III. CORPORATE INFORMATION

Chongqing Changan Automobile Company Limited (hereafter referred to as the "Company") is a company limited by shares registered in Chongqing, People's Republic of China. It was establish on 31 October 1996 with an indefinite business period. The ordinary A shares of Renminbi issued by the company and the B shares of domestically listed foreign shares have been listed on the Shenzhen Stock Exchange. Changan Group is headquartered at 260 Jianxin East Road, Jiangbei District, Chongqing, China.

After the establishment of the company, the share capital and shareholding structure have undergone several changes. As of June 30, 2021, the company's controlling shareholder China Changan Automobile Group Company Limited (hereinafter referred to as "China Changan") and its wholly-owned subsidiary Zhonghui Futong (Hong Kong) Investment Company Limited held a total of ordinary shares of the company1,175,623,127 shares with an equity ratio of 21.61%. China South Industries Group Co., Ltd. (hereinafter referred to as "China South Group"), the parent company of China Changan, and its wholly-owned subsidiary, South Industries International Holdings (Hong Kong) Company Limited, hold 1,139,295,521 ordinary shares of the company, with a 20.90% shareholding ratio. China Changan and China South Group holds ordinary shares 2,314,918,648 in total with a shareholding ratio of 42.56%.

The Company and its subsidiaries collectively refer to as the Group, and its main business activities are: the manufacturing and sales of automobiles (including cars), automobile engine products, and supporting parts.

The holding company and ultimate holding company of the Company are China Changan and China South Group respectively.

The scope of consolidation in the consolidated financial statement is determined based on control. For the consolidation scope of this year, please refer to Note VIII.

IV. BASIS OF PREPERATION

The financial statements have been prepared in accordance with Accounting Standards for Business Enterprises-Basic Standard and the specific standards issued and modified subsequently, and the implementation guidance, interpretations and other relevant provisions issued subsequently by the MOF (correctly referred to as "Accounting Standards for Business Enterprises").

The financial statements are presented on a going concern basis.

The financial statements have been prepared under the historical cost convention, except for certain financial instruments. If the assets are impaired, the corresponding provisions should be made accordingly.

V. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

According to the actual production and operation characteristics, the group formulated the specific accounting policies and accounting estimates, mainly reflected in provision of accounts receivables, inventory valuation, depreciation of fixed assets, intangible assets amortization, condition of capitalization of research and development expense and revenue recognition and measurement.

1. Statement of compliance with Accounting Standards for Business Enterprises

The financial statements present fairly and fully, the financial position of the Company as at 31 December 2020 and the financial results and the cash flows for the year then ended in accordance with Accounting Standards for Business Enterprises.

2. Accounting year

The accounting year of the Group is from 1 January to 31 December of each calendar year.

3. Functional currency

The Group's functional and reporting currency is the Renminbi ("RMB"). Unless otherwise stated, the unit of the currency is Yuan. Each entity in the Group determines its own functional currency in accordance with the operating circumstances. At the end of the reporting period, the foreign currency financial statements are translated into the reporting currency of the Company of RMB.

4. Business combination

Business combinations are classified into business combinations involving entities under common control and business combinations involving entities not under common control.

Business combination involving entities under common control

A business combination involving entities under common control is a business combination in which all of the combining entities are ultimately controlled by the same party or parties both before and after the combination, and that control is not transitory. For a business combination involving entities under common control, the party which, on the combination date, obtains control of another entity participating in the combination is the acquiring party, while that other entity participating in the combination is a party being acquired. Combination date is the date on which the acquiring party effectively obtains control of the party being acquired.

Assets and liabilities that are obtained by the acquiring party in a business combination involving entities under common control shall be measured at their carrying amounts at the combination date as recorded by the party being acquired. The difference between the carrying amount of the net assets obtained and the carrying amount of the consideration paid for the combination (or the aggregate face value of shares issued as consideration) shall be adjusted to capital reserve. If the capital reserve is not sufficient to absorb the difference, any excess shall be adjusted against retained earnings.

Business combination involving entities not under common control

A business combination involving entities not under common control is a business combination in which all of the combining entities are not ultimately controlled by the same party or parties both before and after the combination. For a business combination involving entities not under common control, the party that, on the acquisition date, obtains control of another entity participating in the combination is the acquirer, while that other entity participating in the combination is the acquiree. Acquisition date is the date on which the acquirer effectively obtains control of the acquiree.

The acquirer shall measure the acquiree's identifiable assets, liabilities and contingent liabilities acquired in the business combination at their fair values on the acquisition date.

Goodwill is initially recognized and measured at cost, being the excess of the aggregate of the fair value of the consideration transferred (or the fair value of the equity securities issued) and any fair value of the Group's previously held equity interest in the

acquiree over the Group's interest in the fair value of the acquiree's net identifiable assets. After initial recognition, goodwill is measured at cost less any accumulated impairment losses. Where the aggregate of the fair value of the consideration transferred (or the fair value of the equity securities issued) and any fair value of the Group's previously held equity interest in the acquiree is lower than the Group's interest in the fair value of the acquiree's net identifiable assets, the Group reassesses the measurement of the fair value of the acquiree's identifiable assets, liabilities and contingent liabilities and the fair value of the consideration transferred (or the fair value of the equity securities issued), together with the fair value of the Group's previously held equity interest in the acquiree. If after that reassessment, the aggregate of the fair value of the consideration transferred (or the fair value of the equity securities issued) and the Group's previously held equity interest in the acquiree is still lower than the Group's interest in the fair value of the acquiree's net identifiable assets, the Group recognize the remaining difference in profit or loss.

5. Consolidated financial statements

The scope of the consolidated financial statements, which include the financial statements of the Company and all of its subsidiaries, is determined on the basis of control. A subsidiary is an entity that is controlled by the Company (such as an enterprise, a deemed separate entity, or a structured entity controlled by the Company).

In the preparation of the consolidated financial statements, the financial statements of the subsidiaries are prepared for the same reporting period as the Company, using consistent accounting policies. All intra-group assets and liabilities, equity, income, expenses and cash flows relating to transactions between members of the Group are eliminated in full on consolidation.

When the current loss belong to minorities of the subsidiary exceeds the beginning equity of the subsidiary belong to minorities, the exceeded part will still deduct the equity belong to minorities.

With respect to subsidiaries acquired through business combinations involving entities not under common control, the operating results and cash flows of the acquiree should be included in the consolidated financial statements, from the day that the Group gains control, till the Group ceases the control of it. While preparing the consolidated financial statements, the acquirer should adjust the subsidiary's financial statements, on the basis of the fair values of the identifiable assets, liabilities and contingent liabilities recognized on the acquisition date.

With respect to subsidiaries acquired through business combinations involving entities under common control, the operating results and cash flows of the acquiree should be included in the consolidated financial statements from the beginning of the period in which the combination occurs

If the changes of relevant facts and circumstances will result in the changes of one or more control elements, then the Group should reassess whether it has taken control of the investee.

6. Joint venture arrangement classification and joint operation

Joint venture arrangements are classified into joint operation and joint venture. Joint operation refers to those joint venture arrangements, relevant assets and liabilities of which are enjoyed and assumed by the joint ventures. Joint ventures refer to those joint venture arrangements, only the right to net assets of which is enjoyed by the joint ventures.

Any joint venture shall recognize the following items related to its share of benefits in the joint operation and conduct accounting

treatment in accordance with relevant accounting standards for business enterprises: assets it solely holds and its share of jointly-held assets based on its percentage; liabilities it solely assumes and its share of jointly-assumed liabilities based on its percentage; incomes from sale of output enjoyed by it from the joint operation; incomes from sale of output from the joint operation based on its percentage; and separate costs and costs for the joint operation based on its percentage.

7. Cash and cash equivalents

Cash comprises cash on hand and bank deposits which can be used for payment at any time; Cash equivalents are short-term, highly liquid investments held by the Group, that are readily convertible to known amounts of cash and which are subject to an insignificant risk of changes in value.

8. Foreign currency translation

The Group translates the amount of foreign currency transactions occurred into functional currency.

The foreign currency transactions are recorded, on initial recognition in the functional currency, by applying to the foreign currency amount at the spot exchange rate on the transaction dates. Foreign currency monetary items are translated using the spot exchange rate quoted by the People's Bank of China at the balance sheet date. The exchange gains or losses arising from occurrence of transactions and exchange of currencies, except for those relating to foreign currency borrowings specifically for construction and acquisition of fixed assets capitalized, are dealt with in the profit and loss accounts. Non-monetary foreign currency items measured at historical cost remain to be translated at the spot exchange rate prevailing on the transaction date, and the amount denominated in the functional currency should not be changed. Non-monetary foreign currency items measured at fair value should be translated at the spot exchange rate prevailing on the date when the fair values are determined. The exchange difference thus resulted should be charged to the current income or other comprehensive income account of the current period.

When preparing consolidated financial statements, the financial statements of the subsidiaries presented in foreign currencies are translated into Renminbi as follows: asset and liability accounts are translated into Renminbi at exchange rates ruling at the balance sheet date; shareholders' equity accounts other than retained profits are translated into Renminbi at the applicable exchange rates ruling at the transaction dates; income and expense in income statement are translated into Renminbi at spot exchange rates on transaction occurrence; total difference between translated assets and translated liabilities and shareholders' equity is separately listed as "foreign currency exchange differences" below retained profits. The translation difference arising from the settlement of oversea subsidiaries is charged to the current liquidation profit and loss in proportion to the settlement ratio of the assets concerned.

