. on January 7, 2020, and received a notice from Shenzhen Branch of China Securities Registration and Clearing Co., Ltd. on January 8, 2020, the relevant work related to the repurchase and cancellation of the performance compensation shares has been completed.

After the completion of the repurchase and cancellation of the performance compensation shares, the total share capital of the company has changed from 1838647096 shares to 1545126957 shares.

2. On authorizing the management to apply for comprehensive credit from the bank in 2020.

On January 10, 2020, the company held the 42nd (interim) meeting of the third session of the board of directors to examine and approve the "Resolution on authorizing the Management to apply for Comprehensive Credit from the Bank in 2020". The total amount of comprehensive credit applied to the bank for the year 2020 shall not exceed 3 billion yuan, which is valid for 2 years. Within the term of validity, the quota can be recycled and rolled over, and the board of directors authorizes the management of the company to be responsible for specific implementation-related matters.

3. Use idle self-owned funds to purchase bank wealth management products.

On January 10, 2020, the company held the 42nd (interim) meeting of the third session of the board of directors and

examined and adopted the "proposal on using idle self-owned funds to purchase financial products in 2020." it is agreed that in 2020, the company will use idle self-funds to purchase financial products with a low-and medium-risk risk level and a holding period of no more than 12 months. The amount that occurred during the year (that is, the maximum daily balance of purchasing wealth management products with idle self-funds from January to December 2020) shall not exceed 2 billion yuan, and the financial management quota purchased during the year can be used on a rolling basis, the board of directors authorizes the management of the company to be responsible for specific implementation-related matters.

4. Provide guarantee for overseas wholly-owned subsidiaries.

On January 10, 2020, the company held the 42nd (interim) meeting of the third session of the board of directors to examine and approve the "Bill on providing guarantee for overseas wholly-owned subsidiaries" and agreed to re-sign the relevant guarantee agreement with the Bank of China Foshan Branch to apply for a credit line of no more than 600 million yuan from the Bank of China Foshan Branch with its own real estate and land mortgage guarantee. And continue to provide guarantee for the Dutch subsidiary of Dongfang Precision with a total amount not exceeding 44.88 million euros.

5. The investment project on raising funds is terminated and the savings raised are permanently replenished to the working capital.

On March 11, 2020, the company held the 43th (interim) meeting of the third session of the board of directors to examine and approve the motion on terminating the fund-raising investment project and permanently replenishing the working capital with the savings raised. It is agreed that the investment project of the company's raised funds will be terminated and 1.10779 billion yuan of surplus raised funds will be used to permanently replenish current funds, and this bill needs to be submitted to the general meeting of the company for consideration and approval.

6. On the company's implementation of a restricted stock incentive plan in 2020.

On March 11, 2020, the company held the forty-third (interim) meeting of the third session of the board of directors to deliberate and pass the motion on the draft and summary of the company's 2020 restricted stock incentive plan, 432/450

the bill on the implementation of the 2020 restricted stock incentive plan, and the motion on requesting the general meeting of shareholders to authorize the board of directors to handle matters related to the company's 2020 restricted stock incentive plan. The number of restricted shares to be granted under this incentive plan is 27 million shares, of which 22.85 million shares are granted for the first time, 4.15 million shares are reserved, and the grant price is 1 yuan per share. This motion still needs to be submitted to the general meeting of shareholders of the company for consideration and approval.

XVI. Other important matters

1. Termination of business

unit: yuan

| Item | Income | Cost | Total profit | Income tax expense | Net profit | Profit attributable to the owner of the parent company |
|-------|------------------|------------------|----------------|-----------------------|----------------|---|
| Pride | 7,106,097,351.49 | 6,635,980,332.99 | 421,268,666.68 | 110,455,237.91 | 310,813,428.77 | 310,813,428.77 |

Other instructions.

2. Segment information.

(1) The basis for determining the reporting segment and accounting policy.

The company determines the operating division on the basis of internal organizational structure, management requirements, internal reporting system, etc. The operating division of a company refers to the components that meet the following conditions at the same time:

(1) This component can generate income and expenses in daily activities;

(2) Management can regularly evaluate the operating results of this component in order to decide to allocate resources to it and evaluate its performance;

(3) The relevant accounting information such as financial situation, operating results and cash flow of the component can be obtained

through analysis.

The company determines the reporting segment on the basis of industry segment / product segment, and the assets and liabilities commonly used with each segment are distributed among different segments in proportion to their size.

(2) Report the financial information of the segment.

Unit: yuan

| Item | Domestic company | Foreign company | Inter-segment elimination | Total |