Foreign currency cash flows and the cash flows of foreign subsidiaries should be translated using the average exchange rate prevailing on the transaction month during which the cash flows occur. The amount of the effect on the cash arising from the change in the exchange rate should be separately presented as an adjustment item in the cash flow statement.

9. Financial instruments

A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity.

Recognition and derecognition

The Group recognizes a financial asset or a financial liability, when the Group becomes a party to the contractual provision of the instrument.

A financial asset (or, where applicable, a part of a financial asset or part of a group of similar financial assets) is primarily derecognized (i.e., removed from the Group's consolidated balance sheet) when:

1) the rights to receive cash flows from the financial asset have expired;

2) the Group has transferred its rights to receive cash flows from the financial asset, or has assumed an obligation to pay the received cash flows in full without material delay to a third party under a "pass-through" arrangement; and either (a) has transferred substantially all the risks and rewards of the financial asset, or (b) has neither transferred nor retained substantially all the risks and rewards of the asset, but has transferred control of the financial asset.

A financial liability is derecognized when the obligation under the liability is discharged or cancelled, or expires. When an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as a derecognition of the original liability and a recognition of a new liability, and the difference between the respective carrying amounts is recognized in profit or loss.

Regular way purchases and sales of financial assets are recognized and derecognized using trade date accounting. Regular way purchases or sales are purchases or sales of financial assets that require delivery within the period generally established by regulation or convention in the marketplace. The trade date is the date that the Group committed to purchase or sell a financial asset.

Classification and measurement of financial assets

The classification of financial assets at initial recognition depends on the financial asset's contractual cash flow characteristics and the Group's business model for managing them: financial assets at fair value through profit or loss, financial assets at amortized cost and financial assets at fair value through other comprehensive income. All affected related financial assets will be reclassified only if the Group changes its business model for managing financial assets.

Financial assets are measured at fair value on initial recognition, but accounts receivable or notes receivable arising from the sale of goods or rendering of services that do not contain significant financing components or for which the Group has applied the practical expedient of not adjusting the effect of a significant financing component due within one year, are initially measured at the transaction price.

For financial assets at fair value through profit or loss, relevant transaction costs are directly recognized in profit or loss, and transaction costs relating to other financial assets are included in the initial recognition amounts.

The subsequent measurement of financial assets depends on their classification as follows:

Debt investments measured at amortized cost

The Group measures financial assets at amortized cost if both of the following conditions are met: the financial asset is held within a

business model with the objective to hold financial assets in order to collect contractual cash flows; the contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding. Financial assets at amortized cost are subsequently measured using the effective interest method. Gains and losses are recognized in profit or loss when the asset is derecognized, modified or impaired.

Debt investments at fair value through other comprehensive income

The Group measures debt investments at fair value through other comprehensive income if both of the following conditions are met: the financial asset is held within a business model with the objective of both holding to collect contractual cash flows and selling; the contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding. Interest income is recognized using the effective interest method. The interest income, impairment losses and foreign exchange revaluation are recognized in profit or loss. The remaining fair value changes are recognized in other comprehensive income. Upon derecognition, the cumulative fair value change recognized in other comprehensive income is recycled to profit or loss.

Equity investments at fair value through other comprehensive income

The Group can elect to classify irrevocably its equity investments which are not held for trading as equity investments designated at fair value through other comprehensive income. Only the relevant dividend income (excluding the dividend income explicitly recovered as part of the investment cost) is recognized in profit or loss. Subsequent changes in the fair value are included in other comprehensive income, and no provision for impairment is made. When the financial asset is derecognized, the accumulated gains or losses previously included in other comprehensive income are transferred from other comprehensive income to retained earnings.

Financial assets at fair value through profit or loss

The financial assets other than the above financial assets measured at amortized cost and financial assets at fair value through other comprehensive income are classified as financial assets at fair value through profit or loss. Such financial assets are subsequently measured at fair value with net changes in fair value recognized in profit or loss.

Classification and measurement of financial liabilities

Financial liabilities are classified, at initial recognition, as financial liabilities at fair value through profit or loss, other financial liabilities. For financial liabilities at fair value through profit or loss, relevant transaction costs are directly recognized in profit or loss, and transaction costs relating to other financial assets are included in the initial recognition amounts.

The subsequent measurement of financial liabilities depends on their classification as follows:

Financial liabilities at fair value through profit or loss

Financial liabilities at fair value through profit or loss include financial liabilities held for trading and financial liabilities designated upon initial recognition as at fair value through profit or loss. Financial liabilities held for trading are subsequently measured at fair value with net changes in fair value recognized in profit or loss. Gains or losses on liabilities designated at fair value through profit or loss are recognised in profit or loss, except for the gains or losses arising from the Group's own credit risk which are presented in other comprehensive income with no subsequent reclassification to profit or loss.

Other financial liabilities

Other financial liabilities are subsequently measured at amortized cost using the effective interest method.

Impairment of financial assets

On the basis of expected credit losses, the Group performs impairment treatment on financial assets measured at amortized cost and equity instrument investments measured at fair value and whose changes are included in other comprehensive income, and reserves for loss are recognized.

For receivables and contract assets that do not contain significant financing components, the Group uses a simplified measurement method to measure the loss provision vased on the expected credit loss amount for the entire duration.

For financial assets other than the simplified measurement method mentioned above, the Group assesses on each balance sheet date whether its credit risk has not increased significantly since initial recognition, it is in the first stage. The Group measures the loss provision based on the amount equivalent to the expected credit loss in the next 12 months, and calculates the interest income based on the book balance and the actual interest rate; if the credit risk has increased significantly since initial recognition but has not yet suffered credit impairment, it is in the second at this stage, the Group measures the loss provision based on the amount equivalent to the expected credit loss for the entire duration, and calculates the interest income based on the book balance and the actual interest rate; If credit impairment occurs after initial recognition, it is in the third stage. The amount of expected credit losses is measured over the entire duration of the loss allowance, and interest income is calculated based on amortized cost and effective interest rate. For financial instruments with low credit risk on the balance sheet date, the Group assumes that their credit risk has not increased significantly since initial recognition.

The Group assesses the expected credit losses of financial instruments based on individual items and portfolios. The Group has considered the credit risk characteristics of different customers and evaluated the expected credit losses of accounts receivable and other receivables based on the ageing combination.

Please refer to Note VIII.3 for the disclosure of the Group's judgment criteria for significant increase in credit risk, the definition of credit impairment assets that have occurred, and assumptions about the expected credit loss measurement.

When the Group no longer reasonably expects to be able to fully or partially recover the contractual cash flows of financial assets, the Group directly writes down the book balance of the financial asset.

Offsetting of financial instruments

Financial assets and financial liabilities are offset and the net amount is reported in the balance sheet if there is a currently enforceable legal right to offset the recognized amounts; and there is an intention to settle on a net basis, or to realize the assets and settle the liabilities simultaneously.

Transfer of financial assets

If the Group transfers substantially all the risks and rewards of ownership of the financial asset, the Group derecognizes the financial asset; and if the Group retains substantially all the risks and rewards of the financial asset, the Group does not derecognize the

financial asset.

If the Group neither transfers nor retains substantially all the risks and rewards of ownership of the financial asset, the Group determines whether it has retained control of the financial asset. In this case: (i) if the Group has not retained control, it derecognizes the financial asset and recognize separately as assets or liabilities any rights and obligations created not retained in the transfer; (ii) if the Group has retained control, it continues to recognize the financial asset to the extent of its continuing involvement in the transferred financial asset and recognizes an associated liability.

10. Inventories

Inventory includes raw materials, goods in transit, work in progress, finished goods, consigned processing materials, low-value consumables and spare parts.

Inventory is initially carried at the actual cost. Inventory costs comprise all costs of purchase, costs of conversion and other costs incurred in bringing the inventory to its present location and condition. Weighted average method is assigned to the determination of actual costs of inventories. One-off writing off method is adopted in amortization of low-value consumables.

The Group applies a perpetual counting method of inventory.

At the balance sheet date, the inventory is stated at the lower of cost and net realizable value. If the cost is higher than the net realizable value, provision for the inventory should be made through profit or loss. If factors that resulted in the provision for the inventory have disappeared and made the net realizable value higher than their book value, the amount of the write-down should be reversed, to the extent of the amount of the provision for the inventory, and the reversed amount should be recognized in the income statement for the current period.

Net realizable value is the estimated selling price in the ordinary course of business less the estimated costs of completion and the estimated costs necessary to make the sale. The impairment provision should be made on a basis of each item of inventories according to the difference between cost and net realizable value. For large numbers of inventories at relatively low unit prices, the provision for loss on decline in value of inventories should be made by category.

11. Contract assets and contract liabilities

The group lists contract assets or contract liabilities in the balance sheet according to the relationship between performance obligations and customer payments. The group presents the contract assets and contract liabilities under the same contract in net amount after offsetting each other.

Contract assets

Contract assets refer to the right to receive consideration for goods or services transferred to customers, and the right depends on other factors other than the passage of time.

The group's determination method and accounting treatment method of expected credit loss of contract assets are detailed in note V and 9.

Contractual liabilities

Contractual liabilities refer to the obligation to transfer goods or services to customers for the consideration received or receivable from customers, such as the amount received by the enterprise before transferring the promised goods or services.

12. Long-term equity investments

Long-term equity investments include investments in subsidiaries, joint ventures and associates.

Long-term equity investments are recognized at initial investment cost upon acquisition. For a long-term equity investment acquired through a business combination under common control, the initial investment cost of the long-term equity investment shall be the absorbing party's share of the carrying amount of the owners' equity of the party being absorbed in the consolidated financial statements of the ultimate controlling party at combination date. The difference between the initial investment cost and the carrying amount of cash paid, non-cash assets transferred and liabilities assumed shall be adjusted to capital reserve. If the balance of capital reserve is not sufficient, any excess shall be adjusted to retained earnings. Any other comprehensive income previously recognized shall be accounted for on the same basis as would have been required if the investee had directly disposed of the related assets or liabilities. The portion recognized based on changes in the investee's equity (other than net profit or loss, other comprehensive income and profit appropriation) is charged to profit or loss upon disposal of such long-term equity investment. For those partially disposed equity investments, gains or losses upon disposal are proportionately recognized in profit or loss when they still constitute long-term equity investments after the disposal and are fully charged to profit or loss when they are reclassified to financial instruments after the disposal. For business combination involving entities not under common control, the initial investment cost should be the cost of acquisition (for step acquisitions not under common control, the initial investment cost is the sum of the carrying amount of the equity investment in the acquiree held before the acquisition date and the additional investment cost paid on the acquisition date), which is the sum of the fair value of assets transferred, liabilities incurred or assumed and equity instruments issued. If the equity investments in the acquiree involve other comprehensive income prior to the acquisition date, when disposing of the investments, the relevant other comprehensive income will be accounted for on the same basis as would have been required if the investee had directly disposed of the related assets or liabilities. The portion recognized based on changes in the investee's equity (other than net profit or loss, other comprehensive income and profit appropriation) is charged to profit or loss upon disposal of such long-term equity investment. The initial investment cost of a long-term equity investment acquired otherwise than through a business combination shall be determined as follows: for a long-term equity investment acquired by paying cash, the initial investment cost shall be the actual purchase price has been paid plus those costs, taxes and other necessary expenditures directly attributable to the acquisition of the long-term equity investment; for those acquired by the issue of equity securities, the initial investment cost shall be the fair value of the equity securities issued.

The Company adopted cost method to account for long-term investments in the subsidiaries in the separate financial statements of the Company. Control is the power to govern the financial and operating policies of an entity so as to obtain benefits from its activities.

Under cost method, the long-term equity investment is valued at the cost of the initial investment. The cost of long-term equity investment should be adjusted in case of additional investment or disinvestments. When cash dividends or profits are declared by the invested enterprise is recognized as investment income in current period.

The equity method is applied to account for long-term equity investments, when the Group has jointly control, or significant influence on the investee enterprise. Joint control is the contractually agreed sharing of control over an economic activity, and exists only when the strategic financial and operating decisions relating to the activity require the unanimous consent of the parties sharing control (the ventures). Significant influence is the power to participate in the financial and operating policy decisions of an economic activity but is not control or joint control over those policies.

Under equity method, when the initial investment cost of a long-term equity investment exceeds the investing enterprise's interest in the fair values of the investee's identifiable net assets at the acquisition date, the difference is accounted for as an initial cost. As to the initial investment cost is less than the investing enterprise's interest in the fair values of the investee's identifiable net assets at the acquisition date, the difference shall be charged to the income statement for the current period, and the cost of the long-term equity investment shall be adjusted accordingly.

Under equity method, the Group recognizes its share of post-acquisition equity in the investee enterprise for the current period as a gain or loss on investment, and also increases or decreases the carrying amount of the investment. When recognizing its share in the net profit or loss of the investee entities, the Group should, based on the fair values of the identifiable assets of the investee entity when the investment is acquired, in accordance with the Group's accounting policies and periods, after eliminating the portion of the profits or losses, arising from internal transactions with joint ventures and associates, attributable to the investing entity according to the share ratio (but losses arising from internal transactions that belong to losses on the impairment of assets, should be recognized in full), recognize the net profit of the investee entity after making appropriate adjustments. The book value of the investment is reduced to the extent that the Group's share of the profit or cash dividend declared to be distributed by the investee enterprise. However, the share of net loss is only recognized to the extent that the book value of the investment is reduced to zero, except to the extent that the Group has incurred obligations to assume additional losses. The Group shall adjust the carrying amount of the long-term equity investment for other changes in owners' equity of the investee enterprise (other than net profits or losses), and include the corresponding adjustments in equity, which should be realized through profit or loss in subsequent settlement of the respective long-term investment.

On settlement of a long-term equity investment, the difference between the proceeds actually received and the carrying amount shall be recognized in the income statement for the current period. As to other comprehensive income recognized based on measurement of the original equity investment by employing the equity method, accounting treatment shall be made on the same basis as would be required if the invested entity had directly disposed of the assets or liabilities related thereto when measurement by employing the equity method is terminated. As to any change in owners' equity of the invested entity other than net profit or loss, other comprehensive income and profit distribution, the investing party shall be transferred to the income statement for the current period. If the remaining equities still be measured under the equity method, accumulative change previously recorded in other comprehensive income shall be transferred to current profit or loss, in measurement on the same basis as the invested entity had directly disposed of the assets or liabilities related thereto. The income or loss recorded in the equity directly should been transferred to the current income statement on settlement of the equity investment on the disposal proportion.

13. Investment property

Investment property are properties held to earn rentals or for capital appreciation, or both, including rented land use right, land use right which is held and prepared for transfer after appreciation, and rented building.

The initial measurement of the investment property shall be measured at its actual cost. The follow-up expenses pertinent to an investment property shall be included in the cost of the investment property, if the economic benefits pertinent to this real estate are likely to flow into the enterprise, and, the cost of the investment property can be reliably measured. Otherwise, they should be included in the current profits and losses upon occurrence.

The group adopts the cost method to make follow-up measurement to the investment property. The buildings are depreciated under straight-line method.

14. Fixed assets

A fixed asset probably shall be recognized only when the economic benefits associated with the asset will flow to the Group and the cost of the asset can be measured reliably. Subsequent expenditure incurred for a fixed asset that meet the recognition criteria shall be included in the cost of the fixed asset, and the book value of the component of the fixed asset that is replaced shall be derecognized. Otherwise, such expenditure shall be recognized in the income statement in the period during which they are incurred.

Fixed assets are initially measured at actual cost on acquisition. The cost of a purchased fixed asset comprises the purchase price, relevant taxes and any directly attributable expenditure for bringing the asset to working condition for its intended use, such as delivery and handling costs, installation costs and other surcharges.

Fixed assets are depreciated on straight-line basis. The estimated useful lives estimated residual values and annual depreciation rates for each category of fixed assets are as follows:

Category	Deprecation period	Residual rate (%)	Yearly deprecation rate (%)				
Buildings	20 to 35 years	3%	2.77%-4.85%				
Machinery (Note)	5 to 20 years	3%	4.85%-19.40%				
Vehicles	4 to 10 years	3%	9.70%-24.25%				
Others 3 to 21 years 3% 4.62%-32.33%							
Note: the molds in machinery should be depreciated in units-of-production method.							

The Group reviews the useful life and estimated net residual value of a fixed asset and the depreciation method applied at least at the end of each year and makes adjustments if necessary.

15. Construction in progress

The cost of construction in progress is determined according to the actual expenditure for the construction, including all necessary

construction expenditure incurred during the construction period, borrowing costs that should be capitalized before the construction reaches the condition for intended use and other relevant expenses.

Construction in progress is transferred to fixed assets when the asset is ready for its intended use.

16. Borrowing costs

Borrowing costs are interest and other costs incurred by the Group in connection with the borrowing of the funds. Borrowing costs include interest, amortization of discounts or premiums related to borrowings, ancillary costs incurred in connection with the arrangement of borrowings, and exchange differences arising from foreign currency borrowings.

The borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset are capitalized, otherwise the borrowing costs are expensed in the period during which they are incurred. A qualifying asset is an asset (an item of property, plant and equipment and inventory etc.) that necessarily takes a substantial period of time to get ready for its intended use of sale.

The capitalization of borrowing costs is as part of the cost of a qualifying asset shall commence when:

- 1) expenditure for the asset is being incurred;
- 2) borrowing costs are being incurred; and
- 3) activities that are necessary to prepare the asset for its intended use or sale are in progress.

Capitalization of borrowing costs shall be ceased when substantially all the activities necessary to prepare the qualifying asset for its intended use or sale have been done. And subsequent borrowing costs are recognized in the income statement.

During the capitalization period, the amount of interest to be capitalized for each accounting period shall be determined as follows:

- 1) where funds are borrowed for a specific-purpose, the amount of interest to be capitalized is the actual interest expense incurred on that borrowing for the period less any bank interest earned form depositing the borrowed funds before being used on the asset or any investment income on the temporary investment of those funds;
- 2) where funds are borrowed for a general-purpose, the amount of interest to be capitalized on such borrowings is determined by applying a weighted average interest rate to the weighted average of the excess amounts of cumulative expenditure on the asset over and above the amounts of specific-purpose borrowings.

During the construction or manufacture of assets that are qualified for capitalization, if abnormal discontinuance, other than procedures necessary for their reaching the expected useful conditions, happens, and the duration of the discontinuance is over three months, the capitalization of the borrowing costs is suspended. Borrowing costs incurred during the discontinuance are recognized as expense and charged to the income statement of the current period, till the construction or manufacture of the assets resumes.

17. Right of use assets

Recognition conditions of right to use assets

On the beginning date of the lease term, the Group recognizes the right to use assets for leases other than short-term leases and low

value asset leases.

The right of use assets are initially measured at cost. This cost includes:

- 1) Initial measurement amount of lease liabilities;
- 2) For the lease payment paid on or before the beginning of the lease term, if there is lease incentive, the relevant amount of lease incentive enjoyed shall be deducted;
- 3) Initial direct costs incurred;
- 4) The estimated costs incurred for dismantling and removing the leased assets, restoring the site where the leased assets are located or restoring the leased assets to the state agreed in the lease terms.

Depreciation method of right of use assets

The group adopts the straight-line method for depreciation. If the group, as the lessee, can reasonably determine the ownership of the leased asset at the expiration of the lease term, depreciation shall be accrued within the remaining service life of the leased asset. If it is impossible to reasonably determine that the ownership of the leased asset can be obtained at the expiration of the lease term, depreciation shall be accrued within the shorter of the lease term and the remaining service life of the leased asset.

18. Intangible assets

An intangible asset probably shall be recognized only when the economic benefits associated with the asset will flow to the Group and the cost of the asset can be measured reliably. Intangible assets are initially measured at cost. The cost of intangible assets acquired in a business combination is the fair value as at the date of acquisition, if the fair value can be reliably measured.

The useful life of the intangible assets shall be assessed according to the estimated beneficial period expected to generate economic benefits. An intangible asset shall be regarded as having an indefinite useful life when there is no foreseeable limit to the period over which the asset is expected to generate economic benefits for the Group.

The useful lives of the intangible assets are as follow:

Useful life

Land use right43 to 50 yearsSoftware2 yearsTrademark10 yearsNon-patent technology5 years

Land use rights that are purchased or acquired through the payment of land use fees are accounted for as intangible assets. With respect to self-developed properties, the corresponding land use right and buildings should be recorded as intangible and fixed assets separately. As to the purchased properties, if the reasonable allocation of outlays cannot be made between land and buildings, all assets purchased will be recorded as fixed assets. The cost of a finite useful life intangible asset is amortized using the straight-line method during the estimated useful life. For an intangible asset with a finite useful life, the Group reviews the estimated useful life and amortization method at least at the end of each year and adjusts if necessary.

The Group should test an intangible asset with an indefinite useful life for impairment by comparing its recoverable amount with its carrying amount annually, whenever there is an indication that the intangible asset may be impaired. An intangible asset with an indefinite useful life shall not be amortized.

The useful life of an intangible asset that is not being amortised shall be reviewed each period to determine whether events and circumstances continue to support an indefinite useful life assessment for that asset. If there are indicators that the intangible asset has finite useful life, the accounting treatment would be in accordance with the intangible asset with finite useful life.

19. Research and development expenditures

The Group classified the internal research and development expenditures as follows: research expenditures and development cost.

The expenditures in research stage are charged to the current income on occurrence.

The expenditures in development stage are capitalized that should meet all the conditions of (a) it is technically feasible to finish intangible assets for use or sale; (b) it is intended to finish and use or sell the intangible assets; (c) the usefulness of methods for intangible assets to generate economic benefits shall be proved, including being able to prove that there is a potential market for the products manufactured by applying the intangible assets or there is a potential market for the intangible assets itself or the intangible assets will be used internally; (d) it is able to finish the development of the intangible assets, and able to use or sell the intangible assets, with the support of sufficient technologies, financial resources and other resources; and (e) the development expenditures of the intangible assets can be reliably measured. Expenses incurred that don't meet the above requirements unanimously should be expensed in the income statement of the reporting period.

The Group discriminates between research and development stage with the condition that the project research has been determined, in which the relevant research complete all the fractionalization of products measurements and final product scheme under final approval of management. The expenditures incurred before project-determination stage is charged to the current income, otherwise it is recorded as development cost.

20. Impairment of assets

The Group determines the impairment of assets, other than the impairment of inventory, contract assets and assets related to contract costs, deferred income taxes, and financial assets, using the following methods:

The Group assesses at the balance sheet date whether there is any indication that an asset may be impaired. If any indication exists that an asset may be impaired, the Group estimates the recoverable amount of the asset and performs impairment tests. Goodwill arising from a business combination and an intangible asset with an indefinite useful life are tested for impairment at least at the end of every year, irrespective of whether there is any indication that the asset may be impaired. An intangible asset which is not ready for its intended use is tested for impairment at least at the end of every year.

The recoverable amount of an asset is the higher of its fair value less costs to sell and the present value of the future cash flow expected to be derived from the asset. The Group estimates the recoverable amount on an individual basis. If it is not possible to

estimate the recoverable amount of the individual asset, the Group determines the recoverable amount of the asset group to which the asset belongs. Identification of an asset group is based on whether major cash flows generated by the asset group are independent of the cash flows from other assets or asset groups.

When the recoverable amount of an asset or asset group is less than its carrying amount, the carrying amount is reduced to the recoverable amount. The impairment of asset is provided for and the impairment loss is recognized in the income statement for the current period.

For the purpose of impairment testing, the carrying amount of goodwill acquired in a business combination is allocated, on a reasonable basis, to related asset groups; if it is impossible to allocate to the related asset groups, it is allocated to each of the related sets of asset groups. Each of the related asset groups or related sets of asset groups is a group or set of asset group that is able to benefit from the synergies of the business combination and shall not be larger than a reportable segment determined by the Group.

When an impairment test is conducted on an asset group or a set of asset groups that contains goodwill, if there is any indication of impairment, the Group firstly tests the asset group or the set of asset groups excluding the amount of goodwill allocated for impairment, i.e., it determines and compares the recoverable amount with the related carrying amount and then recognize impairment loss if any. Thereafter, the Group tests the asset group or set of asset groups including goodwill for impairment, the carrying amount (including the portion of the carrying amount of goodwill allocated) of the related asset group or set of asset groups is compared to its recoverable amount. If the carrying amount of the asset group or set of asset groups is higher than its recoverable amount, the amount of the impairment loss is firstly eliminated by and amortized to the book value of the goodwill included in the asset group or set of asset groups, and then eliminated by the book value of other assets according to the proportion of the book values of assets other than the goodwill in the asset group or set of asset groups.

Once the above impairment loss is recognized, it cannot be reversed in subsequent periods.

21. Long-term deferred expenses

The long-term deferred expenses represent the payment for the improvement on buildings and other expenses, which have been paid and should be deferred in the following years. Long-term deferred expenses are amortized on the straight-line basis over the expected beneficial period and are presented at actual expenditure net of accumulated amortization.

22. Employee benefits

Employee benefits refer to all kinds of remunerations or compensation made by enterprises to their employees in exchange for services provided by the employees or termination of labor relation. Employee compensation includes short-term compensation and post-employment benefits. The benefits offered by enterprises to the spouse, children, the dependents of the employee, the family member of deceased employee and other beneficiaries are also employee compensation.

Short-term employee salaries

During the accounting period of employee rendering service, the actual employees salaries and are charged to the statement of profit or loss as they become payable in balance sheet.

Post-employment benefits (Defined contribution plans)

The employees of the Group participate in pension insurance, which is managed by local government and the relevant expenditure, is recognized, when incurred, in the costs of relevant assets or the profit and loss for the current period.

Post-employment benefits (Defined benefit plan)

The Group operates a defined benefit pension plan which requires contributions to be made to a separately administered fund. The benefits are unfunded. The cost of providing benefits under the defined benefit plan is determined using the projected unit credit actuarial valuation method.

Remeasurements arising from defined benefit pension plans are recognised immediately in the consolidated statement of financial position with a corresponding debit or credit to retained profits through other comprehensive income in the period in which they occur. Remeasurements are not reclassified to profit or loss in subsequent periods.

Past service costs are recognised in profit or loss at the earlier of: the date of the plan amendment or curtailment; and the date that the Group recognises restructuring-related costs.

Net interest is calculated by applying the discount rate to the net defined benefit liability or asset. The Group recognises the following changes in the net defined benefit obligation under administrative expenses in the consolidated statement of profit or loss by function: •service costs comprising current service costs, past-service costs, gains and losses on curtailments and non-routine settlements;net interest expense or income.

Termination benefits

Termination benefits are recognized at the earlier of when the Group can no longer withdraw the offer of those benefits and when the Group recognises restructuring costs involving the payment of termination benefits.

23. Provisions

An obligation related to a contingency shall be recognised by the Group as a provision when all of the following conditions are satisfied, except for contingent considerations and contingent liabilities assumed in a business combination not involving entities under common control:

- 1) the obligation is a present obligation of the Group;
- 2) it is probable that an outflow of economic benefits from the Group will be required to settle the obligation;
- 3) a reliable estimate can be made of the amount of the obligation.

Contingent liabilities are initially measured according to the current best estimate for the expenditure necessary for the performance of relevant present obligations, with comprehensive consideration given to factors such as the risks, uncertainty and time value of

money relating to contingencies. The book value of the contingent liabilities should be reviewed at each balance sheet date. If there is objective evidence showing that the book value cannot reflect the present best estimate, the book value should be adjusted according to the best estimate.

The contingent liabilities of the acquiree acquired in the business combination involving entities not under common control are measured at fair value upon initial recognition. After initial recognition, the balance of the amount recognized according to the estimated liabilities and the amount initially recognized after deducting the accumulated amortization determined by the revenue recognition principle is subsequently measured at the higher of the two.

24. Revenue from contracts with customers

The Group has fulfilled its performance obligations in the contracts, that is, the revenue is recognized when the customer obtains control of the relevant goods or services. Obtaining control over related goods or services means being able to lead the use of the goods or the provision of the services and obtain almost all of the economic benefits from it.

Contracts for the sale of goods

A contract for the sale of goods between the Group and the customer usually includes the performance obligation to transfer of goods, transportation services and free maintenance. The Group allocates the transaction price to each individual performance obligation in accordance with the relative proportion of the stand-alone selling price of the goods or services promised by each individual performance obligation on the date of contract commencement. Regarding the performance obligations of the transferred goods, the Group usually recognizes revenue at the point when the performance obligations are fulfilled based on the following indicators, which include: a present right to payment for goods, the transfer of significant risks and rewards of ownership of goods, the transfer of legal title to goods, the transfer of physical possession of goods, the customer's acceptance of goods.

Provide service contract

The performance obligations of the service provision contract between the Group and the customer are due to the fact that the customer obtains and consumes the economic benefits brought by the performance of the group at the same time the group performs the contract, and the group has the right to accumulate the economic benefits during the entire contract period. The Group regards it as a performance obligation performed within a period, and recognizes the revenue according to the performance progress, unless the performance progress cannot be reasonably determined. In accordance with the output method, the Group determines the progress of the performance of the service provided based on the completed or delivered products. When the performance progress cannot be reasonably determined, if the cost incurred by the Group is expected to be compensated, the revenue will be recognized according to the amount of the cost incurred until the performance progress can be reasonably determined.

Variable consideration

Some contracts between the Group and customers have sales rebate arrangements, forming variable consideration. The Group determines the best estimate of the variable consideration based on the expected value or the most likely amount, but the transaction price including the variable consideration does not exceed the amount that the accumulated recognized revenue will most likely not be materially reversed when the relevant uncertainty is eliminated.

Warranty obligations

In accordance with contractual agreements and legal provisions, the Group provides quality assurance for the goods sold. For guarantee quality assurance to ensure that the products sold meet the established standards, the Group conducts accounting treatment in accordance with Note III, 21. For the service quality assurance that provides a separate service in addition to the established standards to ensure that the goods sold meet the established standards, the Group regards it as a single performance obligation, based on the stand-alone selling price of the quality assurance of the goods and services provided. In a relative proportion, part of the transaction price is allocated to service quality assurance, and revenue is recognized when the customer obtains control of the service. When assessing whether the quality assurance provides a separate service in addition to ensuring that the products sold meet the established standards, the Group considers whether the quality assurance is a legal requirement, the quality assurance period, and the nature of the group's commitment to perform tasks.

Principal/agent

For the Group to lead a third party to provide services to customers on behalf of the Group, the Group has the right to independently determine the price of the goods or services traded, that is, the Group can control the relevant goods before transferring the goods to the customers, so the Group is the main responsible person, and recognize revenue based on the total consideration received or receivable. Otherwise, the Group acts as an agent and recognizes revenue based on the amount of commission or fees expected to be charged. This amount should be based on the net amount of the total consideration received or receivable minus the price payable to other related parties, or based on the established commission amount or proportions, etc.

25. Share based payment

Share based payment is divided into equity settled share based payment and cash settled share based payment. Equity settled share based payment refers to the transaction settled by the group with shares or other equity instruments as consideration for obtaining services.

Where equity settled share based payment is exchanged for services provided by employees, it shall be measured at the fair value of equity instruments granted to employees. If the right is exercisable immediately after the grant, it shall be included in the relevant costs or expenses according to the fair value on the date of grant, and the capital reserve shall be increased accordingly; If the right can only be exercised after completing the services in the waiting period or meeting the specified performance conditions, on each balance sheet date in the waiting period, based on the best estimate of the number of exercisable equity instruments, the services obtained in the current period shall be included in the relevant costs or expenses according to the fair value on the grant date, and the capital reserve shall be increased accordingly.

For the share based payment that fails to exercise due to non market conditions and / or service term conditions, no costs or expenses are recognized. If the market conditions or non exercisable conditions are specified in the share based payment agreement, no matter whether the market conditions or non exercisable conditions are met or not, as long as all other performance conditions and / or service term conditions are met, it is deemed to be exercisable.

If the terms of equity settled share based payment are modified, the services obtained shall be recognized at least according to the unmodified terms. In addition, the increase in the fair value of the granted equity instruments or the change beneficial to the employees on the modification date shall be recognized as the increase in the services obtained.

If the equity settled share based payment is cancelled, it shall be treated as accelerated exercise on the cancellation date, and the unrecognized amount shall be recognized immediately. If an employee or other party can choose to meet the non exercisable conditions but fails to meet them within the waiting period, it shall be treated as canceling the equity settled share based payment. However, if a new equity instrument is granted and it is determined that the granted new equity instrument is used to replace the cancelled equity instrument on the grant date of the new equity instrument, the granted alternative equity instrument shall be treated in the same way as the modification of the terms and conditions of the original equity instrument.

26. Government grants

A government grant is recognized only when there is reasonable assurance that the entity will comply with any conditions attached to the grant and the grant will be received. Monetary grants are accounted for at received or receivable amount. Non-monetary grants are accounted for at fair value. If there is no reliable fair value available, the grants are accounted for a nominal amount.

A government grant which is specified by the government documents to be used to purchase and construct the long-term assets shall be recognized as the government grant related to assets. A government grant which is not specified by the government documents shall be judged based on the basic conditions to obtain the government grant. The one whose basic condition was to purchase and construct the long-term assets shall be recognized as the government grant related to assets.

The Group uses the gross method to account for government grants.

Government grants related to income to be used as compensation for future expenses or losses shall be recognized as deferred income and shall be charged to the current profit or loss or be used to write down the relevant loss, during the recognition of the relevant cost expenses or losses; or used as compensation for relevant expenses or losses already incurred by enterprises shall be directly charged to the profit and loss account in the current period or used to write down the relevant cost.

The government grants related to assets shall be used to write down the book value of the relevant assets or be recognized as deferred income. The government grants related to assets, recognized as deferred income, shall be charged to the profit and loss reasonably and systematically in stages over the useful lives of the relevant assets. The government grants measured at nominal amount shall be directly charged to the current profit and loss. The remaining book value of the government grants related to assets should be charged to the profit and loss account in the current period when the relative assets sold, transferred, disposed or damaged.

27. Income taxes

Income tax comprises current and deferred tax. Income tax is recognized as an income or an expense and include in the income statement for the current period, except to the extent that the tax arises from a business combination or if it relates to a transaction or event which is recognized directly in equity.

Current income tax liabilities or assets for the current and prior periods, are measured at the amount expected to be paid (or recovered)

according to the requirements of tax laws.

For temporary differences at the balance sheet date between the tax bases of assets and liabilities and their carrying amounts, and temporary differences between the carrying amounts and the tax bases of items, the tax bases of which can be determined for tax purposes, but which have not been recognized as assets and liabilities, deferred taxes are provided using the liability method.

A deferred tax liability is recognized for all taxable temporary differences, except:

- (1) to the extent that the deferred tax liability arises from the initial recognition of goodwill or the initial recognition of an asset or liability in a transaction which contains both of the following characteristics: the transaction is not a business combination and at the time of the transaction, it affects neither the accounting profit nor taxable profit or loss.
- (2) in respect of taxable temporary differences associated with investments in subsidiaries, associates and interests in jointly-controlled enterprises, where the timing of the reversal of the temporary differences can be controlled and it is probable that the temporary differences will not reverse in the foreseeable future.

A deferred tax asset is recognized for deductible temporary differences, carry forward of unused tax credits and unused tax losses, to the extent that it is probable that taxable profit will be available against which the deductible temporary differences, and the carry forward of unused tax credits and unused tax losses can be utilized except:

- (1) where the deferred tax asset relating to the deductible temporary differences arises from the initial recognition of an asset or liability in a transaction that is not a business combination and, at the time of the transaction, affects neither the accounting profit nor taxable profit or loss; and
- (2) in respect of deductible temporary differences associated with investments in subsidiaries, associates and interests in joint ventures, deferred tax assets are only recognized to the extent that it is probable that the temporary differences will reverse in the foreseeable future and taxable profit will be available against which the temporary differences can be utilized.

At the balance sheet date, deferred tax assets and liabilities are measured at the tax rates that are expected to apply to the period when the asset is realized or the liability is settled, according to the requirements of tax laws. The measurement of deferred tax assets and deferred tax liabilities reflects the tax consequences that would follow from the manner in which the Group expects at the balance sheet date, to recover the assets or settle the liabilities.

At the balance sheet date, the Group reviews the book value of deferred tax assets. If it is probable that sufficient taxable income cannot be generated to use the tax benefits of deferred tax assets, the book value of deferred tax assets should be reduced. When it is probable that sufficient taxable income can be generated, the amount of such reduction should be reversed. When it is probable that sufficient taxable income can be generated, the amount of such reduction should be reversed.

When the following conditions are met at the same time, the deferred tax assets and deferred tax liabilities are listed at the net amount after offset: the legal right to settle the current income tax assets and current income tax liabilities at the net amount; the deferred tax assets and deferred tax liabilities are related to the income tax levied by the same tax collection and management department on the same taxable subject or different taxpaying subjects However, in the future, during each period when the significant deferred tax assets and deferred tax liabilities are reversed, the tax payer involved intends to settle the current income tax assets and current

income tax liabilities with net amount or obtain assets and pay off debts at the same time.

28. Lease liabilities

At the beginning of the lease term, the Group recognizes the present value of the unpaid lease payments as lease liabilities, except for short-term leases and low value asset leases. When calculating the present value of lease payments, the group adopts the interest rate embedded in the lease as the discount rate; If the interest rate embedded in the lease cannot be determined, the lessee's incremental loan interest rate shall be used as the discount rate. The group calculates the interest expense of the lease liability in each period of the lease term according to the fixed periodic interest rate and records it into the current profit and loss, unless otherwise specified, it is included into the cost of relevant assets. The amount of variable lease payments not included in the measurement of lease liabilities shall be included in the current profits and losses when they actually occur, unless otherwise specified to be included in the cost of relevant assets.

After the beginning date of the lease term, when the actual fixed payment amount changes, the expected payable amount of the guaranteed residual value changes, the index or ratio used to determine the lease payment amount changes, the evaluation results or actual exercise of the purchase option, renewal option or termination option change, The group remeasures the lease liabilities according to the present value of the changed lease payments.

29. Lease

Identification of leases

On the contract commencement date, the group evaluates whether the contract is a lease or includes a lease. If one party in the contract transfers the right to control the use of one or more identified assets within a certain period in exchange for consideration, the contract is a lease or includes a lease. In order to determine whether the contract transfers the right to control the use of the identified assets within a certain period, the group evaluates whether the customers in the contract have the right to obtain almost all the economic benefits arising from the use of the identified assets during the use period, and have the right to dominate the use of the identified assets during the use period.

Identification of individual leases

If the contract contains multiple separate leases at the same time, the group will split the contract and conduct accounting treatment for each separate lease. If the following conditions are met at the same time, the right to use the identified assets constitutes a separate lease in the contract:

- (1) The lessee can profit from the use of the asset alone or in combination with other easily available resources;
- (2) The asset is not highly dependent or highly related to other assets in the contract.

Spin off of leased and non leased parts

If the contract includes both lease and non lease parts, the group, as the lessor and lessee, will split the lease and non lease parts for accounting treatment;

Evaluation of lease term

The lease term is the irrevocable period during which the group has the right to use the leased assets. The group has the option to renew the lease, that is, it has the option to renew the asset. If it is reasonably determined that the option will be exercised, the lease term also includes the period covered by the option to renew the lease. The group has the option to terminate the lease, that is, it has the option to terminate the lease of the asset, but it is reasonably determined that it will not exercise the option, and the lease term includes the period covered by the option to terminate the lease. If a major event or change occurs within the control of the group and affects whether the group reasonably determines that it will exercise the corresponding option, the group reassesses whether it reasonably determines that it will exercise the renewal option, the purchase option or not to exercise the termination option.

As lessee

For the general accounting treatment of the group as lessee, see notes V and 17 and notes V and 28.

Lease change

Lease change refers to the change of lease scope, lease consideration and lease term beyond the terms of the original contract, including increasing or terminating the use right of one or more leased assets, extending or shortening the lease term specified in the contract, etc.

If the lease changes and the following conditions are met at the same time, the group will treat the lease change as a separate lease for accounting treatment:

- (1) The lease change expands the lease scope by increasing the use right of one or more leased assets;
- (2) The increased consideration is equivalent to the amount of the separate price for most of the expansion of the lease scope adjusted according to the conditions of the contract.

If the lease change is not accounted for as a separate lease, on the effective date of the lease change, the group redefines the lease term and discounts the changed lease payment at the revised discount rate to re measure the lease liability. When calculating the present value of the lease payment after the change, the group adopts the lease embedded interest rate during the remaining lease period as the discount rate; If the implicit interest rate of the lease for the remaining lease period cannot be determined, the group's incremental loan interest rate on the effective date of the lease change shall be used as the discount rate.

With regard to the impact of the above lease liability adjustment, the group makes accounting treatment according to the following circumstances:

- (1) If the lease scope is reduced or the lease term is shortened due to the lease change, the group reduces the book value of the right of use assets to reflect the partial or complete termination of the lease, and the relevant gains or losses of the partial or complete termination of the lease are included in the current profit and loss;
- (2) For other lease changes, the group adjusts the book value of the right to use assets accordingly.

Short term leases and low value asset leases

The Group recognizes the lease with a lease term of no more than 12 months and excluding the purchase option as a short-term lease on the beginning date of the lease term; Leases with insignificant value when a single leased asset is a new asset are recognized as low value asset leases. Where the group sublets or expects to sublet leased assets, the original lease is not recognized as a low value asset lease. The group does not recognize the right to use assets and lease liabilities for short-term leases and low value asset leases. In each period of the lease term, it shall be included in the relevant asset cost or current profit and loss according to the straight-line method.

As lessor

Leases that have substantially transferred almost all the risks and rewards related to the ownership of the leased assets on the lease commencement date are finance leases, except for operating leases.

As an operating lessor

The rental income from operating leases is recognized as the current profit and loss by the straight-line method in each period of the lease term, and the variable lease payments not included in the lease receipts are included in the current profit and loss when they actually occur.

30. Profit distribution

The cash dividend of the Group is recognized as liabilities after the approval of general meeting of stockholders.

31. Safety fund

The safety fund extracted by the Group shall be recognized as the cost of the related products or income statement, while be recognized as special reserve. When using safety fund, it shall be distinguished whether it will form fixed assets or not. The expenditure shall write down the special reserve; the capital expenditure shall be recognized as fixed assets when meet the expected conditions for use, and write down the special reserve while recognizing accumulated depreciation with the same amount.

32. Fair value measurement

The Group measures its equity investments at fair value at the end of each reporting period. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value measurement is based on the presumption that the transaction to sell the asset or transfer the liability takes place either in the principal market for the asset or liability, or in the absence of a principal market, in the most advantageous market for the asset or liability. The principal or the most advantageous market must be accessible by the Group. The fair value of an asset or a liability is measured using the assumptions that market participants would use when pricing the asset or liability, assuming that market participants act in their economic best interest.

The Group measures equity investments at fair value at the end of each reporting period. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value measurement is based on the presumption that the transaction to sell the asset or transfer the liability takes place in the principal market for the asset or liability or in the most advantageous market for the asset or liability when a principal market is

absent. The principal or the most advantageous market must be accessible to by the Group. The fair value of an asset or a liability is measured using the assumptions that market participants would use when pricing the asset or liability, assuming that market participants act in their economic best interest.

A fair value measurement of a non-financial asset takes into account a market participant's ability to generate economic benefits by using the asset in its highest and best use or by selling it to another market participant that would use the asset in its highest and best use.

The Group uses valuation techniques that are appropriate in the circumstances and for which sufficient data and other supporting information are available to measure fair value, giving priority to the use of relevant observable inputs, and using unobservable inputs only when observable inputs are unavailable or not feasible to obtain.

All assets and liabilities for which fair value is measured or disclosed in the financial statements are categorized within the fair value hierarchy, described as follows, based on the lowest level input that is significant to the fair value measurement as a whole:

Level 1 – Quoted (unadjusted) market prices in active markets for identical assets or liabilities

Level 2 – Valuation techniques for which the lowest level input that is significant to the fair value measurement is directly or indirectly observable

Level 3 – Valuation techniques for which the lowest level input that is significant to the fair value measurement is unobservable

For assets and liabilities that are recognized in the financial statements on a recurring basis, the Group determines whether transfers have occurred between levels in the hierarchy by reassessing categorization at the end of each reporting period.

33. Significant accounting judgments and estimates

The preparation of financial statements requires management to make judgments, estimates and assumptions that affect the amounts and disclosures of revenues, expenses, assets and liabilities, and the disclosure of contingent liabilities, at the balance sheet date. However, uncertainty about these assumptions and estimates could result in outcomes that could require a material adjustment to the carrying amounts of the assets or liabilities affected in the future.

Judgments

In the process of applying the Group's accounting policies, management has made the following judgments which have significant effect on the financial statements:

Business model

The classification of financial assets at initial recognition depends on the business model of the Group's management of financial assets. When judging the business model, the Group considers the methods including enterprise evaluation and reporting of financial asset performance to key management personnel, risks affecting financial asset performance and its anagement method and the way in which related business managers get paid. When evaluating whether to take contract cash flow as the goal, the Group needs to analyze and judge the reasons, time, frequency and value of the sale of financial assets before the due date.

Contract cash flow characteristics

The classification of financial assets at initial recognitions depends on the contractual cash flow characteristics of the financial assets. It is necessary to determine whether the contractual cash flow is only for the payment of principal and interest based on outstanding principal, including correction of the time value of money during the evaluation, it is necessary to determine whether there is a significant difference compared to the benchmark cash flow. For financial assets that include prepayment characteristics, it is necessary to determine whether the fair value of the prepayment characteristics is very small, etc.

Uncertainty of accounting estimates

The crucial assumptions of significant accounting estimates in future and other crucial sources of estimated uncertainty, which may result in the significant adjustments to the book value of the subsequent accounting period, are as the following:

Impairment of financial instruments

The Group uses the expected credit loss model to assess the impairment of financial instruments. The application of the expected credit loss model requires significant judgments and estimates. All reasonable and valid information must be considered, including forward-looking information. In making these judgments and estimates, the Group infers the expected changes in the credit risk of the debtor based on historical repayment data combined with economic policies, macroeconomic indicators, industry risks and other factors. Different estimates may affect the provision for impairment losses. The provision for impairment losses may not be equal to the actual amount of future impairment losses.

Impairment of non-current assets other than financial assets (goodwill excluded)

The Group assesses at each reporting date whether there is an indication that non-current assets other than financial assets may be impaired. If there is any sign of possible assets impairment, the assets concerned should be subject to impairment test. When the carrying amount of an asset or the relevant assets group exceeds its recoverable amount which is the higher one of the net amount of the fair value of the asset minus the disposal expenses and the present value of the expected future cash flow of the asset, the asset is considered impaired. The fair value minus the disposal expenses is determined by reference to the recent market transactions price or observed market price less any directly attributable expenditure for disposing. When making an estimate of the present value of the future cash flow of an asset, the Group should estimate the future cash flows of the asset or the relevant assets group, with the appropriate discount rate selected to reflect the present value of the future cash flows.

Fair value of unlisted equity investments

For unlisted equity instrument investments, several valuation models are used to estimate the fair value. This requires the Group to make estimates of unobservable market parameters such as price-to-book ration, discount rate, sustainable growth rate, asset price index, etc., and is therefore uncertain.

Development expenditures

When determining the capitalization amount, management should make assumptions such as the expected cash flows of the assets related, the applicable discount rate and expected benefit period.

Deferred tax assets

The Group should recognize the deferred income tax assets arising from all the existing unutilized tax deficits and deductible temporary differences to the extent of the amount of the taxable income which it is most likely to obtain and which can be deducted from the deductible temporary differences. Enormous accounting judgments, as well as the tax planning are compulsory for

management to estimate the time and amount of prospective taxable profits and thus determine the appropriate amount of the deferred tax assets concerned.

Warranty

The Group provides warranties on automobile and undertakes to repair or replace items that fail to perform satisfactorily based on certain pre-determined conditions. Factors that influence estimation of related warranty claim include: 1) renewal of laws and regulations; 2) quality promotion of Group products; 3) change of parts and labour cost. In general, the Group records warranty based on selling volume and estimated compensatory unit warranty cost, deduction multi-agreed compensation from suppliers. As at balance sheet day, the Group launches retrospective analysis on warranty carrying amount in consideration of accrual warranty payment during relative warranty period, and recent trends of product renovation and replacement, and further adjustment if necessary. Any increase or decrease in the provision would affect profit or loss in future years.

Depreciation and amortization

The Group's management determines the estimated useful lives and residual value of fixed assets and intangible assets. This estimate is based on the historical experience of actual useful lives of fixed assets and intangible assets of similar nature and functions. Management will increase the depreciation and amortization charges where useful lives are less than previously estimated.

34. Changes in accounting policies and accounting estimates

(1) Changes in significant accounting policies

 $\sqrt{\text{applicable}} \square \text{not applicable}$

The new lease criteria will be implemented for the first time since 2021

On December 7, 2018, the Ministry of Finance revised and issued accounting standards for Business Enterprises No. 21 - leasing (CK [2018] No. 35). According to the requirements of the Ministry of finance, enterprises listed at home and abroad and enterprises listed abroad and preparing financial statements using international financial reporting standards or accounting standards for business enterprises shall be implemented as of January 1, 2019; Other enterprises that implement the accounting standards for business enterprises shall be implemented as of January 1, 2021. Due to the revision of the above accounting standards for business enterprises, the company needs to adjust the relevant accounting policies originally adopted.

According to the time specified by the Ministry of finance, the company will implement the new leasing standards from January 1, 2021.

The impact of the implementation of the new lease standards on the financial statements of 2021 is as follows:

The company's government subsidy accounting policy is changed from the total amount method to the net amount method $\sqrt{applicable}$ \Box not applicable

Contents and reasons for changes in accounting policies	Procedures for examination and approval	Remarks
In May 2017, the Ministry of Finance issued the notice on Issuing and revising the accounting standards for Business Enterprises No. 16 - government subsidies (CK [2017] No. 15), which revised the accounting standards for Business Enterprises No. 16 - government subsidies. According to the provisions of the revised accounting standards for Business Enterprises No. 16 - government subsidies, Government subsidies can be accounted by total amount method and net amount method. Before the change of accounting policy, the company adopts the total amount method for accounting of government subsidies. In order to make the company's accounting more accurately, objectively and fairly reflect the company's financial status and operating results, the company's government subsidy accounting policy is changed from the total amount method to the net amount method from January 1, 2021.	Adopted at the 16th meeting of the 8th board of directors of the company	The reclassification adjustment of the accounting policy change to different accounts will not have an impact on the company's net assets, net profit and cash flow

Other instructions:

For this accounting policy change, the company needs to adopt the retroactive adjustment method for the government subsidies obtained before January 1, 2021, adjust the opening balance of relevant items in the financial statements and present the comparable data disclosed in the previous period according to the impact of the accounting policy change; The reclassification adjustment of the accounting policy change to different subjects will not have an impact on the company's net assets, net profit and cash flow, and will not damage the interests of the company and shareholders.

The main impact of the change in the accounting treatment method of government subsidies on the financial statements is as follows:

(2) Changes in significant accounting estimates

The provision proportion of staff education funds shall be changed from 1.5% to 5%

 $[\]sqrt{\text{applicable}} \square \text{not applicable}$

Contents and reasons for changes in accounting policies	Procedures for examination and approval	Time point of application	Remarks
According to the notice of the Ministry of Finance and the State Administration of Taxation on the pre Tax Deduction Policy of enterprise employee education funds (CS [2018] No. 51), from January 1, 2018, the part of the enterprise's employee education expenditure that does not exceed 8% of the total wages and salaries is allowed to be deducted when calculating the taxable income of enterprise income tax; The excess part is allowed to be carried forward and deducted in subsequent tax years. The company's staff education fund has been subject to the withdrawal standard of 1.5%. In order to actively respond to the call of the CPC Central Committee to "implement the strategy of strengthening the country with talents", the human resources department of the company has created a learning organization, strengthened the training of human resources of the company, and encouraged employees to continuously improve their ability to perform their duties, the professional training allowance has been added to the employee salary structure. According to the calculation of the amount of annual professional training allowance, it is necessary to withdraw employee education funds according to 5% of the total annual salary, and the withdrawal proportion of employee education funds needs to be changed from 1.5% to 5%.	Adopted at the 16th meeting of the 8th board of directors of the company	Implemented from January 1, 2021	The proportion of employee education funds was changed from 1.5% to 5%, and the annual increase of employee education funds was about 96 million yuan.

VI. TAXES

1. Main taxes and tax rates

Accounts payable	24,517,099,039.98	23,118,793,794.42
Other payables	3,643,263,561.28	4,475,215,625.98
Long-term loan	654,300,000.00	955,300,000.00
Non current liabilities due within one year	328,905,578.01	100,000,000.00
Total	56,881,825,688.23	46,801,323,973.86

2. Transfer of financial assets

The transferred financial assets that entirely derecognized but continuing involved

As at June 30, 2021, the book value of the bank acceptance bill that the Group has endorsed to the supplier to settle accounts payable is RMB 949,918,527.77 (December 31, 2020: RMB 5,093,467,680.36). On June 30, 2021, its maturity date is 1 to 6 months.

According to the relevant provisions of the "Negotiable Instruments Law", if the accepting bank refuses to pay, its holder has the right to recourse against the Group ("continued involvement"). The Group believes that the Group has transferred almost all of its risks and rewards, and therefore, terminates the confirmation of the book value of the settlement accounts payable and the related accounts payable. The maximum loss and undiscounted cash flow of continuing involvement and repurchase are equal to its book value. The Group believes that continued involvement in fair value is not significant.

In the first half of 2021, the Group did not recognize gains or losses on its transfer date. The Group shall continue to be involved in the proceeds or expenses of the year in which the recognition of financial assets has been terminated and the cumulative recognition thereof. Endorsements occur roughly and evenly during the year.

3. Risks of financial instruments

The Group faces risks of various financial instruments in its daily activities, mainly including credit risk, liquidity risk and market risk (including exchange rate risk, interest rate risk and price risk). The main financial instruments of the Group include monetary funds, equity investments, loans, bills receivable, accounts receivable, bills payable, accounts payable, etc. The risks associated with these financial instruments and the risk management strategies adopted by the Group to reduce these risks are described below.

The Group has formulated risk management policies to identify and analyze the risks faced by the Group, set appropriate risk acceptance levels and design corresponding internal control procedures to monitor the Group's risk levels. The Group will periodically re-examine these risk management policies and related internal control systems to adapt to changes in market conditions or the Group's operating activities. The internal audit department also regularly and irregularly checks whether the implementation of the internal control system complies with the risk management policy.

Credit risk

The Group only deals with recognized and reputable customers. In accordance with the Group's policy, a credit review is required for all customers who require credit transactions. In addition, the Group continuously monitors the balance of accounts receivable to ensure that the Group does not face significant bad debt risk. For transactions that are not settled with the relevant business unit's bookkeeping standard currency, the Group does not provide credit transaction conditions unless specifically approved by the Group's credit control department.

Since the counterparties of monetary funds and bank acceptance receivables are reputable banks with higher credit ratings, these financial instruments have lower credit risk.

With respect to credit risk arising from the other financial assets of the Group, which comprise accounts receivable, other receivables, dividend receivables and certain derivatives financial instruments, the Group's exposure to credit risk arising from default of the counterparty, with a maximum exposure equal to the carrying amount of these instruments, listed as book value of financial assets in consolidated financial statements. In 2020, there was no credit risk arising from financial guarantee.

Since the Group only trades with approved and reputable customers, there is no need for collateral. Credit risk is centralized and managed according to customers. As at the balance sheet date, the Group has a specific concentration of credit risks. 56.09% of the Group's accounts receivable (December 31, 2020:61.26%) originated from the top five customers with the balance of accounts receivable. The Group does not hold any collateral or other credit enhancements for the balance of accounts receivable.

Judgment criteria for significant increase in credit risk

The group evaluates on each balance sheet date whether the credit risk of the relevant financial instruments has increased significantly since the initial recognition. In determining whether credit risk has increased significantly since the initial recognition, the group considers that reasonable and evidence-based information can be obtained without unnecessary additional cost or effort, including qualitative and quantitative analysis based on the group's historical data, external credit risk ratings and forward-looking information. Based on a single financial instrument or a portfolio of financial instruments with similar credit risk characteristics, the group compares the default risk of financial instruments on the balance sheet date with the default risk on the initial confirmation date to determine the change of default risk of financial instruments during their expected duration.

When one or more of the following quantitative or qualitative criteria are triggered, the group believes that the credit risk of financial instruments has significantly increased:

- the quantitative criterion is that the default probability of the remaining duration on the report date increases by more than a certain percentage compared with the initial confirmation;
- qualitative criteria mainly include material adverse changes in the operating or financial situation of the debtor, early warning customer list, etc.;

Definition of assets that have incurred credit impairment

In order to determine whether credit impairment occurs, the group adopts a definition standard consistent with the internal credit risk management objectives for relevant financial instruments, and considers both quantitative and qualitative indicators. The group mainly takes the following factors into consideration when evaluating whether the debtor has credit impairment:

- significant financial difficulties of the issuer or debtor;
- debtor breaches the contract, such as default or overdue payment of interest or principal;
- the creditor gives the debtor concessions that the debtor would not have made under any other circumstances for economic or contractual reasons related to the debtor's financial difficulties;
- the debtor is likely to go bankrupt or undergo other financial restructuring;
- the financial difficulties of the issuer or debtor result in the disappearance of an active market for the financial asset;
- purchase or source a financial asset at a substantial discount that reflects the fact that a credit loss has occurred.

The credit impairment of financial assets may be caused by the joint action of multiple events, but not by events that can be identified separately.

A parameter for measuring expected credit losses

According to whether the credit risk has significantly increased and whether the credit impairment has occurred, the group measures the impairment provision for different assets with the expected credit loss of 12 months or the whole duration respectively. The key parameters of expected credit loss measurement include default probability, default loss rate and default risk exposure. The group takes into account the quantitative analysis and forward-looking information of historical statistical data (such as counterparty rating, guarantee method and types of collateral, repayment method, etc.) to establish default probability, default loss rate and default risk exposure models.

The relevant definition is as follows:

• probability of default is the probability that the debtor will not be able to meet its repayment obligations in the next 12 months or throughout the remaining period. The default probability of the group is adjusted based on the results of the historical credit loss model and forward-looking information is added to reflect the default probability of the debtor in the current macroeconomic environment.

• the default loss rate refers to the group's expectation of the extent of losses from default risk exposure. Default loss rates also vary depending on the type of counterparty, the type and priority of recourse, and the collateral. The default loss rate is the percentage of the risk exposure loss at the time of default, calculated on the basis of the next 12 months or the whole duration;

• default exposure is the amount that should be paid to the group at the time of default over the next 12 months or throughout the remaining duration.

The assessment of a significant increase in credit risk and the calculation of expected credit losses involve forward-looking information. Through the analysis of historical data, the group identifies the key economic indicators that affect the credit risks and expected credit losses of each business type.

Liquidity risk

The Group adopts cycle liquidity planning instrument to manage capital shortage risks. The instrument takes into consideration the maturity date of financial instruments plus estimated cash flow from the Group's operations.

The Group's objective is to maintain a balance between continuity of funding and flexibility and sufficient cash to support operating capital through financing functions by the use of bank loans, debentures, etc.

Market risk

Interest rate risk

The Group's revenue and operating cash flows are seldomly influenced by the interest fluctuation. As at 30 June 2021, the Group's loans are bearing fixed interest rate and the Group is not hedging the risk currently.

Foreign currency risk

The Group's exposures to fluctuation in foreign currency exchange rate mainly arise from operating activities where transactions are settled in currencies other than the units' functional currency and net investment to offshore subsidiary.

In 30 June, 2021, the Group only has limited transactional currency exposures of its total revenue that is valued in currencies other than the units' functional currency. Since most of the Group's businesses are operated in China mainland, the estimated influence of fluctuation of foreign currency is insignificant; therefore, the Group hasn't carried out large amount of hedging to reduce the risk.

Equity instruments investment price risk

The Group is exposed to equity price risk arising from individual equity investments classified as transactional financial investments (Note VII 2) as at 30 June 2021. The Group's listed investments are listed on the Shanghai and Shenzhen stock exchanges and valued at quoted market prices at the end of the reporting period. The following table demonstrates the sensitivity to every 5% change (based on the carrying amount as at the end of reporting period) in the Group's net profit and fair value of the equity investments, with all other variables held constant, based on their carrying amounts at the end of the reporting period.

	Carrying amount of equity investments	Change in fair value	Increase/(decrease) in equity
2021.6.30			
Shanghai- Transactional financial assets	163,778,100.00	5%	6,960,569.25
Shanghai- Transactional financial assets	163,778,100.00	-5%	(6,960,569.25)
2020.12.31			
Shanghai- Available for sale	180,929,400.00	5%	7,689,499.50
Shanghai- Available for sale	180,929,400.00	-5%	(7,689,499.50)

4. Capital management

The main goal of the Group's capital management is to ensure that the ability of continuous operation, and maintain a healthy capital ratios in order to support business development, and to maximize shareholder value.

The Group manages the capital structure and adjusts it with the change of economy trend and the risk feature of the assets. To maintain or adjust the capital structure, the Group can rectify dividend distribution, return capital to shareholders or issue new shares. The Group is not subject to external mandatory capital requirements constraints. The goal, principle and procedure of capital management stay the same in 2020 and 30, June 2021.

The Group's leverage ratio on the balance sheet date is as follows:

30 June 2021	31 December 2020
58.38%	54.78%

2. Fair value valuation

The management has assessed the monetary funds, notes receivable and accounts receivable, other receivables, short-term loans, other payables, bills payable and accounts payable. The fair value is equal to the book value because the remaining period is not long.

The fair value of financial assets and financial liabilities is determined by the amount of voluntarily exchange of assets or debt settlement between the parties to the transaction in a fair transaction, rather than the amount of money that is forced to sell or liquidate.

Long-term borrowings and long-term borrowings due within one year are determined using the discounted future cash flow method to determine the fair value, using the market yields of other financial instruments with similar contractual terms, credit risk and remaining maturity as the discount rate. On June 30, 2021 the risk assessment of long-term borrowings and long-term borrowings due within one year was not significant.

The equity instruments listed by the Company include unrestricted ordinary shares and restricted shares. The unrestricted ordinary shares investment determines the fair value by market quotation, and the restricted stock investment uses the discounted valuation model to estimate the fair value. We believe that the fair value and its changes estimated by valuation techniques are reasonable and are also the most appropriate value on the balance sheet date.

XIV. Commitments and Contingencies

1. Significant commitments

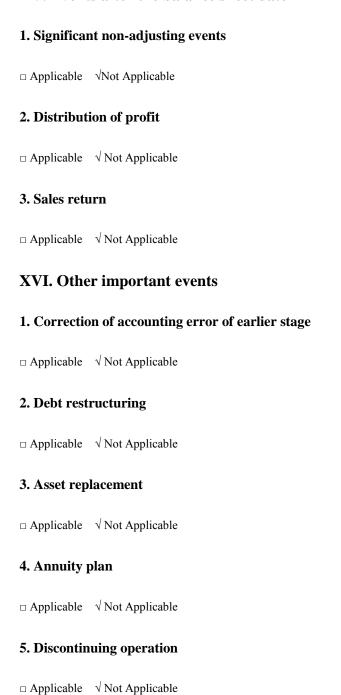

Investment commitment

By June 30, 2021, the group has no investment commitment that has been signed but not yet fully fulfilled.

2. Contingencies

By June 30, 2021, the company has no significant contingencies that need to be published.

XV. Events after the balance sheet date

6. Information on business branch

Identify business branch of the group according to internal organization structure, management requirements, internal reporting rules, and identify the report and information disclosed of the brand based on the identified branch.

Identify business branch of the group according to internal organization structure, management requirements, internal reporting rules,

and identify the report and information disclosed of the brand based on the identified branch.

business branch refers to the component of the group that meets the following conditions:

- (1) the component has income and expenditure incurred in routine activities;
- (2) the management of the company regularly evaluates the operation performance of the component to decide the company's resource distribution and evaluate its overall performance
- (3) The group receives related accounting information on the financial situation, operation performance and cash flow.

If two or more components have similar economic features and meet the conditions, they should be consolidated into one branch. Income and profit of the group consists of automobile manufacturing and domestic sales. Main asset of the group is in China. The management of the group evaluates the performance of the group as a whole. Thus, report of the branch is not included in this year's report.

XVII. Notes to the main items of the parent company's financial statements

1. Account Receivables

(1) The aging analysis is as follow:

In RMB Yuan

Account receivable age	Ending	Beginning
Within 1 year	4,108,837,120.27	3,773,918,017.07
1 to 2 years	55,434,711.32	554,825,636.86
